DT SERIES, 5 & 12 VDC POWERED

DC Current Transducers

The DT Series of Temperature Compensated DC Current Transducers is ideal for energy management system inputs where the controller is designed to accept 333 mV signals, commonly found in power monitoring applications. Other output options available are a 0–5 VDC signal used in building energy management systems or a 0–10 VDC signal seen more often in industrial controllers. Additionally, this series features a patented method that improves the sensor accuracy as the ambient temperature changes. The sensor output is automatically adjusted as the temperature increases or decreases, eliminating one of the biggest issues with Hall effect based products.

DC Current Transducer Applications

Photovoltaic Panel Output Measurement

- The sensor output rises and falls as the panel produces more or less power.

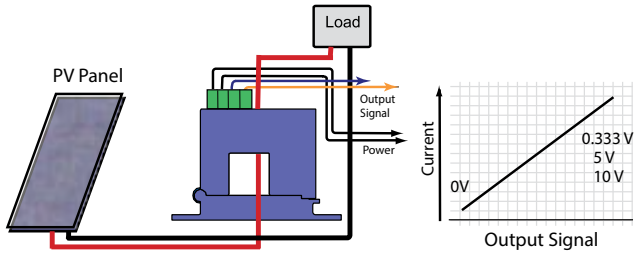

DC Motors

- Detect jams and overloads.
- Provide early notification of impending bearing failure.

Electrical Heaters

- Detect open or shorted elements quickly.

Photovoltaic Panel Output Measurement

The DT sensor will produce a signal directly proportional to the current produced by the panel or string of panels, with an output to match the controller being used.

DC Current Transducer Features

Voltage Output

- 333 mVDC, 5 or 10 VDC proportional to DC current.
- Compatible with many monitoring systems.

5 VDC Powered

- Use with data collection systems.
- Available with 333 mVDC output.

12 VDC Powered

- Available with 0.333, 5 or 10 VDC output.

Ranges to Suit Your Needs

- 0–50 A DC.
- 0–100 A DC.

Temperature Compensated

- Remains accurate with rise or fall of ambient temperature.

Built-in Mounting Feet

- Simple, two-screw panel mounting or attach with DIN rail brackets (included).*

Split-core Case

- Open to snap the sensor over existing conductor; no need to disconnect the load to install.

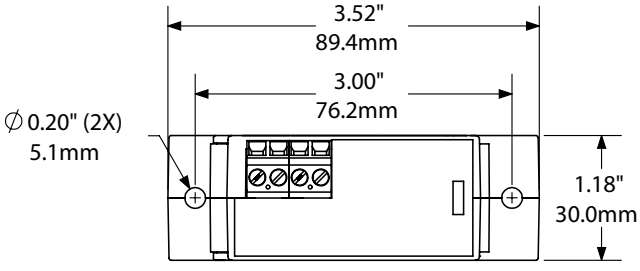

Designed for UL/cUL and CE Approval

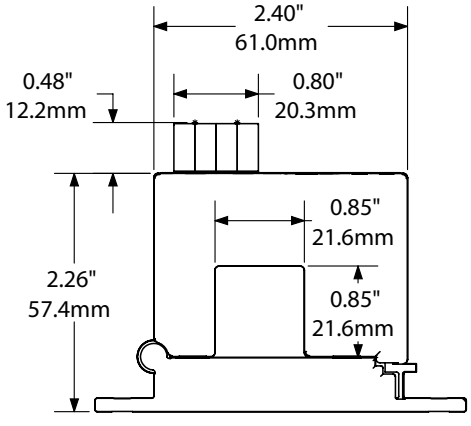

- Accepted worldwide.
