# PROGRAMMABLE CONTROLLER

PCA1

INSTRUCTION MANUAL

Shinko

Preface

Thank you for purchasing our programmable controller PCA1. This manual contains instructions for the mounting, functions, operations and notes when operating the PCA1. To prevent accidents arising from the misuse of this controller, please ensure the operator receives this manual

Abbreviations used in this manual

Abbreviation	Term
PV	Process variable
SV	Desired value
MV	Manipulated variable
OUT1	Control output OUT1
OUT2	Control output OUT2
AT	Auto-tuning

Characters used in this manual (⬚: No character is indicated)

Indication	ˉ	▯	ı	²	³	⁴	⁵	⁶	⁷	▯	⁹	⊏	⸅	
Number, ℃/℉	-1	0	1	2	3	4	5	6	7	8	9	℃	℉	
Indication	ᴿ	⊓	ᵇ	ᶜ	ᵈ	ᴱ	ᶠ	ᴳ	ᴴ	ı	⌐	ᴷ	ᴸ	ᴹ
Alphabet	A		B	C	D	E	F	G	H	I	J	K	L	M
Indication	ᴺ	ᵒ	ᴾ	ᵠ	ᴿ	⌐	⌐	⌐	⌐	⌐	⌐	⌐	⌐	
Alphabet	N	O	P	Q	R	S	T	U	V	W	X	Y	Z	

Notes

• This instrument should be used in accordance with the specifications described in the manual.
  If it is not used according to the specifications, it may malfunction or cause a fire.
• Be sure to follow the warnings, cautions and notices. If they are not observed, serious injury or malfunction may occur.
• The contents of this instruction manual are subject to change without notice.
• Care has been taken to ensure that the contents of this instruction manual are correct, but if there are any doubts, mistakes or questions, please inform our sales department.
• This instrument is designed to be installed through the control panel. If it is not, measures must be taken to ensure that the operator cannot touch power terminals or other high voltage sections.
• Any unauthorized transfer or copying of this document, in part or in whole, is prohibited.
• Shinko Technos Co., Ltd. is not liable for any damage or secondary damage(s) incurred as a result of using this product, including any indirect damage.

Safety Precautions (Be sure to read these precautions before using our products.)

The safety precautions are classified into categories: "Warning" and "Caution". Depending on circumstances, procedures indicated by ⚠ Caution may result in serious consequences, so be sure to follow the directions for usage.

⚠ **Warning**   Procedures which may lead to dangerous conditions and cause death or serious injury, if not carried out properly.

⚠ **Caution**   Procedures which may lead to dangerous conditions and cause superficial to medium injury or physical damage or may degrade or damage the product, if not carried out properly.

⚠ Warning

- To prevent an electrical shock or fire, only Shinko or other qualified service personnel may handle the inner assembly.
- To prevent an electrical shock, fire or damage to the instrument, parts replacement may only be undertaken by Shinko or other qualified service personnel.

⚠ Safety Precautions

- To ensure safe and correct use, thoroughly read and understand this manual before using this instrument.
- This instrument is intended to be used for industrial machinery, machine tools and measuring equipment. Verify correct usage after purpose-of-use consultation with our agency or main office. (Never use this instrument for medical purposes with which human lives are involved.)
- External protection devices such as protective equipment against excessive temperature rise, etc. must be installed, as malfunction of this product could result in serious damage to the system or injury to personnel. Proper periodic maintenance is also required.
- This instrument must be used under the conditions and environment described in this manual. Shinko Technos Co., Ltd. does not accept liability for any injury, loss of life or damage occurring due to the instrument being used under conditions not otherwise stated in this manual.

⚠ Caution with Respect to Export Trade Control Ordinance

To avoid this instrument from being used as a component in, or as being utilized in the manufacture of weapons of mass destruction (i.e. military applications, military equipment, etc.), please investigate the end users and the final use of this instrument. In the case of resale, ensure that this instrument is not illegally exported.

1. Installation Precautions

⚠ Caution

This instrument is intended to be used under the following environmental conditions (IEC61010-1): Overvoltage category Ⅱ, Pollution degree 2
Ensure the mounting location corresponds to the following conditions:

- A minimum of dust, and an absence of corrosive gases
- No flammable, explosive gases
- No mechanical vibrations or shocks
- No exposure to direct sunlight, an ambient temperature of 0 to 50℃ (32 to 122℉) that does not change rapidly, and no icing
- An ambient non-condensing humidity of 35 to 85 %RH
- No large capacity electromagnetic switches or cables through which large current is flowing
- No water, oil or chemicals or where the vapors of these substances can come into direct contact with the unit
- Please note that the ambient temperature of this unit – not the ambient temperature of the control panel – must not exceed 50℃ (122℉) if mounted through the face of a control panel, otherwise the life of the electronic components (especially electrolytic capacitors) may be shortened.

Note: Avoid setting this instrument directly on or near flammable material even though the case of this instrument is made of flame-resistant resin.

2. Wiring Precautions

⚠ Caution

- Do not leave wire remnants in the instrument, as they could cause a fire or malfunction.
- Use the solderless terminal with an insulation sleeve in which the M3 screw fits when wiring the instrument.
- The terminal block of this instrument is designed to be wired from the left side. The lead wire must be inserted from the left side of the terminal, and fastened with the terminal screw.
- Tighten the terminal screw using the specified torque. If excessive force is applied to the screw when tightening, the terminal screw or case may be damaged.
- Do not pull or bend the lead wire on the terminal side when wiring or after wiring, as it could cause malfunction.
- This instrument does not have a built-in power switch, circuit breaker and fuse. It is necessary to install a-power switch, circuit breaker and fuse near the controller.
  (Recommended fuse: Time-lag fuse, rated voltage 250 V AC, rated current 2 A)
- For the grounding wire, use a thick wire (1.25 - 2.0 mm^2).
- For a 24 V AC/DC power source, do not confuse polarity when using direct current (DC).
- Do not apply a commercial power source to the sensor which is connected to the input terminal nor allow the power source to come into contact with the sensor.
- Use a thermocouple and compensating lead wire according to the sensor input specifications of this controller.
- Use the 3-wire RTD according to the sensor input specifications of this controller.
- For DC voltage input, (+) side input terminal number of 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC differs from that of 0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC.

Terminal Number	DC Voltage Input
⑯ and ⑲	0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC
⑱ and ⑲	0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC

- When using a relay contact output type, externally use a relay according to the capacity of the load to protect the built-in relay contact.
- When wiring, keep input wires (thermocouple, RTD, etc.) away from AC power sources or load wires.

3. Operation and Maintenance Precautions

⚠ Caution

- It is recommended that AT be performed on the trial run.
- When connecting USB communication cable (CMB-001) to the console connector, connect the cable after power is turned OFF.
- *Never* turn the power ON or OFF, while USB communication cable (CMB-001) is connected to the console connector.
- Do not touch live terminals. This may cause electrical shock or problems in operation.
- Turn the power supply to the instrument OFF before retightening the terminal or cleaning.
  Working on or touching the terminal with the power switched ON may result in severe injury or death due to electrical shock.
- Use a soft, dry cloth when cleaning the instrument.
  (Alcohol based substances may tarnish or deface the unit.)
- As the display section is vulnerable, be careful not to put pressure on, scratch or strike it with a hard object.

Contents

1. Model

1.1 Model

PCA1	□	□	0-	□	□	□		
Control output OUT1	R							Relay contact output
	S							Non-contact voltage output
	A							Direct current output
Power supply voltage		0						100 to 240 V AC
		1						24 V AC/DC
Input			0					Multi-range (*1)
Option 1 (*2)				0				Option 1 not needed.
				1			C	Serial communication RS-232C
				2			C5	Serial communication RS-485
				3			TS	Time signal output
				4			C+TS	Serial communication RS-232C+Time signal output
				5			C5+TS	Serial communication RS-485+Time signal output
Option 2 (*2)					0			Option 2 not needed.
					1		TA	Transmission output (4 to 20 mA DC)
					2		TV	Transmission output (0 to 1 V DC)
Option 3 (*2)						0		Option 3 not needed.
						1	DR (*3)	Heating/Cooling control output OUT2 Relay contact output
						2	DS (*3)	Heating/Cooling control output OUT2 Non-contact voltage output
						3	DA (*3)	Heating/Cooling control output OUT2 Direct current output

Factory default values of Event output are shown below.

　EV1 : Pattern end output

　EV2 : No event

　EV3 : Alarm output, High limit alarm

　EV4 : Alarm output, Low limit alarm

(*1) Thermocouple, RTD, Direct current or DC voltage can be selected by keypad.

(*2) Only one option can be selected from Option 1, Option 2 and Option 3 respectively.

(*3) If Heating/Cooling control (DR, DS or DA option) is ordered, Event output EV2 will be disabled.

1.2 How to Read the Model Label

The model label is attached to the left side of the case.
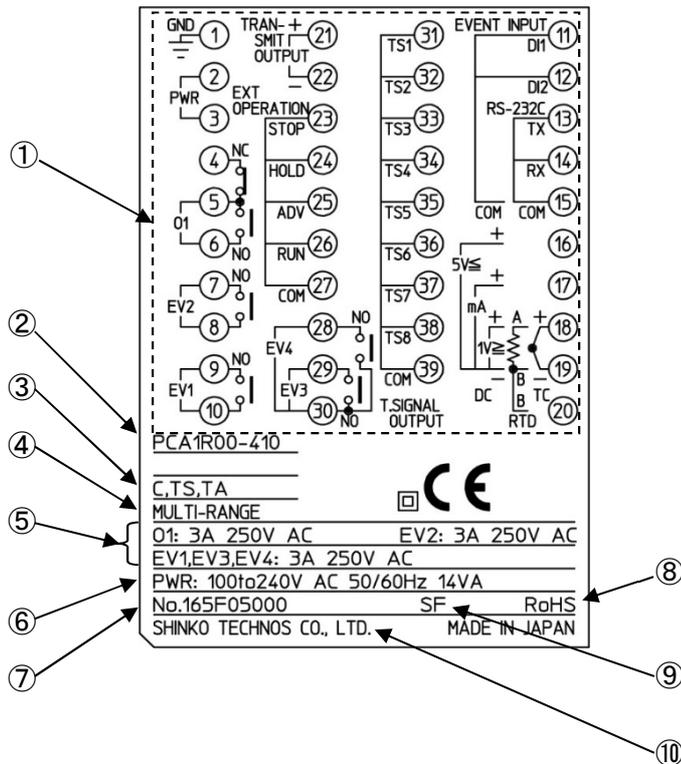

(Fig. 1.2-1)

No.	Description	Example
①	Terminal arrangement	Terminal arrangement of PCA1R00-410 (*)
②	Model	PCA1R00-410
③	Option	C+TS (Serial communication RS-232C+Time signal output)
		TA [Transmission output (4-20 mA DC)]
④	Input	MULTI-RANGE (Multi-range input)
⑤	Control output, Event output	O1: 3 A 250 V AC (Control output OUT1)
		EV1: 3 A 250 V AC (Event output EV1)
		EV2: 3 A 250 V AC (Event output EV2)
		EV3: 3 A 250 V AC (Event output EV3)
		EV4: 3 A 250 V AC (Event output EV4)
⑥	Power supply	100 to 240 V AC 50/60 Hz
	Power consumption	14 VA
⑦	Serial number	No. 165F05000
⑧	RoHS directive	RoHS directive compliant
⑨	UL recognized factory ID	SF: Fukuoka factory
⑩	Manufacturer	SHINKO TECHNOS CO., LTD.

(*) Terminal arrangement diagram differs depending on the model.

2. Name and Functions of Controller
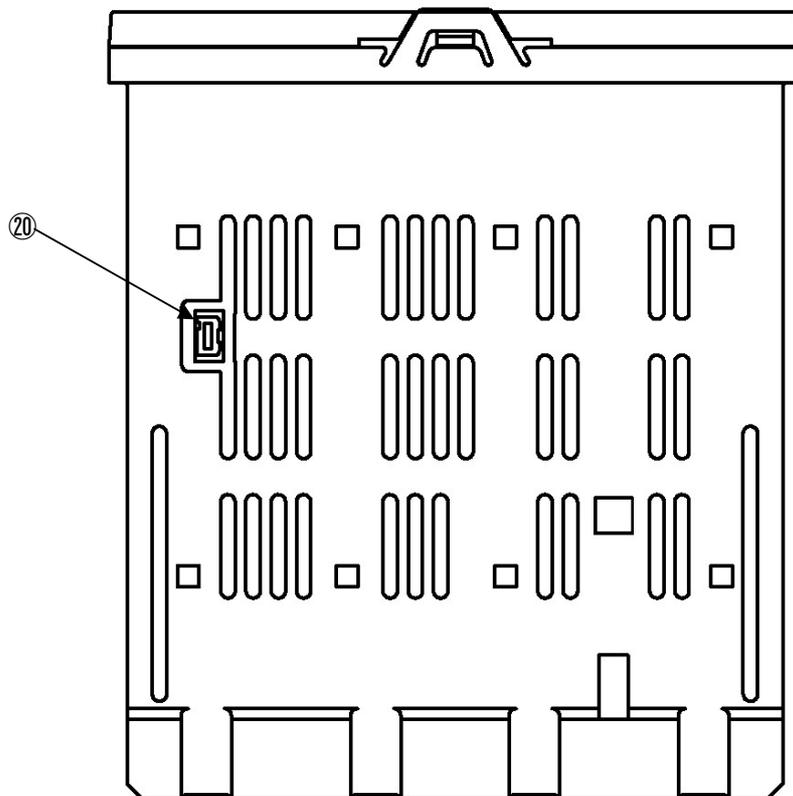

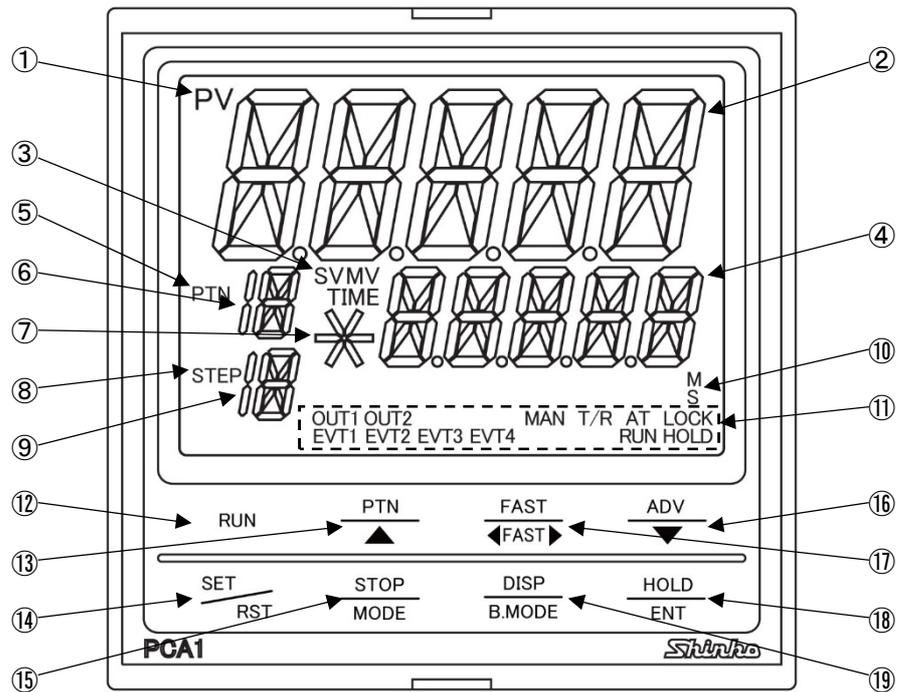

(Fig. 2-1)

Action Indicators, Display

No.	Name	Description
①	**PV indicator**	Backlight: Red/Green/Orange Lit when PV is indicated in RUN mode.
②	**PV Display**	Backlight: Red/Green/Orange Indicates PV in RUN mode. Indicates setting characters in setting mode.
③	**SV indicator**	Backlight: Green Lit when SV is indicated on the SV/MV/TIME Display. Retains indicator status at power OFF.
	MV indicator	Backlight: Green Lit when OUT1 MV is indicated on the SV/MV/TIME Display. Flashes when OUT2 MV is indicated on the SV/MV/TIME Display. Retains indicator status at power OFF.
	TIME indicator	Backlight: Green Lit when TIME is indicated on the SV/MV/TIME Display. Retains indicator status at power OFF.
④	**SV/MV/TIME Display**	Backlight: Green Indicates SV, MV or TIME in RUN mode. Retains display indication at power OFF. Indicates the set values in setting mode.
⑤	**PTN indicator**	Backlight: Orange Lit when the pattern number is indicated.
⑥	**PTN Display**	Backlight: Orange Indicates the pattern number. If 'Holding' is selected in [Step SV Hold function when program ends], flashes when program control ends.
⑦	**PROFILE indicator**	Backlight: Green When program control is performing, the indicator lights up depending on the program setting as follows. ╱ ： Lit when step SV is rising. ╶╴ ： Lit when step SV is constant. ╲ ： Lit when step SV is falling.
⑧	**STEP indicator**	Backlight: Orange Lit when the step number is indicated.
⑨	**STEP Display**	Backlight: Orange Indicates the step number. The step number flashes during Wait action. Indicates $\overset{M}{\sqcap}$ during Manual control.
⑩	**Time unit indicator**	Backlight: Green When the SV/MV/TIME Display indicates TIME, the following is shown depending on the selection in [Step time unit]. M: Lit when 'Hours:Minutes' is selected in [Step time unit]. S: Lit when 'Minutes:Seconds' is selected in [Step time unit].

Action Indicator (Backlight: Orange)

No.	Name	Description
⑪	OUT1	Lit when control output OUT1 is ON. For direct current output type, flashes corresponding to the MV in 125 ms cycles.
	OUT2	Lit when control output OUT2 (DR, DS or DA option) is ON. For direct current output type (DA option), flashes corresponding to the MV in 125 ms cycles.
	EVT1	Lit when Event output EV1 is ON.
	EVT2	Lit when Event output EV2 is ON.
	EVT3	Lit when Event output EV3 is ON.
	EVT4	Lit when Event output EV4 is ON.
	MAN	Lit when Manual control is performing.
	T/R	Lit during Serial communication (C or C5 option) TX (transmitting) output.
	AT	Flashes during AT (Auto-tuning). Lit in AT standby when 'Multi mode' is selected in [AT mode].
	LOCK	Lit when 'Lock' is selected in [Set value lock].
	RUN	Lit during program control RUN. Flashes during Fixed value control.
	HOLD	Flashes during program control HOLD.

Key

No.	Name	Description
⑫	RUN key	Performs program control. Cancels HOLD during Program control HOLD.
⑬	PATTERN/UP key	PATTERN key: Selects program pattern number. UP key: Increases the numerical value in setting mode.
⑭	SET/RESET key	SET key: Moves to setting mode. RESET key: Moves to RUN mode.
⑮	STOP/MODE key	STOP key: Stops the program control, or cancels the pattern end output. MODE key: Switches or selects setting mode.
⑯	ADVANCE/DOWN key	ADVANCE key: During program control, interrupts performing step, and proceeds to the next step (ADVANCE function). DOWN key: Decreases the numerical value in setting mode.
⑰	FAST key	During program control, makes step time progress 60 times faster. In setting mode, makes the numerical value change faster.
⑱	HOLD/ENTER key	HOLD key: During program control, time progress pauses, and control continues with the SV at the given time (HOLD function). ENTER key: Registers the setting data, and moves to the next setting item.
⑲	DISPLAY/BACK MODE key	DISPLAY key: Switches the indication on the SV/MV/TIME Display. BACK MODE key: Moves back to the previous mode.

Console Connector

No.	Name	Description
⑳	Console connector	By connecting the USB communication cable (CMB-001, sold separately), the following operations can be conducted from an external computer, using the Console software SWC-PCA01M. • Reading and setting of SV, PID and various set values • Reading of PV and action status • Function change

3.3 Mounting to, and Removal from, the Control Panel

> # ⚠ Caution
>
> **As the case of the PCA1 is made of resin, do not use excessive force while tightening screws, or the mounting brackets or case could be damaged.**
> **The torque should be 0.12 N•m.**

3.3.1 Mounting the Unit

Mount the controller vertically to the flat, rigid panel to ensure it adheres to the Drip-proof/Dust-proof specification (IP66).

CAUTION:

If the horizontal close mounting is used for the controller, IP66 specification (Drip-proof/Dust-proof) may be compromised, and all warranties will be invalidated.

Mountable panel thickness: 1 to 8 mm

(1) Insert the controller from the front side of the control panel. (Fig. 3.3.1-1)
(2) Attach the mounting brackets by the slots at the top and bottom of the case, and secure the controller in place with the screws.
   The torque should be 0.12 N•m.

Up

Down
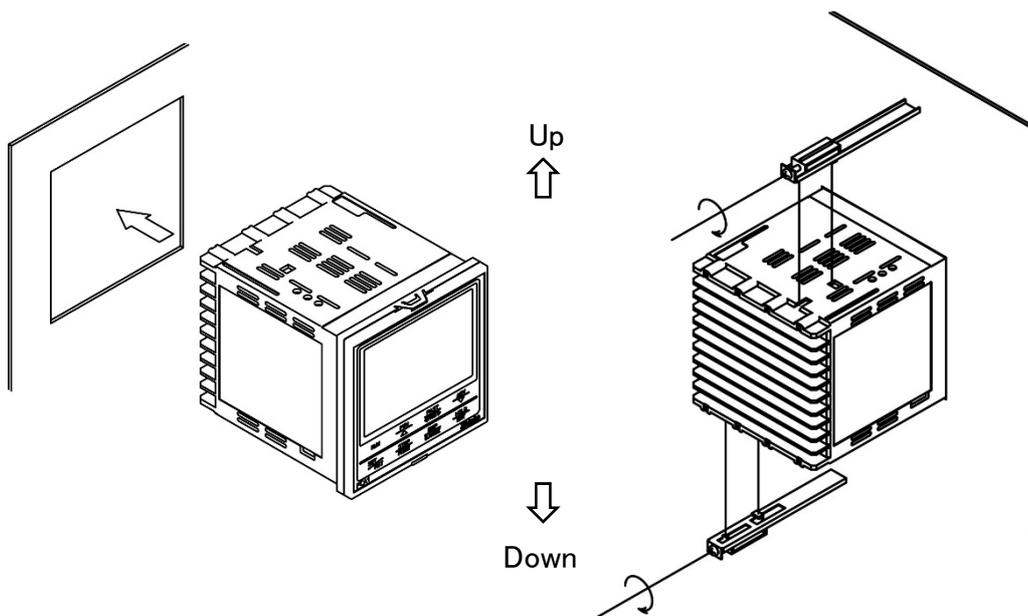

(Fig. 3.3.1-1)

3.3.2 Removing the Unit

(1) Turn the power to the unit OFF, and disconnect all wires before removing the unit.
(2) Loosen the screws of the mounting brackets, and remove the mounting brackets.
(3) Pull the unit out from the front of the control panel.

4. Wiring

⚠ Warning

Turn the power supply to the instrument off before wiring or checking.
Working on or touching the terminal with the power switched on may result in severe injury or death due to electrical shock.

⚠ Caution

• Do not leave wire remnants in the instrument, as they could cause a fire or malfunction.
• Use the solderless terminal with an insulation sleeve in which the M3 screw fits when wiring the instrument.
• The terminal block of this instrument is designed to be wired from the left side. The lead wire must be inserted from the left side of the terminal, and fastened with the terminal screw.
• Tighten the terminal screw using the specified torque. If excessive force is applied to the screw when tightening, the terminal screw or case may be damaged.
• Do not pull or bend the lead wire on the terminal side when wiring or after wiring, as it could cause malfunction.
• This instrument does not have a built-in power switch, circuit breaker and fuse. It is necessary to install a power switch, circuit breaker and fuse near the controller.
  (Recommended fuse: Time-lag fuse, rated voltage 250 V AC, rated current 2 A)
• For the grounding wire, use a thick wire (1.25 – 2.0 mm^2).
• For a 24 V AC/DC power source, ensure polarity is correct when using direct current (DC).
• Do not apply a commercial power source to the sensor which is connected to the input terminal nor allow the power source to come into contact with the sensor.
• Use a thermocouple and compensating lead wire according to the sensor input specifications of this controller.
• Use the 3-wire RTD according to the sensor input specifications of this controller.
• For DC voltage input, (+) side input terminal number of 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC differs from that of 0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC and 0 to 1 V DC.

Terminal Number	DC Voltage Input
⑯ and ⑲	0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC
⑱ and ⑲	0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC

• When using a relay contact output type, externally use a relay according to the capacity of the load to protect the built-in relay contact.
• When wiring, keep input wires (thermocouple, RTD, etc.) away from AC power sources or load wires.

4.1 Terminal Arrangement
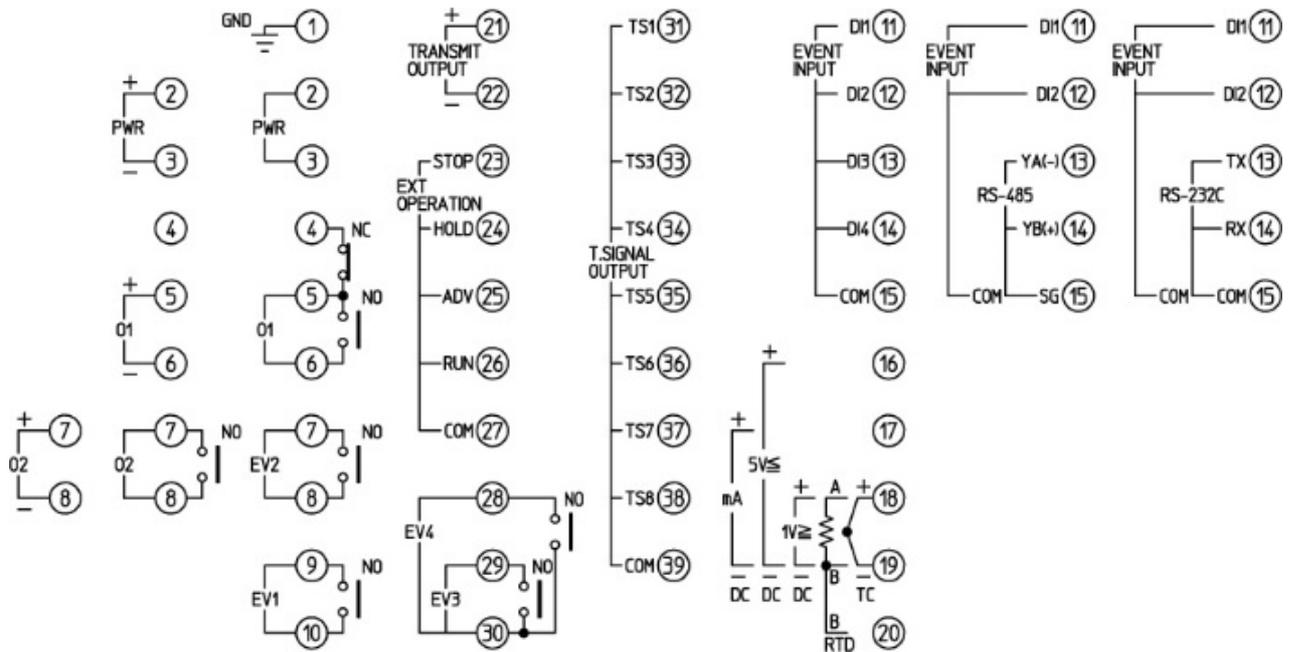

(Fig. 4.1-1)

Terminal Code	Description
GND	Grounding
PWR	Power supply 100 to 240 V AC or 24 V AC/DC
	For a 24 V AC/DC, ensure polarity is correct when using direct current (DC).
O1	Control output OUT1
O2	Control output OUT2 (DR, DS or DA option)
EV1	Event output EV1
EV2	Event output EV2
EV3	Event output EV3
EV4	Event output EV4
EVENT INPUT	Event input
RS-485/RS-232C	Serial communication RS-485 (C5 option) or RS-232C (C option)
TC	Thermocouple input
RTD	RTD input
DC 1V≧	DC voltage input: 0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC
DC 5V≦	DC voltage input: 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC
DC mA	Direct current input: 0 to 20 mA DC, 4 to 20 mA DC
TRANSMIT OUTPUT	Transmission output (TA or TV option)
EXT OPERATION	External operation input: STOP, HOLD, ADV, RUN
T.SIGNAL OUTPUT	Time signal output (TS option)

4.2 Lead Wire Solderless Terminal

Use a solderless terminal with an insulation sleeve in which an M3 screw fits as shown below. 0.63 N•m of torque is recommended.

Solderless Terminal	Manufacturer	Model	Tightening Torque
Y-type	Nichifu Terminal Industries Co., Ltd.	TMEV1.25Y-3	0.63 N·m
Y-type	Japan Solderless Terminal MFG Co., Ltd.	VD1.25-B3A	0.63 N·m
Ring-type	Nichifu Terminal Industries Co., Ltd.	TMEV1.25-3	0.63 N·m
Ring-type	Japan Solderless Terminal MFG Co., Ltd.	V1.25-3	0.63 N·m
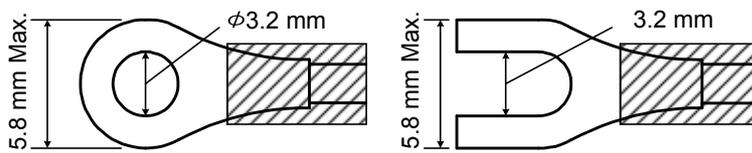

(Fig. 4.2-1)

4.3 Wiring

For the terminal arrangement, refer to Section "4.1 Terminal Arrangement" (p.15).

4.3.1 Grounding

For the grounding wire, use a thick wire (1.25 to 2.0 mm^2).
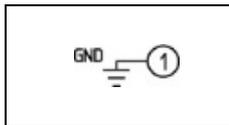

4.3.2 Power Supply

Power supply voltage is 100 to 240 V AC or 24 V AC/DC.
For a 24 V AC/DC, ensure polarity is correct when using direct current (DC).
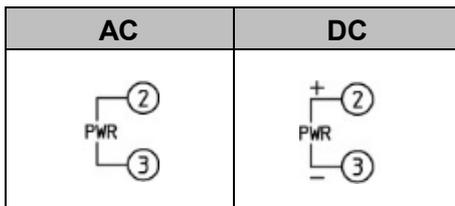

4.3.3 Control Output OUT1 and OUT2

When Heating/Cooling control (DR, DS, DA option) is ordered, control output OUT2 is available. Specifications of Control output OUT1 and OUT2 are shown below.

Control Output OUT1

Relay contact	1a 1b
	Control capacity: 3 A 250 V AC (resistive load),
	1 A 250 V AC (inductive load cosϕ=0.4)
	Electrical life: 100,000 cycles
Non-contact voltage (for SSR drive)	12 V DC±15%
	Max. 40 mA (short circuit protected)
Direct current	4 to 20 mA DC
	Load resistance: Max. 600 Ω

Control Output OUT2

Relay contact (DR option)	1a Control capacity: 3 A 250 V AC (resistive load) 1 A 250 V AC (inductive load cosϕ=0.4) Electrical life: 100,000 cycles
Non-contact voltage (for SSR drive) (DS option)	12 V DC±15% Max. 40 mA (short circuit protected))
Direct current (DA option)	4 to 20 mA DC Load resistance: Max. 600 Ω

Relay contact	Non-contact voltage, Direct current

Number of Shinko SSR units when connected in parallel (for Non-contact voltage output):
• SA-400 series: 5 units
• SA-500 series: 2 units

4.3.4 Input

Input wirings are shown below.

For DC voltage input, (+) side input terminal number of 0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC differs from that of 0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC.

Thermocouple input	RTD input	DC voltage input 0 to 10 mV DC -10 to 10 mV DC 0 to 50 mV DC 0 to 100 mV DC 0 to 1 V DC	DC voltage input 0 to 5 V DC 1 to 5 V DC 0 to 10 V DC	Direct current input

4.3.5 Event Output EV1, EV2, EV3 and EV4

Specifications of Event output EV1, EV2, EV3 and EV4 are shown below.

Relay contact	1a
	Control capacity: 3 A 250 V AC (resistive load)
	1 A 250 V AC (inductive load $\cos\phi$=0.4)
	Electrical life: 100,000 cycles

Event output EV1	Event output EV2	Event output EV3 Event output EV4
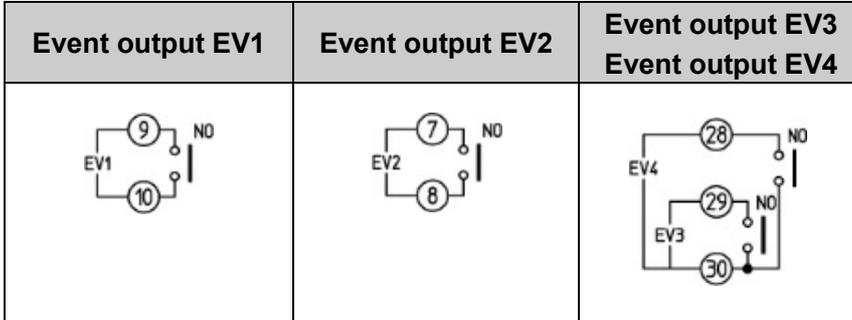

Event output EV3 and EV4 share one common terminal.

4.3.6 Event Input

Up to 4 points of Event input are available.
If Serial communication (C, C5 option) is ordered, up to 2 points of Event input are available.

Specifications of Event input are shown below.

Circuit current when closed	Approx. 16 mA

4 points of Event input	2 points of Event input
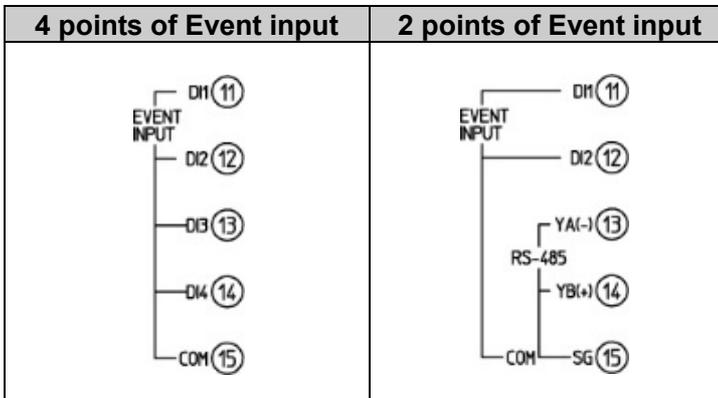

Level action is used to determine ON or OFF.
When power is turned ON, level action is engaged.

4 points of Event input: Pattern numbers 1 to 15 can be selected by ON (Closed) or OFF (Open)
                     status of DI1 to DI4.
2 points of Event input: Pattern numbers 1 to 3 can be selected by ON (Closed) or OFF (Open)
                     status of DI1 and DI2.

Pattern numbers selected by Event input have priority over pattern numbers selected by keypad operation.
To select pattern numbers by keypad, make sure all Event inputs are in OFF (Open) status.

• **4 points of Event input DI1 to DI4 [●: ON (Closed) status]**

PTN Display	*	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

DI3					●	●	●	●					●	●	●	●
DI4									●	●	●	●	●	●	●	●

* This pattern number is selected via the keypad.

• **2 points of Event input DI1 and DI2 [●: ON (Closed) status]**

PTN Display	*	1	2	3
DI1		●		●
DI2			●	●

* This pattern number is selected via the keypad.

4.3.7 External Operation Input

4 points of External operation input are available.

Specifications of External operation input are shown below.

Circuit current when closed	Approx. 16 mA
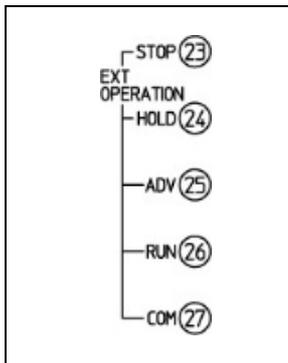

Signal edge action is used to determine ON or OFF.
Signal rising edge action from OFF (Open) to ON (Closed) of External operation input is engaged, and program control RUN, STOP, HOLD and ADVANCE are performed.
When power is turned ON, level action is engaged.

External Operation Input	External Operation Input Function
STOP	Stops the program control.
HOLD	During program control, current performing step progress pauses.
ADV	During program control, interrupts performing step, and proceeds to the beginning of the next step.
RUN	Performs program control.

4.3.8 Serial Communication

When the C or C5 option is ordered, Serial communication is available.

C option	C5 option
RS-232C ⌐ TX ⑬ ├ RX ⑭ └ COM ⑮	RS-485 ⌐ YA(-) ⑬ ├ YB(+) ⑭ └ SG ⑮

(1) Serial Communication
Wiring example when using USB communication cable CMC-001-1 (sold separately)
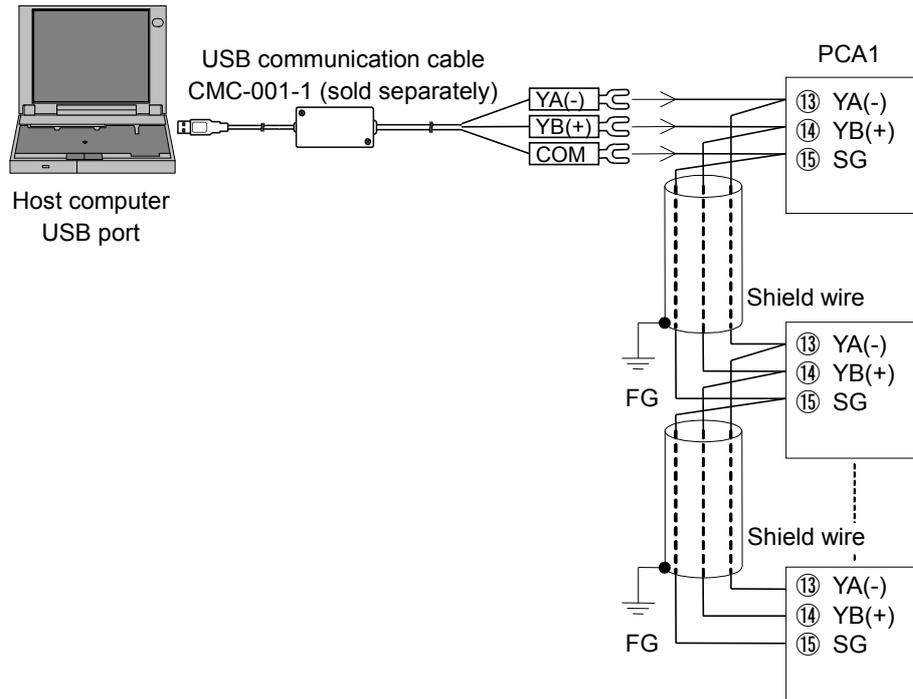

(Fig. 4.3.8-1)

Wiring example when using RS-232C communication line
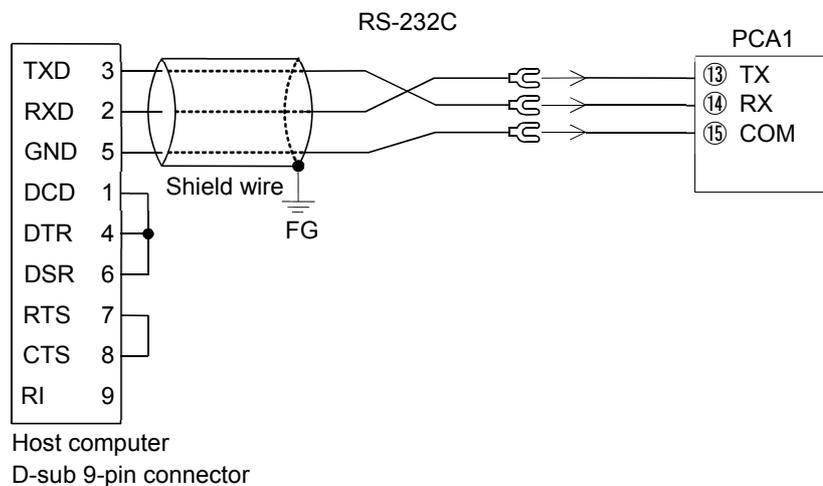

(Fig. 4.3.8-2)

Wiring example when using communication converter IF-400 (sold separately)
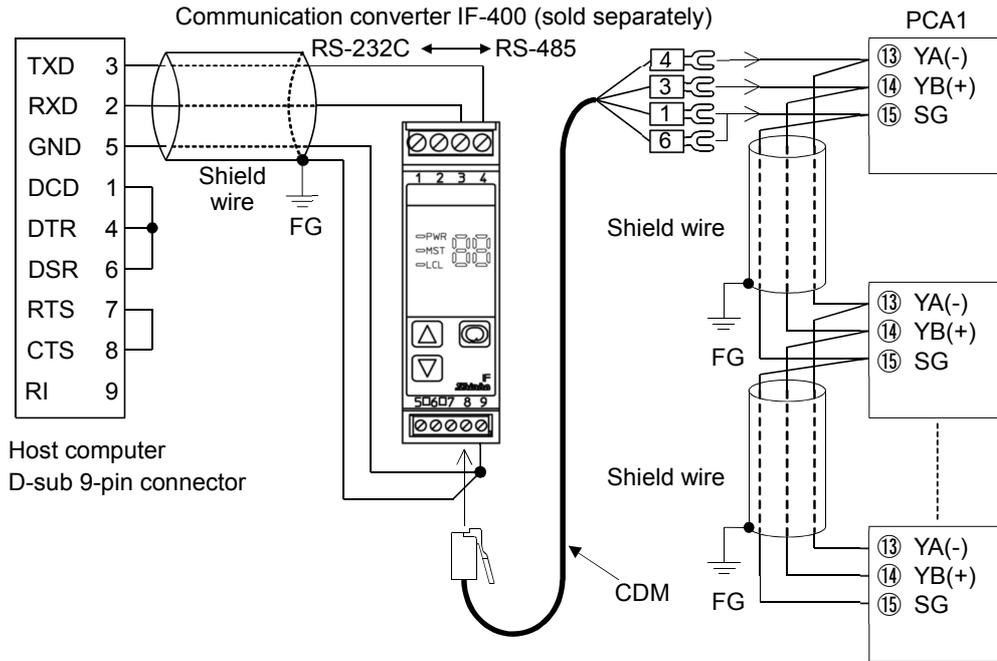

(Fig. 4.3.8-3)

(2) Set Value (SV) Digital Transmission [SVTC]

If 'Set Value (SV) digital transmission' [SVTC] is selected in [Communication protocol], SV can be digitally transmitted to the Shinko indicating controllers with communication function (C5 option).
Update cycle: 250 ms

Connection

Connect YA (-) to YA (-), YB (+) to YB (+), SG to SG terminal (of PCA1 and indicating controllers with communication function) respectively.
A maximum of 31 units can be connected.

Wiring example of PCA1 and indicating controllers with communication function
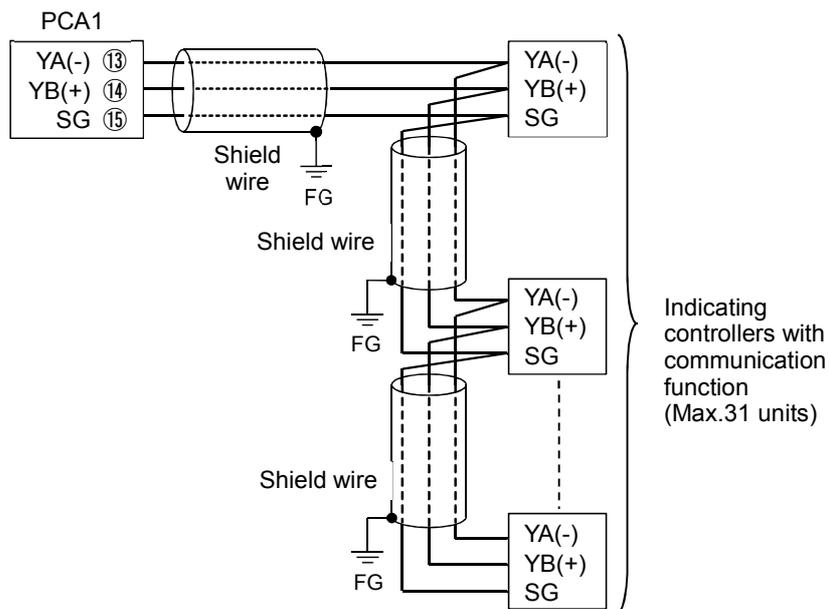

(Fig. 4.3.8-4)

Shield wire

Connect only one end of the shield to the FG terminal to avoid a ground loop. If both ends of the shield wire are connected to the FG terminal, the circuit will be closed, resulting in a ground loop. This may cause noise.

Be sure to ground the FG terminal.

Recommended cable: OTSC-VB 2PX0.5SQ (made by Onamba Co., Ltd.) or equivalent (Use a twisted pair cable.)

4.3.9 Transmission Output

If the TA, TV option is ordered, Transmission output is available.

Specifications of Transmission output are shown below.

Resolution		12000
Output	**TA option**	4 to 20 mA DC Load resistance: Max. 500 Ω
	TV option	0 to 1 V DC Load resistance: Min. 100 kΩ
Output accuracy		Within $\pm$0.3% of Transmission output span
Response time		400 ms + Input sampling period (0% $\longrightarrow$ 90%)
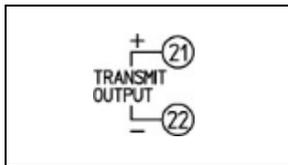

Converting the value (PV, SV or MV transmission) to analog signal every 125 ms, outputs the value in current or voltage. (Factory default: PV transmission)

Outputs Transmission output low limit value if Transmission output high limit and low limit value are the same.

If SV or MV transmission is selected, 4 mA or 0 V will be output when program control stops (in Standby).

4.3.10 Time Signal Output

If the TS option is ordered, Time signal output is available.

Specifications of Time signal output are shown below.

Number of circuits	8
Open collector	Capacity: 24 V DC Max. 50 mA

```
        ┌─ TS1 ㉛

        ├─ TS2 ㉜

        ├─ TS3 ㉝

        ├─ TS4 ㉞
T.SIGNAL
OUTPUT
        ├─ TS5 ㉟

        ├─ TS6 ㊱

        ├─ TS7 ㊲

        ├─ TS8 ㊳

        └─ COM ㊴
```
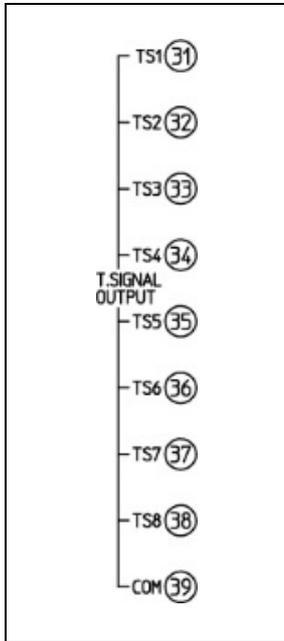

For the Time signal output, a maximum of 8 points (Time signal output TS1 to TS8) can be selected for each step.

Time signal outputs TS1 to TS5 can be used as Status output as follows.

Time signal output TS1 ⟶ Status (RUN) output

Time signal output TS2 ⟶ Status (HOLD) output

Time signal output TS3 ⟶ Status (WAIT) output

Time signal output TS4 ⟶ Status (FAST) output

Time signal output TS5 ⟶ Status (STOP) output

When program control is performing, outputs Time signal output TS1 to TS8 in accordance with the settings (Time signal output OFF time, Time signal output ON time) of selected time signal block.

5. Outline of Key Operation and Explanation of Groups

5.1 Outline of Key Operation

(*): Select a pattern number with the PTN ▲ key, and perform program control with the RUN key.
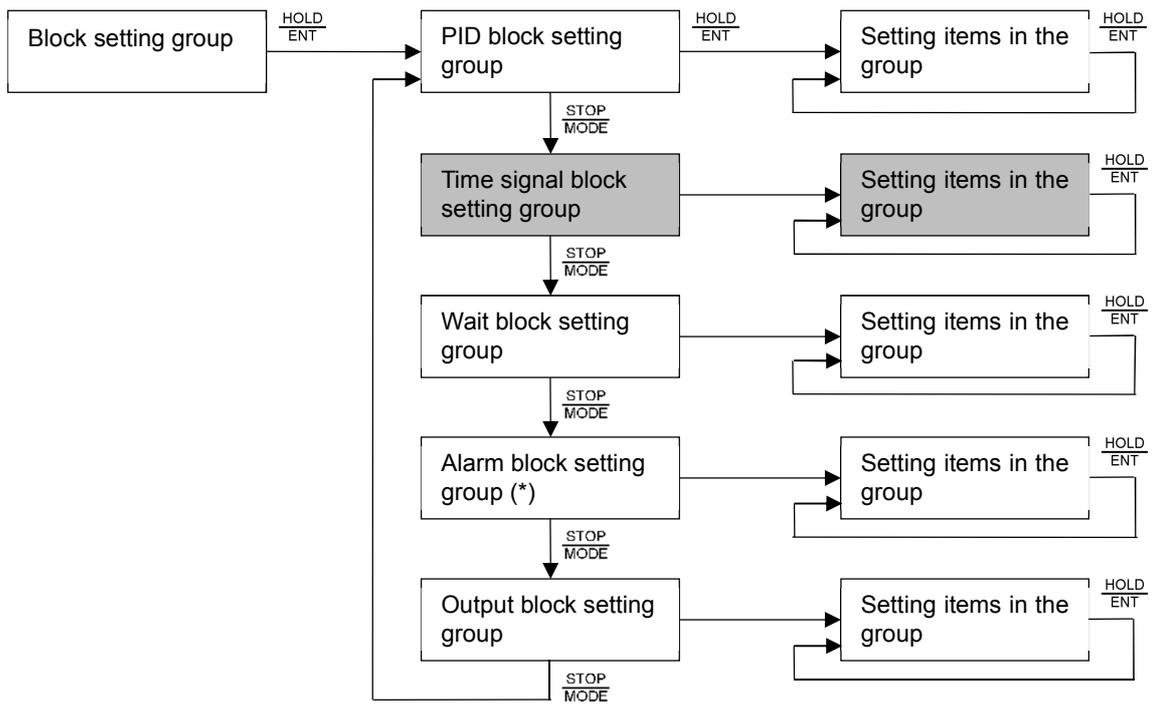

- 24 -

Explanation of Mode

Mode	Description	
RUN mode	The unit enters the RUN mode when power is turned ON. Resumes from Program control Stop (in Standby) or Program control RUN, depending on the status at power OFF. Indication differs depending on the status below.	
	Program control Stop (in Standby)	PV, SV and PTN indicators light up. The PV Display indicates PV. The PTN Display indicates the pattern number. Other indicators and Displays are unlit.
	Program control RUN	PV, SV, PTN, STEP, PROFILE, Time unit and Action indicators are lit. The PV Display indicates PV. The SV/MV/TIME Display indicates SV, MV or TIME. The PTN Display indicates the pattern number. The STEP Display indicates the step number.
Group selection mode	Selects a group from the following: Pattern setting group, Block setting group, Repetitions and Pattern link setting group, AT perform group, Engineering setting group, Auto/Manual control switch group	

Key Operation

| Key Operation	Description
↓ , ⟶	If any key is pressed, the unit moves to the next item, illustrated by an arrow.
STOP/MODE	Press the STOP/MODE key until the desired setting item appears.
SET/RST	Returns to RUN mode from any mode.
DISP/B.MODE	Moves back to the previous mode (opposite to when the STOP/MODE or HOLD/ENT key is pressed).
STOP/MODE + DISP/B.MODE	When the STOP/MODE and DISP/B.MODE key are pressed at the same time, the mode returns to the previous setting group as follows. Block setting group ← (STOP/MODE + DISP/B.MODE) ← Alarm block setting group ← (STOP/MODE + DISP/B.MODE) ← EV4 alarm value
PTN/▲ + ADV/▼	**Return-to-Previous Function** If PTN/▲ and ADV/▼ keys are pressed at the same time during program control RUN, interrupts performing step, and the unit moves back to the previous step, and performs control. However, if the elapsed time of the current step is less than 1 minute, the program control goes back to the beginning of the previous step. If the elapsed time in the current step is longer than 1 minute, the program control goes back to the beginning of the current step. The Return-to-Previous Function is disabled at Step 0 of started pattern, but moves back to the beginning of Step 0.
RUN	**Program clearing function** When program control is stopped (in Standby), and if the RUN key is pressed for approximately 3 seconds at any item in pattern setting group, data (for current step on the STEP Display and all the following steps) will return to the factory default.
PTN/▲ + ADV/▼ + DISP/B.MODE (3 sec)	**Data clearing function** When program control is stopped (in Standby), and if the PTN/▲, ADV/▼ and DISP/B.MODE keys are pressed simultaneously for 3 seconds, the PV Display indicates ⌐ℓ R⬚⬚, and all program data – except Input type, OUT1 proportional cycle, OUT2 proportional cycle – will return to the factory default. It takes approx. 30 seconds for data clear.

5.2 Explanation of Groups

Press the SET/RST key in RUN mode. The unit moves to Pattern setting group in Group selection mode.
Select a group with the STOP/MODE key, and press the HOLD/ENT key. Setting items in the group can be set.

If the HOLD/ENT key is pressed in the Block setting group, the unit enters setting groups such as PID block, Alarm block.
Select a group with the STOP/MODE key, and press the HOLD/ENT key. Setting items in the group can be set.

If the HOLD/ENT key is pressed in the Engineering setting group, the unit enters setting groups such as Input parameter, Output parameter.
Select a group with the STOP/MODE key, and press the HOLD/ENT key. Setting items in the group can be set.

Group	PV Display	Contents
Pattern setting group	`G_PTN`	Selects the following items: Setting pattern number, Step SV, Step time, PID block number, Alarm block number, etc.
Block setting group	`G_bLK`	Selects the following setting groups: PID block, Time signal block, Wait block, Alarm block, Output block
PID block setting group	`b_PI d`	Sets the following items of blocks 0 to 9: OUT1 proportional band, Integral time, Derivative time, ARW, OUT2 proportional band (when DR, DS or DA option is ordered)
Time signal block setting group (when the TS option is ordered)	`b_TS□`	Sets the following items of blocks 0 to 15: Time signal output OFF time, Time signal output ON time
Wait block setting group	`b_WAT`	Sets Wait value of blocks 0 to 9.
Alarm block setting group	`b_ALM`	Sets the following alarm values of blocks 0 to 9: EV1 alarm value, EV2 alarm value, EV3 alarm value, EV4 alarm value (Appears when an Alarm type is selected in [Event output EV□ allocation].)
Output block setting group	`b_oUT`	Sets the following items of blocks 0 to 9: OUT1 high limit, OUT1 low limit, OUT2 high limit (when DR, DS or DA option is ordered), OUT2 low limit (when DR, DS or DA option is ordered), OUT1 rate-of-change
Repetitions and Pattern link setting group	`G_cHN`	Sets the number of repetitions and pattern links.
AT Perform group	`G_AT□`	Sets the following items: AT mode, AT Perform/Cancel, AT bias.

Group	PV Display	Contents
Engineering setting group	G_ENG	Selects the following setting groups: Input parameter, Output parameter, Event output parameter, SV limit, Transmission output parameter, Communication parameter, Other parameters
Input parameter setting group	E_INP	Sets the following items: Input type, Scaling high limit, Scaling low limit, Decimal point place, Sensor correction, PV filter time constant
Output parameter setting group	E_oUT	Sets the following items: OUT1 proportional cycle, OUT1 ON/OFF hysteresis, OUT2 proportional cycle (when DR, DS or DA option is ordered), OUT2 cooling method (when DR, DS or DA option is ordered), Direct/Reverse action, etc.
Event output parameter setting group	E_EVo	Sets the following items: Event output EV1 allocation, Event output EV2 allocation, Event output EV3 allocation, Event output EV4 allocation
SV limit setting group	E_LIM	Sets the following items: SV high limit, SV low limit.
Transmission output parameter setting group (When TA or TV option is ordered)	E_TRA	Sets the following items: Transmission output type, Transmission output high limit, Transmission output low limit
Communication parameter setting group (When C or C5 option is ordered)	E_coM	Sets the following items: Communication protocol, Instrument number, Communication speed, Response delay time, etc.
Other parameters setting group	E_oTH	Sets the following items: Set value lock, Program start Auto/Manual, Program control start type, Power restore action, etc.
Auto/Manual control switch group	G_MAN	Sets the following item: Auto/Manual control switch.

6. Basic Operating Procedure after Power ON and Setting Examples

6.2 Initial Setting, Program Pattern Setting and Block Setting

• Example of Initial Setting

Setting Group	Setting Item	Setting Example
Input parameter setting group	Input type	K, -200 to 1370℃
	Scaling high limit	1200℃
	Scaling low limit	0℃
Output parameter setting group	OUT1 proportional cycle	15 seconds
	Direct/Reverse action	Reverse action
Event output parameter setting group	Event output EV2 allocation	Process high alarm
	EV2 alarm Energized/ De-energized	Energized
Other parameters setting group	Program start Auto/Manual	Manual start
	Program control start type	PV start
	Power restore action	Continues after power is restored
	Step time unit	Hours:Minutes
	Step time indication	Remaining time
	Step SV indication	SV corresponding to the step time progress
	Step SV Hold function when program ends	Not holding

• Example of Program Pattern Setting

Pattern 1					
Step number	0	1	2	3	4
Step SV	500	500	1000	1000	0
Step time	0:30	1:00	0:40	1:00	2:00
PID block number	1	1	2	2	1
Wait block number	1	0	1	0	0
Alarm block number	1	2	1	2	1
Output block number	0	1	0	1	0

(Fig. 6.2-1)

Explanation of the Program Pattern

Step 0: After program control starts, control is performed so that SV gradually rises from 0℃ to 500℃ for 30 minutes.

Step 1: Control is performed to keep the SV at 500℃ for 1 hour.

Step 2: Control is performed so that SV gradually rises from 500℃ to 1000℃ for 40 minutes.

Step 3: Control is performed to keep the SV at 1000℃ for 1 hour.

Step 4: Control is performed so that SV gradually falls from 1000℃ to 0℃ for 2 hours.

• Example of Block Setting

How to set each block setting group

If program pattern is not set for a step, its block number becomes 0 (zero). We highly recommend that you leave the factory default of Block 0 in each block setting group as they are, and set the values from Block 1.

Setting Group	Setting Item	Setting Example
PID block setting group (*1)	Block 0 OUT1 proportional band	10℃
	Block 0 integral time	200 seconds
	Block 0 derivative time	50 seconds
	Block 0 ARW	50%
	Block 1 OUT1 proportional band	10℃
	Block 1 integral time	200 seconds
	Block 1 derivative time	50 seconds
	Block 1 ARW	50%
	Block 2 OUT1 proportional band	10℃
	Block 2 integral time	200 seconds
	Block 2 derivative time	50 seconds
	Block 2 ARW	50%
Wait block setting group	Block 0 Wait value	0℃ (*3)
	Block 1 Wait value	10℃
Alarm block setting group (*2)	Block 0 EV2 alarm value	0℃ (*4)
	Block 0 EV3 alarm value	0℃ (*4)
	Block 0 EV4 alarm value	0℃ (*4)
	Block 1 EV2 alarm value	600℃
	Block 1 EV3 alarm value	5℃
	Block 1 EV4 alarm value	5℃
	Block 2 EV2 alarm value	1100℃
	Block 2 EV3 alarm value	10℃
	Block 2 EV4 alarm value	10℃
Output block setting group	Block 0 OUT1 high limit	100% (*5)
	Block 0 OUT1 low limit	0% (*5)
	Block 1 OUT1 high limit	80%
	Block 1 OUT1 low limit	0%

(*1) As PID constant are obtained by performing AT, values in the PID block setting group are factory default values.

(*2) As EV1 is used as Pattern end output, 'EV1 alarm value' setting item does not appear.

(*3) As 'Block 0 Wait value' is used as Wait Disabled, the Wait value is factory default.

(*4) As Block 0 EV2, EV3 and EV4 alarm values are used as No alarm action, their values are factory default values.

(*5) As Block 0 OUT1 high limit and low limit are used as MV setting range for manual control, their values are factory default values.

Operation method will be described based on the Initial setting, Program pattern setting and Block setting examples.

Indication of Setting Details

```
5EN5⊡
K⊡⊡⊑
```
Input type

• Upper left: PV Display: Indicates setting item characters.
• Lower left: SV/MV/TIME Display: Indicates setting values or selections.
• Right side: Indicates the setting item.

Key Operation for Setting

• To increase or decrease the set value (numerical value), use the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key.
  If the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key is pressed with the $\frac{FAST}{\blacktriangleleft FAST \blacktriangleright}$ key simultaneously, makes the numeric value change faster.
  To switch the selection items, use the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key.

• To register the setting data, use the $\frac{HOLD}{ENT}$ or $\frac{STOP}{MODE}$ key.

• $\frac{STOP}{MODE}$ + $\frac{DISP}{B.MODE}$ means pressing the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys at the same time.

• To return to RUN mode from any setting group, press the $\frac{SET}{RST}$ key.
  The unit can return to RUN mode from any setting item.

7. Setting Items

The following groups will be described:

Pattern setting group, Block setting group, Repetitions and Pattern link setting group,

AT perform group, Engineering setting group, Auto/Manual control switch group

How to register the setting data

- To increase or decrease the set value (numeric value), use the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key.

  If the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key is pressed with the $\frac{FAST}{\blacktriangleleft FAST \blacktriangleright}$ key simultaneously, makes the numeric value change faster.

  To switch the selection items, use the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key.
- To register the setting data, use the $\frac{HOLD}{ENT}$ or $\frac{STOP}{MODE}$ key.

7.1 Pattern Setting Group

In the Pattern setting group, the following setting items can be set:

Setting pattern number, Step SV, Step time, PID block number, Alarm block number, etc.

・ To enter Pattern Setting Group

Press the $\frac{SET}{RST}$ key in RUN mode. The PV Display indicates G_PTN, and the unit enters Pattern setting group in Group selection mode.

Press the $\frac{HOLD}{ENT}$ key in the Pattern setting group. The PV Display indicates $PTN\square$, and the unit enters 'Setting pattern number'.

・ Explanation of Setting Item

Upper left: PTN Display, PV Display

        The PTN Display indicates the setting pattern number, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

        The STEP Display indicates the setting step number, and the SV/MV/TIME Display indicates factory default.

Right side: Indicates the setting item, explanation of its function, and setting range (or selection item).

| PTN Display | PV Display | Setting item, function, setting range (or selection item) |

| □0 | ΓEMP□ | **Step 0 step SV**
• Sets Step 0 step SV.
• Setting range:
  SV low limit to SV high limit |
| □0 | □□□□0 | |

STEP Display   SV/MV/TIME Display
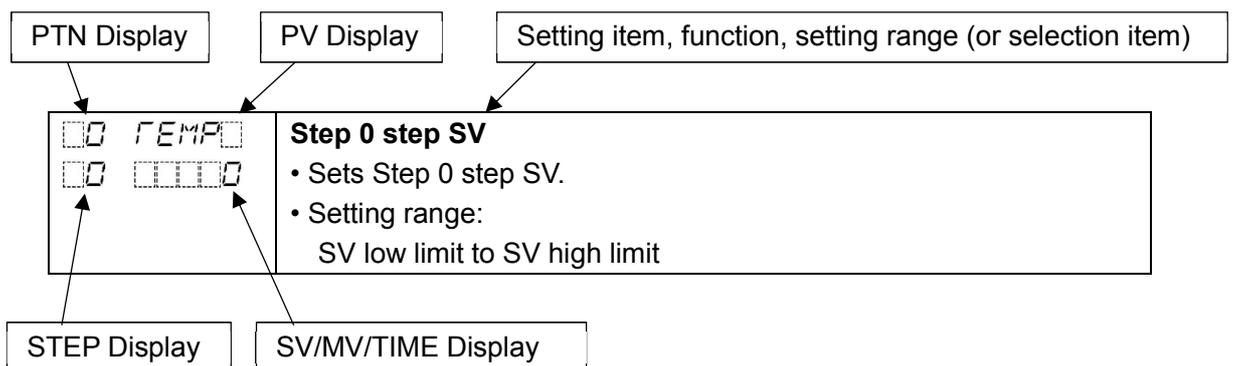

Setting items in the Pattern setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range
▢▢ *PrN*▢ ▢▢ ▢▢▢▢*0*	**Setting pattern number** • Selects the setting pattern number. • Selection item: 0 to 15

▢*0* *TEMP*▢
▢*0* ▢▢▢▢*0*
	Step 0 step SV
	• Sets Step 0 step SV.
	  Step SV is the value at the end of the step.
	• Setting range:
	  SV low limit to SV high limit

▢*0* *TIME*▢
▢*0* ▢*00.00*
	Step 0 step time
	• Sets Step 0 step time.
	  Step time is the processing time of the step.
	• Setting range:
	  ⌐⌐⌐⌐, 0:00 to 99:59 Time unit follows the selection in [Step time unit].
	  If the $\overset{ADV}{\blacktriangledown}$ key is pressed at 0:00, ⌐⌐⌐⌐ will be set.
	  When ⌐⌐⌐⌐ is set, Fixed value control will be performed using step SV at Step 0.

▢*0* *_PI d*▢ ▢*0* ▢▢▢▢*0*	**Step 0 PID block number** • Selects PID block number used for Step 0. • Selection item: 0 to 9

▢*0* *_TS1*▢
▢*0* ▢▢▢▢*0*
	Step 0 Time signal 1 block number
	• Selects Time signal 1 block number used for Step 0.
	  Selects any one number from a maximum of 16 Time signal blocks.
	  The same number can be selected as many times as desired.
	• Selection item:
	  0 to 15
	  Available when Time signal output (TS option) is ordered, and when Time signal
	   output TS1 is selected in [Time signal output TS1/Status (RUN) output].

▢*0* *_TS2*▢
▢*0* ▢▢▢▢*0*
	Step 0 Time signal 2 block number
	• Selects Time signal 2 block number used for Step 0.
	  Selects any one number from a maximum of 16 Time signal blocks.
	  The same number can be selected as many times as desired.
	• Selection item:
	  0 to 15
	  Available when Time signal output (TS option) is ordered, and when Time signal
	   output TS2 is selected in [Time signal output TS2/Status (HOLD) output].

▢*0* *_TS3*▢
▢*0* ▢▢▢▢*0*
	Step 0 Time signal 3 block number
	• Selects Time signal 3 block number used for Step 0.
	  Selects any one number from a maximum of 16 Time signal blocks.
	  The same number can be selected as many times as desired.
	• Selection item:
	  0 to 15
	  Available when Time signal output (TS option) is ordered, and when Time signal
	   output TS3 is selected in [Time signal output TS3/Status (WAIT) output].

Character, Factory Default	Setting Item, Function, Setting Range

□0 _ᴦЧЧ□
 □0 □□□□0
	Step 0 Time signal 4 block number
	 • Selects Time signal 4 block number used for Step 0.
	   Selects any one number from a maximum of 16 Time signal blocks.
	   The same number can be selected as many times as desired.
	 • Selection item:
	   0 to 15
	   Available when Time signal output (TS option) is ordered, and when Time signal
	   output TS4 is selected in [Time signal output TS4/Status (FAST) output].

□0 _ᴦЧ5□
 □0 □□□□0
	Step 0 Time signal 5 block number
	 • Selects Time signal 5 block number used for Step 0.
	   Selects any one number from a maximum of 16 Time signal blocks.
	   The same number can be selected as many times as desired.
	 • Selection item:
	   0 to 15
	   Available when Time signal output (TS option) is ordered, and when Time signal
	   output TS5 is selected in [Time signal output TS5/Status (STOP) output].

□0 _ᴦЧ6□
 □0 □□□□0
	Step 0 Time signal 6 block number
	 • Selects Time signal 6 block number used for Step 0.
	   Selects any one number from a maximum of 16 Time signal blocks.
	   The same number can be selected as many times as desired.
	 • Selection item:
	   0 to 15
	   Available when Time signal output (TS option) is ordered.

□0 _ᴦЧ7□
 □0 □□□□0
	Step 0 Time signal 7 block number
	 • Selects Time signal 7 block number used for Step 0.
	   Selects any one number from a maximum of 16 Time signal blocks.
	   The same number can be selected as many times as desired.
	 • Selection item:
	   0 to 15
	   Available when Time signal output (TS option) is ordered.

□0 _ᴦЧ8□
 □0 □□□□0
	Step 0 Time signal 8 block number
	 • Selects Time signal 8 block number used for Step 0.
	   Selects any one number from a maximum of 16 Time signal blocks.
	   The same number can be selected as many times as desired.
	 • Selection item:
	   0 to 15
	   Available when Time signal output (TS option) is ordered.
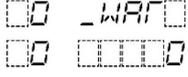

□0 _WAᴦ□ □0 □□□□0	**Step 0 Wait block number** • Selects a Wait block number used for Step 0. • Selection item: 0 to 9
□0 _ALM□ □0 □□□□0	**Step 0 Alarm block number** • Selects an Alarm block number used for Step 0. • Selection item: 0 to 9

Character, Factory Default	Setting Item, Function, Setting Range
□*0* _*oUr*□ □*0* □□□□*0*	**Step 0 Output block number** • Selects an Output block number used for Step 0. • Selection item: 0 to 9
□*0* *rEMP*□ □*1* □□□□*0*	**Step 1 step SV** • Sets Step 1 step SV. • Setting range: SV low limit to SV high limit
	Repeat the above settings up to 'Step 15 Output block number', in the same way if necessary.
□*0* _*oUr*□ *15* □□□□*0*	**Step 15 Output block number** • Selects an Output block number used for Step 15. • Selection item: 0 to 9

At this stage, settings of Pattern setting group are complete.

If the STOP/MODE and DISP/B.MODE keys are pressed at the same time, the unit returns to Group selection mode.

By pressing the SET/RST key, the unit returns to RUN mode.

7.2 Block Setting Group

In the Block setting group, the following setting groups are included:

PID block setting group, Time signal block setting group, Wait block setting group, Alarm block setting group, Output block setting group

About settings in each block setting group

If program pattern is not set for a step, its block number becomes 0 (zero). We highly recommend that you leave the factory default of Block 0 in each block setting group as they are, and set the values from Block 1.

· To enter the Block setting group

Press the $\frac{SET}{RST}$ in RUN mode, and press $\frac{STOP}{MODE}$ key (in that order). The PV Display indicates $\mathcal{L}$_$\mathcal{bLK}$, and the unit enters the Block setting group in Group selection mode.

Press the $\frac{HOLD}{ENT}$ in the Block setting group. The PV Display indicates $\mathcal{b}$_$\mathcal{Pl}$ $\mathcal{d}$, and the unit enters PID block setting group.

Every time the $\frac{STOP}{MODE}$ key is pressed, the block setting groups are switched as shown below.

By pressing the $\frac{HOLD}{ENT}$ key at each block setting group, the unit moves to the setting items in the group.
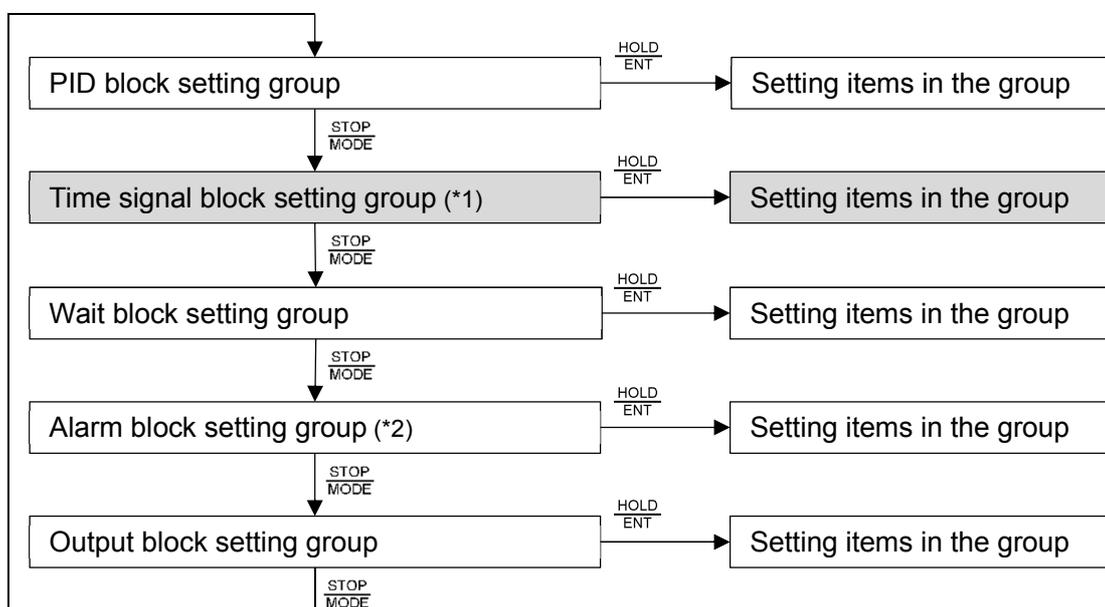

(*1) Available when Time signal output (TS option) is ordered.
(*2) Available when 001 to 012 (Alarm output) is selected in [Event output EV□ allocation].

· Explanation of Setting Item

Upper left: PTN Display, PV Display

The PTN Display is unlit, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default.

Right side: Indicates the setting item, explanation of its function, and setting range (or selection item).

| PTN Display | PV Display | Setting item, function, setting range (or selection item) |

Block 0 OUT1 proportional band
· Sets Block 0 OUT1 proportional band.
· Setting range:
  Thermocouple, RTD input without decimal point: 0 to input span℃ (℉)

| STEP Display | SV/MV/TIME Display |

- 47 -
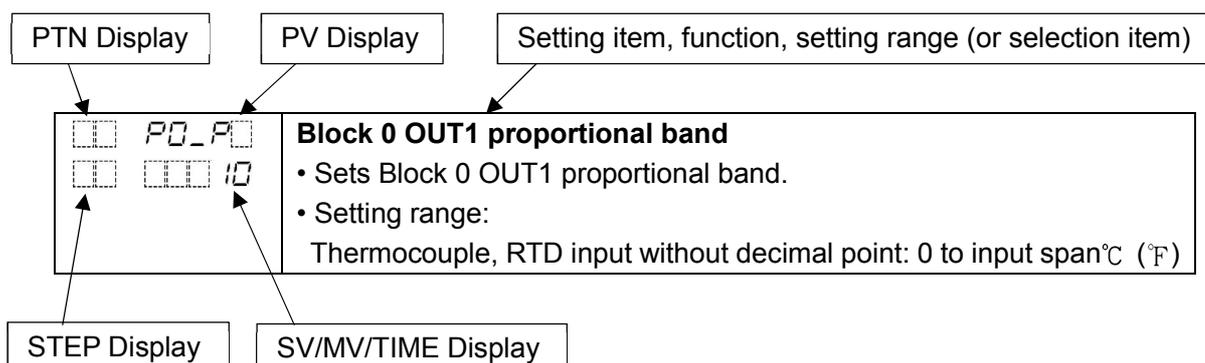

7.2.1 PID Block Setting Group

In PID block setting group, the following can be set for blocks 0 to 9:
OUT1 proportional band, Integral time, Derivative time, ARW and OUT2 proportional band (DR, DS or DA option)

Refer to recommended usage of block numbers as follows:
Block 0: For Fixed value control
Block 1: For low temperature program control
Block 2: For medium temperature program control
Block 3: For high temperature program control

Setting items in the PID block setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range

P0_P
10
	Block 0 OUT1 proportional band
	• Sets Block 0 OUT1 proportional band.
	  When set to 0 or 0.0, OUT1 becomes ON/OFF control.
	• Setting range:
	  Thermocouple, RTD input without decimal point: 0 to input span ℃ (℉)
	  Thermocouple, RTD input with decimal point: 0.0 to input span ℃ (℉)
	  DC voltage, current input: 0.0 to 1000.0%

P0_I
200
	Block 0 integral time
	• Sets Block 0 integral time.
	  Setting the value to 0 disables the function.
	• Setting range:
	  0 to 3600 seconds

P0_d
50
	Block 0 derivative time
	• Sets Block 0 derivative time.
	  Setting the value to 0 disables the function.
	• Setting range:
	  0 to 1800 seconds

P0_n 50	**Block 0 ARW** • Sets Block 0 ARW. • Setting range: 0 to 100%

P0Pb
10
	Block 0 OUT2 proportional band
	• Sets Block 0 OUT2 proportional band.
	  OUT2 proportional band: Multiplied value of OUT1 proportional band
	  OUT2 proportional band is calculated as follows.
	    OUT2 proportional band = OUT1 proportional band x Multiplication factor
	  When set to 0.0, OUT2 becomes ON/OFF control.
	  When OUT1 proportional band is set to 0 or 0.0, OUT2 becomes ON/OFF control.
	• Setting range:
	  0.0 to 10.0 times (Multiplied value of Block 0 OUT1 proportional band)
	  Available when Heating/Cooling control (DR, DS or DA option) is ordered.

Character, Factory Default	Setting Item, Function, Setting Range
`P 1_P` `10`	**Block 1 OUT1 proportional band** • Sets Block 1 OUT1 proportional band. When set to 0 or 0.0, OUT1 becomes ON/OFF control. • Setting range: Thermocouple, RTD input without decimal point: 0 to input span ℃ (℉) Thermocouple, RTD input with decimal point: 0.0 to input span ℃ (℉) DC voltage, current input: 0.0 to 1000.0%
	Repeat the above settings up to 'Block 9 OUT2 proportional band', in the same way if necessary.
`P9Pb` `10`	**Block 9 OUT2 proportional band** • Sets Block 9 OUT2 proportional band. OUT2 proportional band: Multiplied value of OUT1 proportional band OUT2 proportional band is calculated as follows. OUT2 proportional band = OUT1 proportional band x Multiplication factor When set to 0.0, OUT2 becomes ON/OFF control. When OUT1 proportional band is set to 0 or 0.0, OUT2 becomes ON/OFF control. • Setting range: 0.0 to 10.0 times (Multiplied value of Block 9 OUT1 proportional band) Available when Heating/Cooling control (DR, DS or DA option) is ordered.

At this stage, settings of PID block setting group are complete.
If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Block setting group.
By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.2.2 Time Signal Block Setting Group

In Time signal block setting group, the following can be set for blocks 0 to 15:
Time signal output OFF time, Time signal output ON time

• Time signal output function

Time signal output OFF time and Time signal output ON time are set within each step time, and outputs them during Program control RUN.

A maximum of 8 points of Time signal output can be set for each step.

To use the Time signal output function, set the Time signal block number (for which Time signal output OFF time and Time signal output ON time have been set) for each step.

Up to 16 Time signal blocks can be set.

• Program pattern setting example

Pattern 1			
Step number		0	1
	500 / 0		
Step SV		500	500
Step time (Hours:Minutes)		0:30	1:00
PID block number		1	1
Time signal 1		0	1
block number	ON / OFF		①
Time signal 2		2	2
block number	ON / OFF		②
Time signal 3		1	2
block number	ON / OFF		③
Time signal 4		1	1
block number	ON / OFF		
Output block number		0	1

• Time signal block setting example

Time signal block number	Output OFF time (Hours:Minutes)	Output ON time (Hours:Minutes)
0	0:00	0:00
1	0:20	0:30
2	0:00	0:30

① Time signal output operates in a sequence of Time signal output OFF time and then Time signal output ON time.

The Time signal output automatically turns OFF when Time signal output ON time expires within a step.

② If ON time is the same value as the step time, the Time signal output will turn OFF for
a brief moment while Step numbers change.
Therefore, set the Time signal output ON time longer than the step time so that Time signal
output may turn ON even when steps changes.
③ When ON time is not the same value as the step time, from the point where steps move to
the next step, the Time signal output operates following the Time signal output OFF or ON
time of the next step, regardless of the Time signal output settings of the previous step.

Setting items in the Time signal block setting group are shown below.
Available when Time signal output (TS option) is ordered.

Character, Factory Default	Setting Item, Function, Setting Range
`00_F` `0000`	**Block 0 Time signal output OFF time** • Sets Block 0 Time signal output OFF time. • Setting range: 00:00 to 99:59 Time unit follows the selection in [Step time unit].
`00_N` `0000`	**Block 0 Time signal output ON time** • Sets Block 0 Time signal output ON time. • Setting range: 00:00 to 99:59 Time unit follows the selection in [Step time unit].
`01_F` `0000`	**Block 1 Time signal output OFF time** • Sets Block 1 Time signal output OFF time. • Setting range: 00:00 to 99:59 Time unit follows the selection in [Step time unit].
	Repeat the above settings up to 'Block 15 Time signal output ON time', in the same way if necessary.
`15_N` `0000`	**Block 15 Time signal output ON time** • Sets Block 15 Time signal output ON time. • Setting range: 00:00 to 99:59 Time unit follows the selection in [Step time unit].

At this stage, settings of Time signal block setting group are complete.
If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Block setting group.
By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.2.3 Wait Block Setting Group

In Wait block setting group, Wait value can be set for blocks 0 to 9.

• Wait function

During Program control RUN, the program does not proceed to the next step until the deviation between PV and SV enters SV±Wait value at the end of step.
When the Wait function is activated, the STEP Display flashes.

• Explanation of Wait function
  • Program pattern rising step

SV

Wait value 10℃

T T

500℃
490℃

Time

When PV becomes 490℃, the Wait function is cancelled, proceeding to the next step.

As PV is not in the range of [SV－Wait value], the Wait function is activated, and the unit does not proceed to the next step. The STEP Display flashes during Wait function.
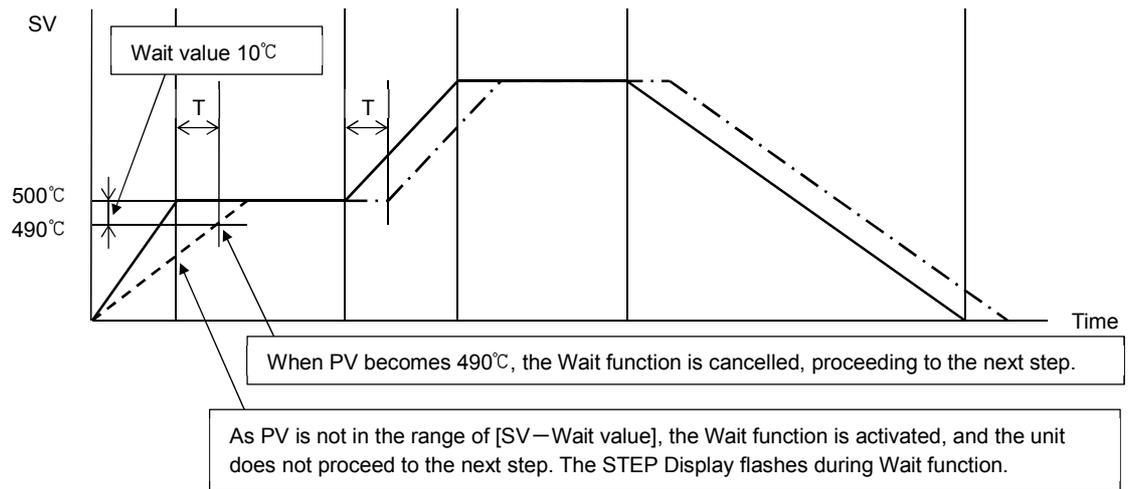

• Program pattern falling step

SV

Wait value 10℃

T T

510℃
500℃

Time

When PV becomes 510℃, Wait function is cancelled, proceeding to the next step.

As PV is not in the range of [SV+Wait value], the Wait function is activated, and the unit does not proceed to the next step. The STEP Display flashes during Wait function.
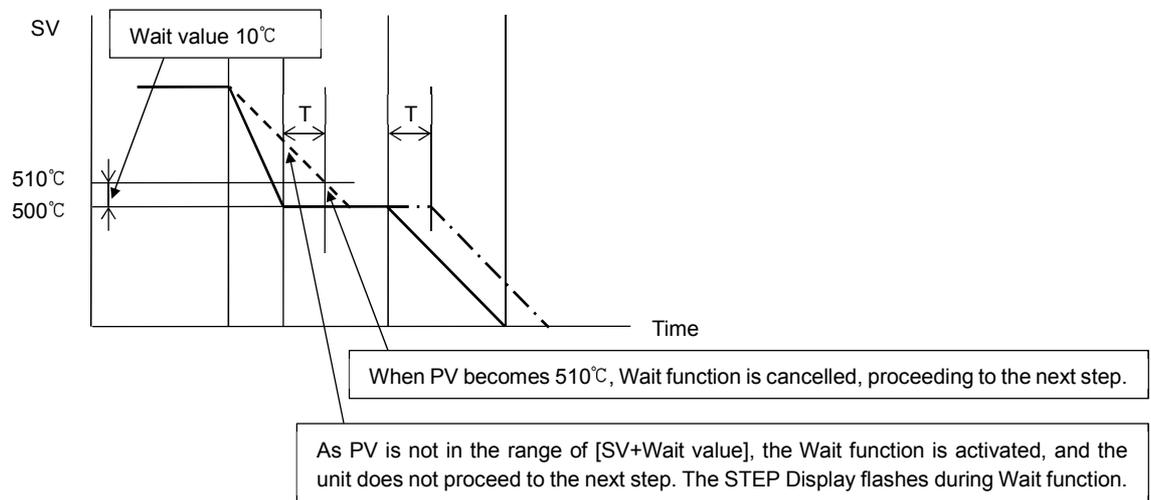

──────── Program pattern
- - - - - - PV
—·—·—·— Program pattern which is delayed by T due to Wait function

• How to cancel the Wait function

Press the $\frac{ADV}{▼}$ or $\frac{STOP}{MODE}$ key to cancel the Wait function.
Use External operation input [ADV] or [STOP] to cancel the Wait function as well.

Setting items in the Wait block setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range

W0_
0
	Block 0 Wait value
	• Sets Block 0 Wait value.
	  When set to 0 or 0.0, the Wait function is disabled.
	• Setting range:
	  Thermocouple, RTD input without decimal point: 0 to 100℃（℉）
	  Thermocouple, RTD input with decimal point: 0.0 to 100.0℃（℉）
	  DC voltage, current input: 0 to 1000 (The placement of the decimal point
	                             follows the selection.)

W1_
0
	Block 1 Wait value
	• Sets Block 1 Wait value.
	  When set to 0 or 0.0, the Wait function is disabled.
	• Setting range:
	  Thermocouple, RTD input without decimal point: 0 to 100℃（℉）
	  Thermocouple, RTD input with decimal point: 0.0 to 100.0℃（℉）
	  DC voltage, current input: 0 to 1000 (The placement of the decimal point
	                             follows the selection.)

	Repeat the above settings up to 'Block 9 Wait value', in the same way if necessary.

W9_
0
	Block 9 Wait value
	• Sets Block 9 Wait value.
	  When set to 0 or 0.0, the Wait function will be disabled.
	• Setting range:
	  Thermocouple, RTD input without decimal point: 0 to 100℃（℉）
	  Thermocouple, RTD input with decimal point: 0.0 to 100.0℃（℉）
	  DC voltage, current input: 0 to 1000 (The placement of the decimal
	                             point follows the selection.)

At this stage, settings of Wait block setting group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Block setting group.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.2.4 Alarm Block Setting Group

In Alarm block setting group, the following can be set for blocks 0 to 9:
EV1 alarm value, EV2 alarm value, EV3 alarm value, EV4 alarm value

• Alarm output

EV1 alarm output actions are shown below.
The same applies to EV2 alarm output, EV3 alarm output and EV4 alarm output.

• High limit alarm
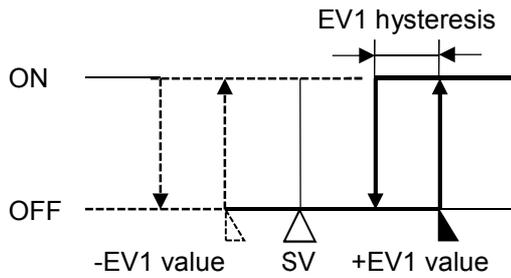

(Fig. 7.2.4-1)

• High limit with standby alarm

Alarm output is in standby.
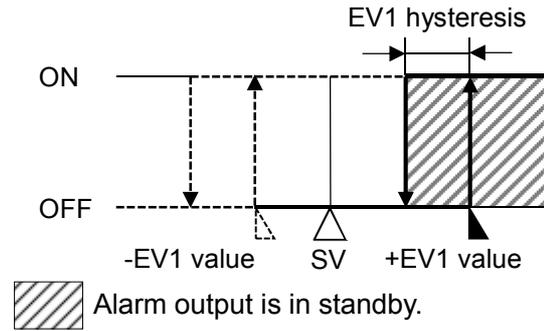

(Fig. 7.2.4-2)
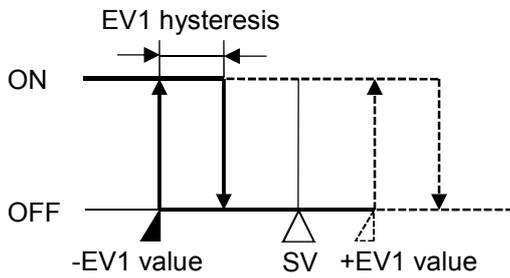

• Low limit alarm

(Fig. 7.2.4-3)

• Low limit with standby alarm

Alarm output is in standby.
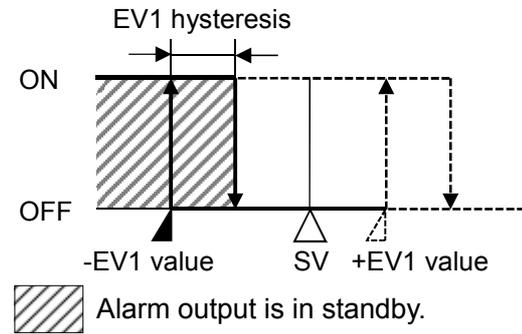

(Fig. 7.2.4-4)

• High/Low limits alarm
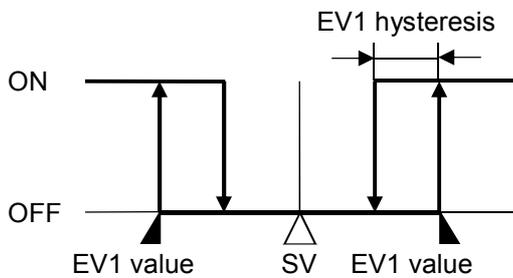

(Fig. 7.2.4-5)

• High/Low limits with standby alarm

Alarm output is in standby.
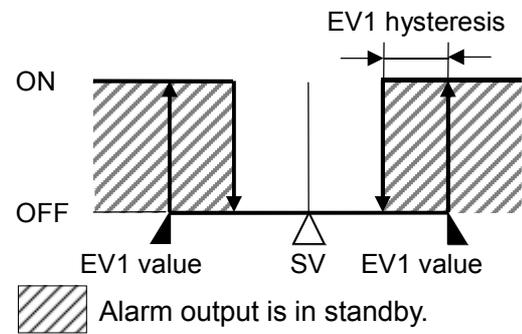

(Fig. 7.2.4-6)

• High/Low limit range alarm
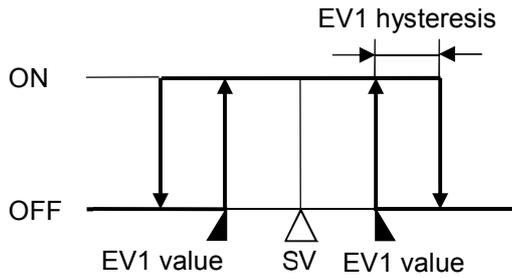

(Fig. 7.2.4-7)

• High/Low limit range with standby alarm

Alarm output is in standby.
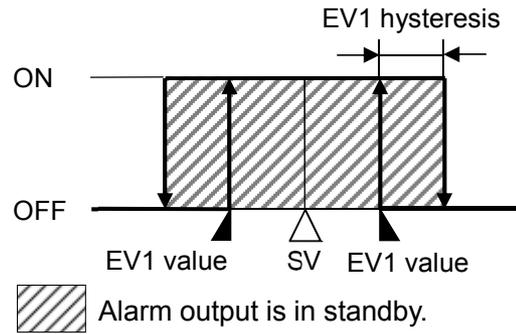

(Fig. 7.2.4-8)

• Process high alarm
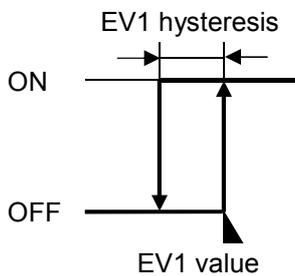

(Fig. 7.2.4-9)

• Process high with standby alarm

Alarm output is in standby.
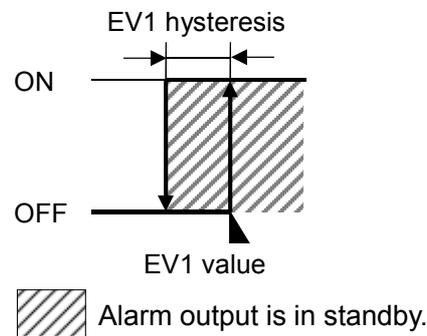

(Fig. 7.2.4-10)

• Process low alarm
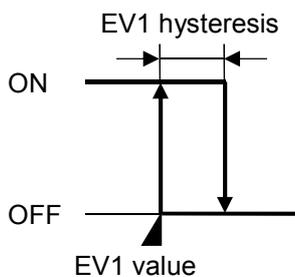

(Fig. 7.2.4-11)

• Process low with standby alarm

Alarm output is in standby.
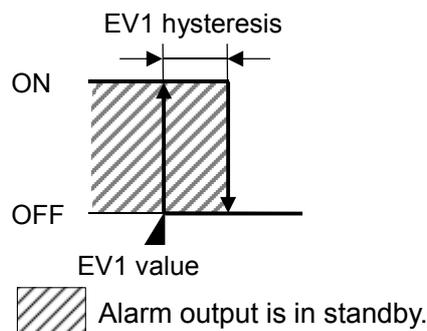

(Fig. 7.2.4-12)

For the alarm types (High limit alarm, High/Low limits alarm, Process high alarm), alarm output is activated when the indication is overscale, and the standby function is released for the alarms with standby function.

For the alarm types (Low limit alarm, High/Low limits alarm, Process low alarm), alarm output is activated when the indication is underscale, and the standby function is released for the alarms with standby function.

When the alarm action De-energized is selected, the output ON/OFF status acts conversely to the alarm action described above. (The Event indicators act the same as the action Energized.)

	Energized	De-energized
Event indicators	Light	Light
Event output	ON	OFF

Setting items in the Alarm block setting group are shown below.
When 001 to 012 (Alarm output) is selected in [Event output EV☐ allocation], the following will appear.

Character, Factory Default	Setting Item, Function, Setting Range	
☐☐ *A0_ 0* ☐☐ ☐☐☐*0*	**Block 0 EV1 alarm value** • Sets Block 0 EV1 alarm value. • Setting range:	
	Type	Setting Range
	No alarm action	
	High limit alarm	– (Input span) to Input span (*1) (Alarm action is disabled when set to 0 or 0.0.)
	High limit with standby alarm	– (Input span) to Input span (*1) (Alarm action is disabled when set to 0 or 0.0.)
	Low limit alarm	– (Input span) to Input span (*1) (Alarm action is disabled when set to 0 or 0.0.)
	Low limit with standby alarm	– (Input span) to Input span (*1) (Alarm action is disabled when set to 0 or 0.0.)
	High/Low limits alarm	0 to Input span (*1) (Alarm action is disabled when set to 0 or 0.0.)
	High/Low limits with standby alarm	0 to Input span (*1) (Alarm action is disabled when set to 0 or 0.0.)
	High/Low limit range alarm	0 to Input span (*1) (Alarm action is disabled when set to 0 or 0.0.)
	High/Low limit range with standby	0 to Input span (*1) (Alarm action is disabled when set to 0 or 0.0.)
	Process high alarm	Input range low limit to Input range high limit (*2)
	Process high with standby alarm	Input range low limit to Input range high limit (*2)
	Process low alarm	Input range low limit to Input range high limit (*2)
	Process low with standby alarm	Input range low limit to Input range high limit (*2)
	(*1) For DC voltage, current input, the input span is the same as the scaling span. (*2) For DC voltage, current input, input range low (or high) limit value is the same as scaling low (or high) limit value.	
	Available when 001 to 012 (Alarm output) is selected in [Event output EV1 allocation],	

☐☐ *A0_2☐*
 ☐☐ ☐☐☐*0*
	Block 0 EV2 alarm value
	 • Sets Block 0 EV2 alarm value.
	 • Setting range:
	   Same as that of Block 0 EV1 alarm value.
	   Available when 001 to 012 (Alarm output) is selected in [Event output EV2 allocation].	

☐☐ *A0_3☐*
 ☐☐ ☐☐☐*0*
	Block 0 EV3 alarm value
	 • Sets Block 0 EV3 alarm value.
	 • Setting range:
	   Same as that of Block 0 EV1 alarm value.
	   Available when 001 to 012 (Alarm output) is selected in [Event output EV3 allocation].	

Character, Factory Default	Setting Item, Function, Setting Range

`A0_4` `0`	**Block 0 EV4 alarm value**
	• Sets Block 0 EV4 alarm value.
	• Setting range:
	    Same as that of Block 0 EV1 alarm value.
	    Available when 001 to 012 (Alarm output) is selected in [Event output EV4 allocation].

`A1_1` `0`	**Block 1 EV1 alarm value**
	• Sets Block 1 EV1 alarm value.
	• Setting range:
	    Same as that of Block 0 EV1 alarm value.
	    Available when 001 to 012 (Alarm output) is selected in [Event output EV1 allocation].

	Repeat the above settings up to 'Block 9 EV4 alarm value', in the same way if necessary.

`A9_4` `0`	**Block 9 EV4 alarm value**
	• Sets Block 9 EV4 alarm value.
	• Setting range:
	    Same as that of Block 0 EV1 alarm value.
	    Available when 001 to 012 (Alarm output) is selected in [Event output EV4 allocation].

At this stage, settings of Alarm block setting group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Block setting group.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

### 7.2.5 Output Block Setting Group

In Output block setting group, the following can be set for blocks 0 to 9:

OUT1 high limit, OUT1 low limit, OUT2 high limit (DR, DS or DA option), OUT2 low limit (DR, DS or DA option), OUT1 rate-of-change

Setting items in the Output block setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range
o0_H 100	**Block 0 OUT1 high limit** • Sets Block 0 OUT1 high limit. • Setting range: OUT1 low limit to 100% (For direct current output: OUT1 low limit to 105%)
o0_L 0	**Block 0 OUT1 low limit** • Sets Block 0 OUT1 low limit. • Setting range: 0% to OUT1 high limit (For direct current output: -5% to OUT1 high limit)
o0Hb 100	**Block 0 OUT2 high limit** • Sets Block 0 OUT2 high limit. • Setting range: OUT2 low limit to 100% (For direct current output: OUT2 low limit to 105%) Available when Heating/Cooling control (DR, DS or DA option) is ordered.
o0Lb 0	**Block 0 OUT2 low limit** • Sets Block 0 OUT2 low limit. • Setting range: 0% to OUT2 high limit. (For direct current output: -5% to OUT2 high limit) Available when Heating/Cooling control (DR, DS or DA option) is ordered.
o0cL 0	**Block 0 OUT1 rate-of-change** • Sets Block 0 OUT1 rate-of-change (changing value of OUT1 MV for 1 second) Setting the value to 0 disables this function. **[OUT1 rate-of-change]** For Heating control, if PV is lower than SV, OUT1 MV changes as shown in (Fig. 7.2.5-1). If OUT1 rate-of-change is set, OUT1 MV can be changed by the rate-of-change (Fig. 7.2.5-2). This control is suitable for high temperature heaters (for which slow temperature rise is required, and used at approx. 1500 to 1800℃) which are easily burnt out from turning on electricity rapidly. ON (100%) OFF (0%) (Fig. 7.2.5-1)

(Fig. 7.2.5-2)

	• Setting range: 0 to 100 %/Second
`o1_H` `100`	**Block 1 OUT1 high limit** • Sets Block 1 OUT1 high limit. • Setting range: OUT1 low limit to 100% (For direct current output: OUT1 low limit to 105%)
	Repeat the above settings up to 'Block 9 OUT1 rate-of-change', in the same way if necessary.
`o9cL` `0`	**Block 9 OUT1 rate-of-change** • Sets Block 9 OUT1 rate-of-change (changing value of OUT1 MV for 1 second). Setting the value to 0 disables this function. • Setting range: 0 to 100 %/second

At this stage, settings of Output block setting group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Block setting group.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.3 Repetitions and Pattern Link Setting Group

In Repetitions and pattern link setting group, the following can be set:
　　　Number of repetitions, Pattern link

Pattern numbers 0 to 15 can be linked to the next pattern. Only pattern numbers in numerical order can be linked. For Pattern 15, Pattern 0 can be linked.

Randomly selected pattern numbers (Pattern 0 and Pattern 3) cannot be linked.

Number of repetitions for Pattern numbers 0 to 15: 0 to 9999 times.

For repetitions of linked pattern, the whole linked pattern will be repeated as many times as set in "starting pattern number".

(e.g.) If patterns 1 and 2 are linked, and if the number of repetitions of pattern 1 is set to 2 times, the whole linked pattern (Patterns 1 and 2) will be repeated twice.

• **To enter Repetitions and Pattern link setting group**

Press the $\frac{SET}{RST}$ key once in RUN mode, and press the $\frac{STOP}{MODE}$ key twice. The PV Display indicates $\mathcal{L}_{\mathcal{L}}\mathcal{L}HN$, and the unit enters the Repetitions and Pattern link setting group.

Press the $\frac{HOLD}{ENT}$ key in the Repetitions and Pattern link setting group. The PV Display indicates $REP\mathcal{\Gamma}$, and the unit enters 'Repetitions for pattern 0'.

• **Explanation of Setting Item**

Upper left: PTN Display, PV Display
　　　　　　The PTN Display indicates the setting pattern number, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display
　　　　　　The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default.

Right side: Indicates the setting item, explanation of its function, and setting range.

PTN Display	PV Display	Setting item, function, setting range (or selection item)

$\Box 0$　$REP\Gamma\Box$	**Repetitions for Pattern 0**
$\Box\Box$　$\Box\Box\Box\Box 0$	• Sets the number of repetitions of pattern 0. • Setting range: 　0 to 9999 times

STEP Display　　SV/MV/TIME Display
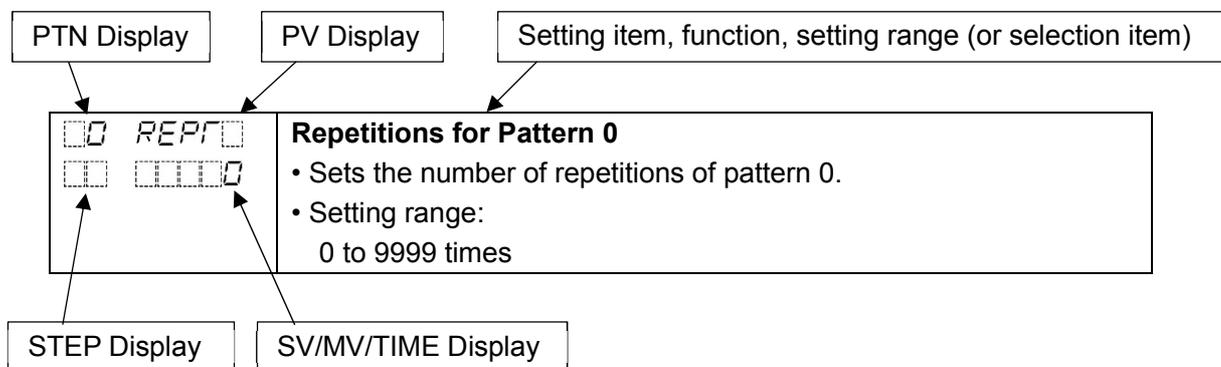

Setting items in the Repetitions and Pattern link setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range
$\Box 0$　$REP\Gamma\Box$ $\Box\Box$　$\Box\Box\Box\Box 0$	**Repetitions for pattern 0** • Sets the number of repetitions of pattern 0. • Setting range: 　0 to 9999 times
$\Box 0$　$cHI\,N\Box$ $\Box\Box$　-:-:-:-	**Pattern link between pattern 0 and pattern 1** • Selects Pattern link Enabled/Disabled for pattern 0 and pattern 1. • Selection item: 　　-:-:-:-　: Pattern link Disabled 　　$cHI\,N\Box$　: Pattern link Enabled

Character, Factory Default	Setting Item, Function, Setting Range
`1 REPr` `0`	**Repetitions for Pattern 1** • Sets the number of repetitions of Pattern 1. • Setting range: 0 to 9999 times
	Repeat the above settings up to 'Pattern link between pattern 15 and pattern 0', in the same way if necessary.

`15 cHI N` `-----`	**Pattern link between pattern 15 and pattern 0**
	• Selects Pattern link Enabled/Disabled for pattern 15 and pattern 0.
	• Selection item:
	  `-----` : Pattern link Disabled
	  `cHI N` : Pattern link Enabled

At this stage, settings of "Repetitions and pattern link setting group" are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to Group selection mode.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.4 AT Perform Group

In AT Perform group, the following can be set:
    AT mode, AT Perform/Cancel, AT bias

• To enter AT Perform group

Press the $\frac{SET}{RST}$ key once in RUN mode, and press the $\frac{STOP}{MODE}$ key 3 times. The PV Display indicates $\mathsf{L\_RF}$,, and the unit enters the AT Perform group.

Press the $\frac{HOLD}{ENT}$ in the AT Perform group. The PV Display indicates $\mathsf{RF\text{-}L}$, and the unit enters 'AT mode'.

• Explanation of Setting Item

Upper left: PTN Display, PV Display
            The PTN Display is unlit, and the PV Display indicates setting item characters.
Lower left: STEP Display, SV/MV/TIME Display
            The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default.
Right side: Indicates the setting item, explanation of its function, and setting range.

PTN Display		PV Display		Setting item, function, setting range (or selection item)

```
☐  RF-L☐    AT mode
☐  NoML☐    • Selects AT mode.
            • Selection item:
               NoML☐  : Normal mode
```

STEP Display		SV/MV/TIME Display
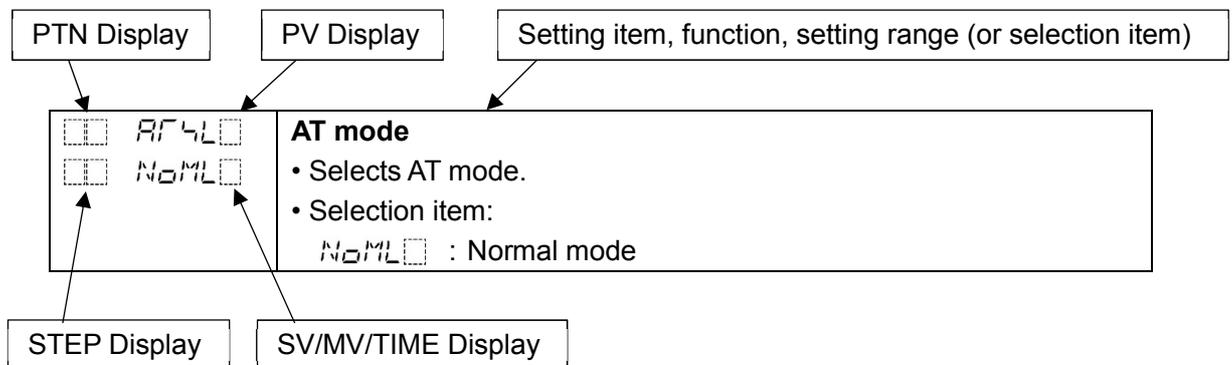

Setting items in the AT Perform group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range

☐ RF-L☐
☐ NoML☐
	AT mode
	• Selects AT mode.
	  Multi mode is enabled only during program control.
	• Selection item:
	  NoML☐ : Normal mode
	    When AT Perform is selected in [AT Perform/Cancel], AT starts immediately.
	  MULF☐ : Multi mode
	    AT is automatically performed at the point where 90% of progressed step time has elapsed.
	    If there are the same PID block numbers in one pattern, the AT is performed only for the first step.

☐ RF☐☐☐
☐ -‐-‐-‐-
	AT Perform/Cancel
	• Selects AT Perform/Cancel.
	  AT continues to perform when input errors (overscale, underscale) occur.
	  AT will be forced to stop if it has not been completed within 4 hours.
	• Selection item:
	  -‐-‐-‐- : AT Cancel
	  RF☐☐☐ : AT Perform

Character, Factory Default	Setting Item, Function, Setting Range

⬚⬚ *AT_b*⬚
⬚⬚ ⬚⬚⬚*20*
	AT bias
	• Sets bias value for the AT. (See p.117)
	  AT point is automatically determined by the deviation between PV and SV.
	  AT bias setting is available for Fixed value control.
	• Setting range:
	  Thermocouple, RTD input without decimal point: 0 to 50℃ (0 to 100℉)
	  Thermocouple, RTD input with decimal point: 0.0 to 50.0℃ (0.0 to 100.0℉)

At this stage, settings of AT Perform group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to Group selection mode.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.5 Engineering Setting Group

In Engineering setting group, the following setting groups are included:

Input parameter setting group, Output parameter setting group, Event output parameter setting group, SV limit setting group, Transmission output parameter setting group, Communication parameter setting group, Other parameters setting group

・**To Enter the Engineering Setting Group**

Press the $\frac{SET}{RST}$ key once in RUN mode, and press the $\frac{STOP}{MODE}$ key 4 times. The PV Display indicates G_ENG,, and the unit enters the Engineering setting group.

Press the $\frac{HOLD}{ENT}$ key in the Engineering setting group. The PV Display indicates E_INP,, and the unit enters Input parameter setting group in the Engineering setting group.

Each time the $\frac{STOP}{MODE}$ key is pressed, the Engineering setting group is switched as follows.

By pressing the $\frac{HOLD}{ENT}$ key at each setting group, the unit moves to its setting items in the group.
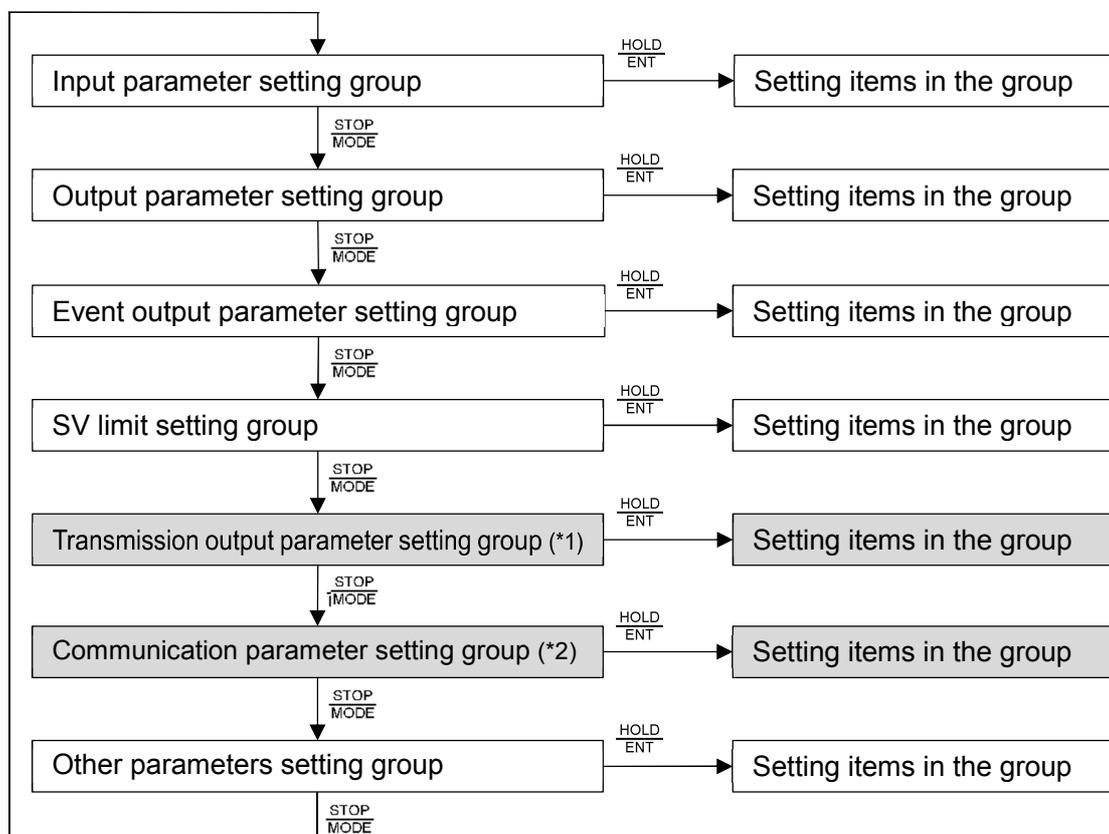

(*1) Available when Transmission output (TA or TV option) is ordered.

(*2) Available when Serial communication (C or C5 option) is ordered.

• **Explanation of Setting Item**

    Upper left: PTN Display, PV Display

            The PTN Display is unlit, and the PV Display indicates setting item characters.

    Lower left: STEP Display, SV/MV/TIME Display

            The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default.

    Right side: Indicates the setting item, explanation of its function, and setting range.

| PTN Display | PV Display | Setting item, function, setting range (or selection item) |

SEN4	**Input type**
K℃	• Selects the input type.
	• Selection item:

Character, Factory Default	Setting Item, Function, Setting Range
	$Pr2.F$: Pt100 -148.0 to 212.0℉ $Pr9.F$: Pt100 -148.0 to 932.0℉ $420MA$: 4 to 20 mA DC -2000 to 10000 $020MA$: 0 to 20 mA DC -2000 to 10000 $10MV$: 0 to 10 mV DC -2000 to 10000 $-10MV$: -10 to 10 mV DC -2000 to 10000 $50MV$: 0 to 50 mV DC -2000 to 10000 $100MV$: 0 to 100 mV DC -2000 to 10000 $01V$: 0 to 1 V DC -2000 to 10000 $05V$: 0 to 5 V DC -2000 to 10000 $15V$: 1 to 5 V DC -2000 to 10000 $010V$: 0 to 10 V DC -2000 to 10000
$SrLH$ 1370	**Scaling high limit** • Sets scaling high limit value. • Setting range: Scaling low limit value to Input range high limit value
$SrLL$ -200	**Scaling low limit** • Sets scaling low limit value. • Setting range: Input range low limit value to Scaling high limit value

dP
0
	Decimal point place
	• Selects decimal point place.
	• Selection item:
	  0 : No decimal point
	  0.0 : 1 digit after decimal point
	  0.00 : 2 digits after decimal point
	  0.000 : 3 digits after decimal point
	  0.0000 : 4 digits after decimal point
	  Available for DC voltage and current inputs.

So 0.0	**Sensor correction** • Sets sensor correction value. **[Sensor correction function]** When a sensor cannot be set at the exact location where control is desired, the sensor-measured temperature may deviate from the temperature in the controlled location. When using multiple indicating controllers, sometimes the measured temperatures do not concur due to differences in sensor accuracy or dispersion of load capacities. In such a case, the control can be set at the desired temperature by adjusting the input value of sensors. However, it is effective within the input rated range regardless of the sensor correction value. PV after sensor correction= Current PV + (Sensor correction value) • Setting range: Thermocouple, RTD input: -200.0 to 200.0℃ （℉） DC voltage, current input: -2000 to 2000 (The placement of the decimal point follows the selection.)

Character, Factory Default	Setting Item, Function, Setting Range

□□ *FILT*□
□□ □□□*0.0*
	PV filter time constant
	• Sets PV filter time constant.
	  If the value is set too high, it affects control results due to the delay of response.
	
	[PV filter time constant]
	  This is a filter function on the software, which has the same effect as a CR filter. By calculating first-order lag of PV, this suppresses input fluctuation caused by noise.
	  When the input value changes as shown in (Fig. 7.5.1-1), this function makes the input change slowly, as shown in (Fig. 7.5.1-2).
	  T (PV filter time constant) is the time when input change reaches 63% of the desired PV.
	
	(Fig. 7.5.1-1)　　　　　　　　　(Fig. 7.5.1-2)
	
	• Setting range:
	  0.0 to 100.0 seconds

At this stage, settings of Input parameter setting group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Engineering setting group.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.5.2 Output Parameter Setting Group

In Output parameter setting group, the following can be set:

OUT1 proportional cycle, OUT1 ON/OFF hysteresis, OUT2 proportional cycle (DR, DS or DA option), OUT2 cooling method (DR, DS or DA option), Direct/Reverse action, etc.

Setting items in the Output parameter setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range

⬜ c⬜⬜⬜
 ⬜ ⬜⬜30
 	
 • Relay contact output: 30 sec
 • Non-contact voltage output: 3 sec
	OUT1 proportional cycle
	 • Sets OUT1 proportional cycle.
	 • Setting range:
	   1 to 120 sec
	   Available when control output OUT1 is Relay contact output or Non-contact voltage output.

⬜ HYS⬜
 ⬜ ⬜⬜ 10
	OUT1 ON/OFF hysteresis
	 • Sets OUT1 ON/OFF hysteresis.
	
	 (Fig. 7.5.2-1)
	
	 • Setting range:
	   Thermocouple, RTD input: 0.1 to 1000.0℃ (℉)
	   DC voltage, current input: 1 to 10000 (The placement of the decimal point follows the selection.)

⬜ c_b⬜
 ⬜ ⬜⬜30
 	
 • DR: 30 sec
 • DS: 3 sec
	OUT2 proportional cycle
	 • Sets OUT2 proportional cycle.
	 • Setting range:
	   1 to 120 sec
	   Available when Heating/Cooling control (DR or DS option) is ordered.

⬜ cAcr⬜ ⬜ AIR⬜	**OUT2 cooling method** • Selects OUT2 cooling method. (Fig. 7.5.2-2)
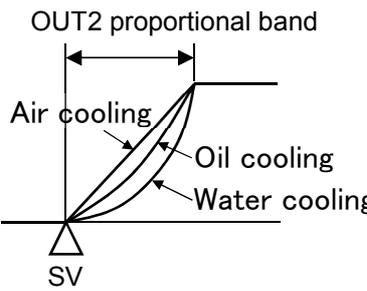

Character, Factory Default	Setting Item, Function, Setting Range
	• Selection item: ⌐⌐ ⌐⌐⌐ : Air cooling (Linear characteristics) ⌐⌐ ⌐⌐⌐ : Oil cooling (1.5th power of the linear characteristics) ⌐⌐⌐⌐⌐ : Water cooling (2nd power of the linear characteristics) Available when Heating/Cooling control (DR, DS or DA option) is ordered.
⌐⌐ HY⌐b⌐ ⌐⌐ ⌐⌐⌐ 10	**OUT2 ON/OFF hysteresis** • Sets OUT2 ON/OFF hysteresis. Hysteresis ON OFF SV　　OUT2 hysteresis (Fig. 7.5.2-3) • Setting range: 　Thermocouple, RTD input: 0.1 to 1000.0℃ (℉) 　DC voltage, current input: 1 to 10000 (The placement of the decimal point follows the selection.) Available when Heating/Cooling control (DR, DS or DA option) is ordered.
⌐⌐ db⌐⌐ ⌐⌐ ⌐⌐⌐00	**Overlap/Dead band** • Sets the overlap band or dead band for OUT1 and OUT2. 　+ Set value: Dead band 　– Set value: Overlap band **[Overlap band]** OUT1 proportional band OUT2 proportional band Overlap band ON　　　　　　　　　　　　　ON OUT1　　　　　　OUT2 OFF　　　　　　　　　　　　　OFF SV (Fig. 7.5.2-4)

	                     follows the selection.)
	
	Available when Heating/Cooling control (DR, DS or DA option) is ordered.

⬚ coNⲅ⬚
⬚ HEⲅⲅ⬚
	Direct/Reverse action
	• Selects either Reverse (Heating) or Direct (Cooling) control action.
	• Selection item:
	  HEⲅⲅ⬚ : Reverse action
	  cooL⬚ : Direct action

At this stage, settings of Output parameter setting group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Engineering setting group.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.5.3 Event Output Parameter Setting Group

In Event output parameter setting group, the following can be set:
Event output EV1 allocation, Event output EV2 allocation,
Event output EV3 allocation, Event output EV4 allocation
In Event output (EV1 to EV4) allocation, the following can be selected:
Alarm output, Pattern end output, Loop break alarm, Output during AT

Factory default values for EV1, EV2, EV and EV4:
EV1: Pattern end output
EV2: No event
EV3: Alarm output, High limit alarm
EV4: Alarm output, Low limit alarm

Alarm output actions are shown below.

• High limit alarm
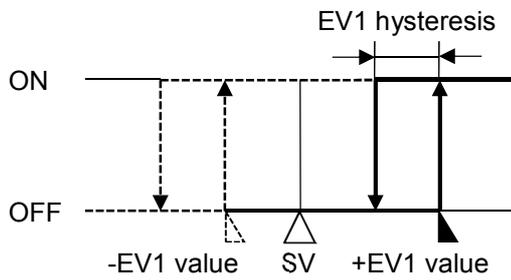

(Fig. 7.5.3-1)

• High limit with standby alarm

Alarm output is in standby.
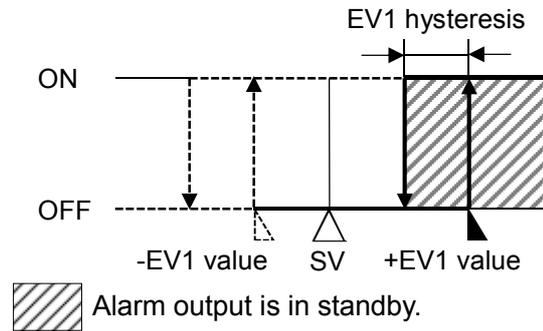

(Fig. 7.5.3-2)
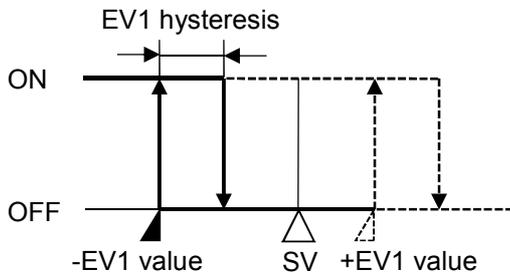

• Low limit alarm

(Fig. 7.5.3-3)

• Low limit with standby alarm

Alarm output is in standby.
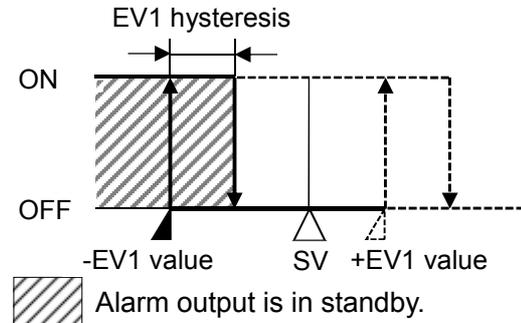

(Fig. 7.5.3-4)

• High/Low limits alarm
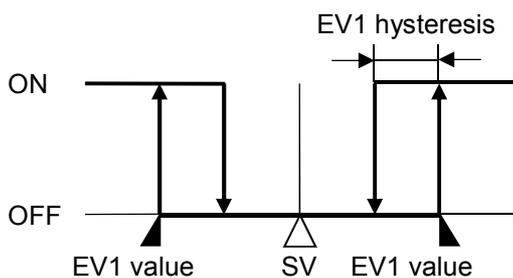

(Fig. 7.5.3-5)

• High/Low limits with standby alarm

Alarm output is in standby.
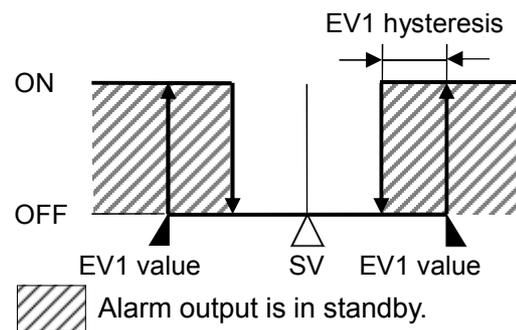

(Fig. 7.5.3-6)

• High/Low limit range alarm
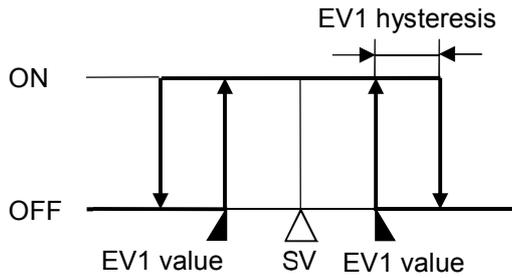

(Fig. 7.5.3-7)

• High/Low limit range with standby alarm

Alarm output is in standby.
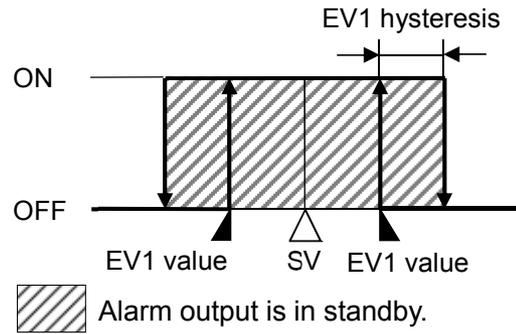

(Fig. 7.5.3-8)

• Process high alarm
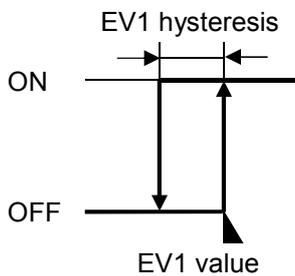

(Fig. 7.5.3-9)

• Process high with standby alarm

Alarm output is in standby.
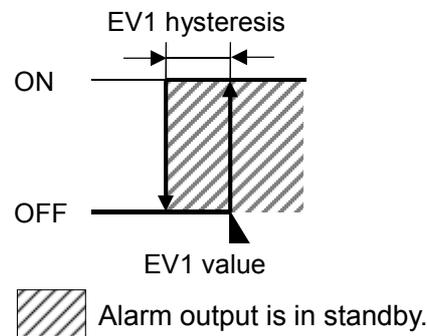

(Fig. 7.5.3-10)

• Process low alarm
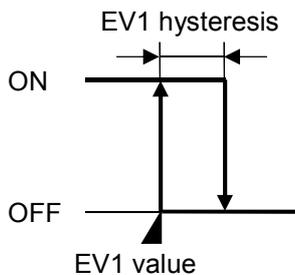

(Fig. 7.5.3-11)

• Process low with standby alarm

Alarm output is in standby.
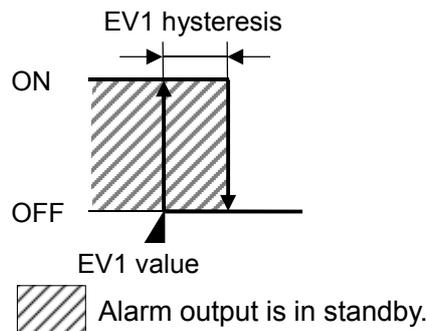

(Fig. 7.5.3-12)

For the alarm types (High limit alarm, High/Low limits alarm, Process high alarm), alarm output is activated when the indication is overscale, and the standby function is released for the alarms with standby function.

For the alarm types (Low limit alarm, High/Low limits alarm, Process low alarm), alarm output is activated when the indication is underscale, and the standby function is released for the alarms with standby function.

When the alarm action De-energized is selected, the output ON/OFF status acts conversely to the alarm action described above. (The Event indicators act the same as the action Energized.)

	Energized	De-energized
Event indicators	Light	Light
Event output	ON	OFF

Setting items in the Event output parameter setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range		
☐☐ *EV⌐o1* ☐☐ ☐☐*013*	**Event output EV1 allocation** • Selects Event output EV1 from the Event Output Allocation Table below. For Alarm output, the alarm value is set by ±deviation from the SV (excluding Process alarm), and if the input goes outside the range, the Alarm output is turned ON (turned OFF for High/Low limit range alarm). When De-energized action is selected, the output is activated conversely. Pattern end output turns ON after program control ends. Loop break alarm output turns ON after detecting actuator trouble (heater burnout, heater adhesion) or sensor burnout. 'Output during AT' turns ON during AT. • Selection item: **[Event Output Allocation Table]**		

Selection	Event output	Remarks
☐☐*000*	No event	
☐☐*001*	Alarm output, High limit alarm	
☐☐*002*	Alarm output, High limit with standby alarm	
☐☐*003*	Alarm output, Low limit alarm	
☐☐*004*	Alarm output, Low limit with standby alarm	
☐☐*005*	Alarm output, High/Low limits alarm	
☐☐*006*	Alarm output, High/Low limits with standby alarm	
☐☐*007*	Alarm output, High/Low limit range alarm	
☐☐*008*	Alarm output, High/Low limit range with standby alarm	
☐☐*009*	Alarm output, Process high alarm	
☐☐*010*	Alarm output, Process high with standby alarm	
☐☐*011*	Alarm output, Process low alarm	
☐☐*012*	Alarm output, Process low with standby alarm	
☐☐*013*	Pattern end output	
☐☐*014*	Loop break alarm output	
☐☐*015*	Output during AT	Turns ON during AT.

When 001 to 012 (Alarm output) is selected, one alarm can be set to one event output.
When 013 to 015 is selected, each output is common to multiple event outputs.

Character, Factory Default	Setting Item, Function, Setting Range
☐☐ *A1HY5* ☐☐ ☐☐☐*10*	**EV1 alarm hysteresis** • Sets EV1 alarm hysteresis. • Setting range: Thermocouple, RTD input: 0.1 to 1000.0℃ (℉) DC voltage, current input: 1 to 10000 (The placement of the decimal point follows the selection.) Available when 001 to 012 (Alarm output) is selected in [Event output EV1 allocation].
☐☐ *A1dLY* ☐☐ ☐☐☐☐*0*	**EV1 alarm delay time** • Sets EV1 alarm action delay time. When setting time has elapsed after PV enters the alarm output range, the alarm is activated. • Setting range: 0 to 10000 seconds Available when 001 to 012 (Alarm output) is selected in [Event output EV1 allocation].

Character, Factory Default	Setting Item, Function, Setting Range

☐ *A1REV* ☐ *NoML☐*	**EV1 alarm Energized/De-energized**
	• Selects Energized/De-energized status for EV1 alarm.
	 When Energized is selected, Event output EV1 is conductive (ON) while the EV1 indicator is lit. Event output EV1 is not conductive (OFF) while the EV1 indicator is not lit.
	 When De-energized is selected, Event output EV1 is not conductive (OFF) while the EV1 indicator is lit. Event output EV1 is conductive (ON) while the EV1 indicator is not lit.
	
	   High limit alarm (Energized) **High limit alarm (De-energized)**
	
	  (Fig. 7.5.3-13) (Fig. 7.5.3-14)
	
	• Selection item:
	  NoML☐ : Energized
	  REV4☐ : De-energized
	Available when 001 to 012 (Alarm output) is selected in [Event output EV1 allocation].

☐ *LP_Γ☐* ☐ *☐☐☐☐0*	**Loop break alarm time**
	• Sets the time to assess the Loop break alarm.
	
	[Loop break alarm]
	 When the control action is Reverse (Heating) control:
	  If the PV does not reach the Loop break alarm span setting within the time allotted to assess the Loop break alarm (after the MV has reached 100% or the OUT1 high limit value), the alarm will be activated.
	  Likewise, if the PV does not drop to the Loop break alarm span setting within the time allotted to assess the Loop break alarm (after the MV has reached 0% or the OUT1 low limit value), the alarm will be activated.
	 When the control action is Direct (Cooling) control:
	  If the PV does not drop to the Loop break alarm span setting within the time allotted to assess the Loop break alarm (after the MV has reached 100% or the OUT1 high limit value), the alarm will be activated.
	  Likewise, if the PV does not reach the Loop break alarm span setting within the time allotted to assess the Loop break alarm (after the MV has reached 0% or the OUT1 low limit value), the alarm will be activated.
	• Setting range:
	  0 to 200 minutes [Setting to 0 (zero) disables the Loop break alarm.]
	Available when 014 (Loop break alarm output) is selected in [Event output EV1 allocation].

Character, Factory Default	Setting Item, Function, Setting Range

LP_H □□□□0	**Loop break alarm span**
	• Sets the action span to assess the Loop break alarm.
	• Setting range:
	  Thermocouple, RTD input without decimal point: 0 to 150℃（℉）
	  Thermocouple, RTD input with decimal point: 0.0 to 150.0℃（℉）
	  DC voltage, current input: 1 to 1500 (The placement of the decimal point follows the selection.)
	  Available when 014 (Loop break alarm output) is selected in [Event output EV1 allocation].

EVГo2 □□000	**Event output EV2 allocation**
	• Selects Event output EV2 from the Event Output Allocation Table below.
	  For Alarm output, the alarm value is set by ± deviation from the SV (excluding Process alarm), and if the input goes outside the range, the Alarm output is turned ON (turned OFF for High/Low limit range alarm).
	  When De-energized action is selected, the output is activated conversely.
	  Pattern end output turns ON after program control ends.
	  Loop break alarm output turns ON after detecting actuator trouble (heater burnout, heater adhesion) or sensor burnout.
	  'Output during AT' turns ON during AT.
	• Selection item:
	[Event Output Allocation Table]

[Event Output Allocation Table]

Selection	Event output	Remarks
000	No event	
001	Alarm output, High limit alarm	
002	Alarm output, High limit with standby alarm	
003	Alarm output, Low limit alarm	
004	Alarm output, Low limit with standby alarm

Character, Factory Default	Setting Item, Function, Setting Range

▢▢ LP_H▢
 ▢▢ ▢▢▢▢0
	Loop break alarm span
	 • Sets the action span to assess the Loop break alarm.
	 • Setting range:
	   Thermocouple, RTD input without decimal point: 0 to 150℃（℉）
	   Thermocouple, RTD input with decimal point: 0.0 to 150.0℃（℉）
	   DC voltage, current input: 1 to 1500 (The placement of the decimal point follows
	                  the selection.)
	   Available when 014 (Loop break alarm output) is selected in [Event output EV4
	   allocation].

At this stage, settings of Event output parameter setting group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Engineering setting group.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.5.4 SV Limit Setting Group

In SV limit setting group, the following can be set:
SV high limit, SV low limit

Setting items in the SV limit setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range
⊔⊔ 5H⊔⊔ ⊔⊔ ⊔ 1370	**SV high limit** • Sets SV high limit value. • Setting range: SV low limit to Scaling high limit
⊔⊔ 5L⊔⊔ ⊔⊔ -⊔200	**SV low limit** • Sets SV low limit value. • Setting range: Scaling low limit to SV high limit

At this stage, settings of SV limit setting group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Engineering setting group.
By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.5.5 Transmission Output Parameter Setting Group

In Transmission output parameter setting group, the following can be set:

Transmission output type, Transmission output high limit, Transmission output low limit,

Setting items in the Transmission output parameter setting group are shown below.
Available when Transmission output (TA or TV option) are ordered.

Character, Factory Default	Setting Item, Function, Setting Range

⬚⬚ *TRo4* ⬚
⬚⬚ *PV*⬚⬚⬚
	Transmission output type
	• Selects transmission output type.
	  Converting the value (PV, SV or MV transmission) to analog signal
	  every 125 ms, outputs the value in current or voltage.
	• Selection item:
	  PV⬚⬚⬚ : PV transmission
	  SV⬚⬚⬚ : SV transmission
	  MV⬚⬚⬚ : MV transmission

⬚⬚ *TRLH*⬚
⬚⬚ ⬚*1370*
	Transmission output high limit
	• Sets the Transmission output high limit value.
	  This value correponds to 20 mA DC output or 1 V DC output.
	  If Transmission output high limit and low limit are set to the same value,
	  Transmission output low limit will be output.
	  If SV or MV transmission is selected, 4 mA DC or 0 V DC will be output
	  when program control stops (in Standby).
	• Setting range:
	  When PV or SV transmission is selected:
	    Transmission output low limit to Input range high limit
	  When MV transmission is selected: Transmission output low limit to 105.0%

⬚⬚ *TRLL*⬚
⬚⬚ -⬚*200*
	Transmission output low limit
	• Sets the Transmission output low limit value.
	  This value correponds to 4 mA DC output or 0 V DC output.
	  If Transmission output high limit and low limit are set to the same value,
	  Transmission output low limit will be output.
	  If SV or MV transmission is selected, 4 mA DC or 0 V DC will be output
	  when program control stops (in Standby).
	• Setting range:
	  When PV or SV transmission is selected:
	    Input range low limit to Transmission output high limit
	  When MV transmission is selected: -5.0% to Transmission output high limit

At this stage, settings of Transmission output parameter setting group are complete.
If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Engineering setting group.
By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.5.6 Communication Parameter Setting Group

In Communication parameter setting group, the following can be set:
Communication protocol, Instrument number, Communication speed, Response delay time, etc.

Setting items in the Communication parameter setting group are shown below.
Available when Serial communication (C or C5 option) are ordered.

Character, Factory Default	Setting Item, Function, Setting Range

☐☐ cM5L☐
 ☐☐ NoML☐
	Communication protocol
	 • Selects communication protocol.
	 • Selection item:
	    NoML☐ : Shinko protocol
	    ModR☐ : Modbus ASCII
	    ModR☐ : Modbus RTU
	    5VΓ☐☐ : Set value (SV) digital transmission

☐☐ cMNo☐
 ☐☐ ☐☐☐☐0
	Instrument number
	 • Sets the instrument number.
	   The instrument numbers should be set one by one when multiple
	   instruments are connected in Serial communication, otherwise
	   communication is impossible.
	 • Setting range:
	   0 to 95

☐☐ cM5P☐
 ☐☐ ☐☐☐96
	Communication speed
	 • Selects a communication speed equal to that of the host computer.
	 • Selection item:
	    ☐☐☐96 : 9600 bps
	    ☐☐192 : 19200 bps
	    ☐☐384 : 38400 bps

☐☐ cMFΓ☐
 ☐☐ 7EVN☐
	Data bit/Parity
	 • Selects data bit and parity, in accordance with the data bit and parity of the
	   host computer.
	 • Selection item:
	    8NoN☐ : 8 bits/No parity
	    7NoN☐ : 7 bits/No parity
	    8EVN☐ : 8 bits/Even
	    7EVN☐ : 7 bits/Even
	    8odd☐ : 8 bits/Odd
	    7odd☐ : 7 bits/Odd

☐☐ cM5Γ☐
 ☐☐ ☐☐☐☐1
	Stop bit
	 • Selects the stop bit, in accordance with the stop bit of the host computer.
	 • Selection item:
	    ☐☐☐☐1 : 1 bit
	    ☐☐☐☐2 : 2 bits

Character, Factory Default	Setting Item, Function, Setting Range

cMdY
10
	Response delay time
	• Response from the controller can be delayed after receiving command from the host computer.
	  If Response delay time is changed via software communication, the changed delay time will be reflected from that response data.
	• Setting range:
	  0 to 1000 ms

At this stage, settings of Communication parameter setting group are complete.
If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Engineering setting group.
By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.5.7 Other Parameters Setting Group

In Other parameters setting group, the following can be set:

Set value lock, Program start Auto/Manual, Program control start type, Power restore action, etc.

Setting items in the Other parameters setting group are shown below.

Character, Factory Default	Setting Item, Function, Setting Range

`Lock` `-----`	**Set value lock**
	 • Selects either Unlock or Lock.
	 • Selection item:
	  `-----` : Unlock
	  `Lock` : Lock (None of the set values – except Set value lock – can be changed.)

`5_MAN` `MANU`	**Program start Auto/Manual**
	 • Selects Program start Auto/Manual when power is turned ON.
	 • Selection item:
	  `MANU` : Manual start
	   When power is turned on, and in Program control Stop (in Standby), and if the RUN key is pressed, the selected pattern number program will be performed from Step 0.
	  `AUTo` : Automatic start
	   When power is turned on, the selected pattern number program will be automatically performed from Step 0.

`5_5V` `    0`	**Step SV when program control starts** • Sets SV when program control starts. • Setting range: SV low limit to SV high limit
`5_5L` `PV  `	**Program control start type** • Selects program control start type. **PV start, PVR start** When program control starts, step SV is advanced to the PV (25℃), then program control starts. (Fig. 7.5.7-1)

- 87 -

Character, Factory Default	Setting Item, Function, Setting Range

	SV start
	
	Program control starts from the step SV which has been set in [Step SV when program control starts].
	
	(Fig. 7.5.7-2)
	
	• Selection item:
	$P\kappa\boxed{}$: PV start
	   Only when program control starts, the step SV is advanced to the PV, then program control starts.
	$P\kappa R\boxed{}$: PVR start
	   When program control starts and in pattern repeating, the step SV is advanced to the PV, then program control starts.
	$5\kappa\boxed{}$: SV start
	   Program control starts from the step SV which has been set in [Step SV when program control starts].

$\boxed{}$ $PREF\boxed{}$
$\boxed{}$ $coNF\boxed{}$
	Power restore action
	• Selects the program status if a power failure occurs mid-program and it is restored.
	• Selection item:
	$5F_oP\boxed{}$: Stops after power is restored.
	   Stops program control, and returns to Standby status.
	$coNF\boxed{}$: Continues after power is restored.
	   Continues (Resumes) previous program control after power is restored.
	$HoLd\boxed{}$: Suspends after power is restored.
	   Suspends (on hold) current program control, and performs control using the step SV at the point of suspension.
	   Pressing the RUN key cancels suspension, and Program control resumes.

Character, Factory Default	Setting Item, Function, Setting Range
⬜⬜ M_5⬜⬜ ⬜⬜ MIN⬜⬜	**Step time unit** • Selects the Step time unit. • Selection item: MIN⬜⬜ : Hours:Minutes 5Ec⬜⬜ : Minutes:Seconds

⬜⬜ 5_ΓM⬜
⬜⬜ RΓ⬜⬜⬜
	Step time indication
	• During program control, selects step time indication type
	  when the SV/MV/TIME Display is switched to TIME indication.
	• Selection item:
	 RΓ⬜⬜⬜ : Remaining time
	        Indicates remaining step time.
	 ΓM⬜⬜⬜ : Step time
	        Indicates step time which has been set.

⬜⬜ 5_ΓE⬜
⬜⬜ 5ν⬜⬜⬜
	Step SV indication
	• During program control, selects step SV indication type
	  when the SV/MV/TIME Display is switched to SV indication.
	• Selection item:
	 5ν⬜⬜⬜ : SV corresponding to the step time progress.
	        Updates step SV corresponding to the step time progress.
	 Γ5ν⬜⬜ : Step SV
	        Indicates the step SV which has been set during program
	        pattern setting.

⬜⬜ PEΓM⬜ ⬜⬜ ⬜⬜⬜⬜0	**Pattern end output time** • Sets Pattern end output time after program control is finished. If Pattern end output is selected in [Event output EV⬜ allocation], pattern end output is turned ON after program control is finished, and the SV/MV/TIME Display flashes P.ENd⬜. Setting the time to 0 (zero) seconds causes continuous output, until the $\frac{STOP}{MODE}$ key is pressed for 1 second, or until the power is turned OFF. By pressing the $\frac{STOP}{MODE}$ key for 1 second, Pattern end output is turned OFF, and the unit returns to Program control Stop (in Standby). When set to 1 to 10000 seconds: Pattern end output is automatically turned OFF after Pattern end output time has elapsed, and the unit returns to Program control Stop (in Standby). • Setting range: 0 to 10000 seconds

Character, Factory Default	Setting Item, Function, Setting Range

☐☐ *PEH*☐
☐☐ *SToP*☐
	Step SV Hold function when program ends
	• When program control ends, selects either 'Holding' or 'Not holding' of the Step SV Hold function.
	If 'Holding' is selected, the PTN Display flashes when program control ends, and control performs using the step SV of the last step.
	By pressing the $\frac{STOP}{MODE}$ key for 1 second, the Step SV Hold function is cancelled, and the unit returns to Program control Stop (in Standby).
	• **How to set program pattern when 'Holding' is selected**:
	Set the last step values (of the program pattern in the Pattern setting group – except step time), to all steps which have not been set yet.
	Set the step time to 0:00.
	• Selection item:
	  SToP☐ : Not Holding (of Step SV Hold function)
	  HoLd☐ : Holding (of Step SV Hold function)

☐☐ *rS1*☐
☐☐ *rS*☐☐☐
	Time signal output TS1 / Status (RUN) output
	• Selects either Time signal output or Status (RUN) output for Time signal output TS1.
	• Selection item:
	  rS☐☐☐ : Time signal output TS1
	  RUN☐☐ : Status (RUN) output
	   Available when Time signal output (TS option) is ordered.

☐☐ *rS2*☐
☐☐ *rS*☐☐☐
	Time signal output TS2 / Status (HOLD) output
	• Selects either Time signal output or Status (HOLD) output for Time signal output TS2.
	• Selection item:
	  rS☐☐☐ : Time signal output TS2
	  HoLd☐ : Status (HOLD) output
	   Available when Time signal output (TS option) is ordered.

☐☐ *rS3*☐
☐☐ *rS*☐☐☐
	Time signal output TS3 / Status (WAIT) output
	• Selects either Time signal output or Status (WAIT) output for Time signal output TS3.
	• Selection item:
	  rS☐☐☐ : Time signal output TS3
	  WAIT☐ : Status (WAIT) output
	   Available when Time signal output (TS option) is ordered.

☐☐ *rS4*☐
☐☐ *rS*☐☐☐
	Time signal output TS4 / Status (FAST) output
	• Selects either Time signal output or Status (FAST) output for Time signal output TS4.
	• Selection item:
	  rS☐☐☐ : Time signal output TS4
	  FASt☐ : Status (FAST) output
	   Available when Time signal output (TS option) is ordered.

Character, Factory Default	Setting Item, Function, Setting Range

`⊡⊡` `rチ5チ⊡`
`⊡⊡` `rチ⊡⊡⊡`
	Time signal output TS5 / Status (STOP) output
	• Selects either Time signal output or Status (STOP) output for Time signal output TS5.
	• Selection item:
	  `rチ⊡⊡⊡` : Time signal output TS5
	  `チ⌐oP⊡` : Status (STOP) output
	_{Available when Time signal output (TS option) is ordered.}

`⊡⊡` `oチFN⊡`
`⊡⊡` `oFF⊡⊡`
	Overshoot suppression Enabled/Disabled
	• Selects overshoot suppression Enabled/Disabled.
	• Selection item:
	  `oFF⊡⊡` : Disabled
	  `oN⊡⊡⊡` : Enabled

`⊡⊡` `oチF⊡⊡`
`⊡⊡` `⊡⊡⊡ 10`
	Overshoot suppression factor
	• Sets overshoot suppression factor.
	[Overshoot suppression factor]
	  When overshoot or undershoot occurs at the step change point during program control, if overshoot suppression factor is set, overshoot or undershoot can be suppressed at the step change point.
	  If overshoot occurs as ①, makes the overshoot suppression factor larger.
	  When it takes time until control is stabilized as ②, makes the factor smaller.
	
	(Fig. 7.5.7-3)
	
	• Setting range:
	  0.1 to 10.0
	_{Available when Enabled is selected in [Overshoot suppression Enabled/Disabled].}

`⊡⊡` `EoUr⊡`
`⊡⊡` `oFF⊡⊡`
	Output status when input errors occur
	• Selects output status when input errors (overshoot or undershoot) occur.
	• Selection item:
	  `oFF⊡⊡` : Output OFF
	  `oN⊡⊡⊡` : Output ON
	_{Available only for controllers using direct current and voltage inputs, and direct current output.}

`⊡⊡` `bKLr⊡`
`⊡⊡` `RLL⊡⊡`
	Backlight selection
	• Selects the display to backlight.
	• Selection item:
	  `RLL⊡⊡` : All are backlit.
	  `Pレ⊡⊡` : PV Display is backlit.

Character, Factory Default	Setting Item, Function, Setting Range

▢▢ *cLRC*▢
▢▢ ▢▢▢*5.0*
	PV color range
	• Sets PV color range depending on the user setting.
	• Setting range:
	   Thermocouple, RTD input: 0.1 to 200.0℃ (℉)
	   DC voltage, current input: 1 to 2000 (The placement of the decimal point follows
	                       the selection.)
	   Available when *PVCR*▢ (PV color changes continuously) or *APCR*▢[PV color
	   changes continuously + Any alarm (EV1 to EV4) is ON: Red] is selected in [PV color].

▢▢ *dPrM*▢
▢▢ ▢▢▢▢*0*
	Backlight time
	• Sets time to backlight.
	  Sets backlight time from no operation status until backlight is switched off.
	  When set to 0, the backlight remains ON.
	  Backlight relights by pressing any key while backlight is OFF.
	• Setting range:
	   0 to 99 minutes

At this stage, settings of Other parameters setting group are complete.

If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to the Engineering setting group.

By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.6 Auto/Manual Control Switch Group

In Auto/Manual control switch group, Auto/Manual control can be switched.

· To Enter the Auto/Manual control switch group
Press the $\frac{SET}{RST}$ key once in RUN mode, and press the $\frac{STOP}{MODE}$ key 5 times. The PV Display indicates
$\square\_MRN$, and the unit enters the Auto/Manual control switch group in Group selection mode.
Press the $\frac{HOLD}{ENT}$ key in the Auto/Manual control switch group. The PV Display indicates $MRNU\square$
and the unit enters 'Auto/Manual control switch'.

· Explanation of Setting Item
Upper left: PTN Display, PV Display
      The PTN Display is unlit, and the PV Display indicates setting item characters.
Lower left: STEP Display, SV/MV/TIME Display
      The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default.
Right side: Indicates the setting item, explanation of its function, and setting range.

| PTN Display | PV Display | Setting item, function, setting range (or selection item) |

```
☐☐  MRNU☐    Auto/Manual control switch
☐☐  RUⴘo☐    • Switches automatic or manual control.
              • Selection item:
                 RUⴘo☐ : Automatic control
```

| STEP Display | SV/MV/TIME Display |
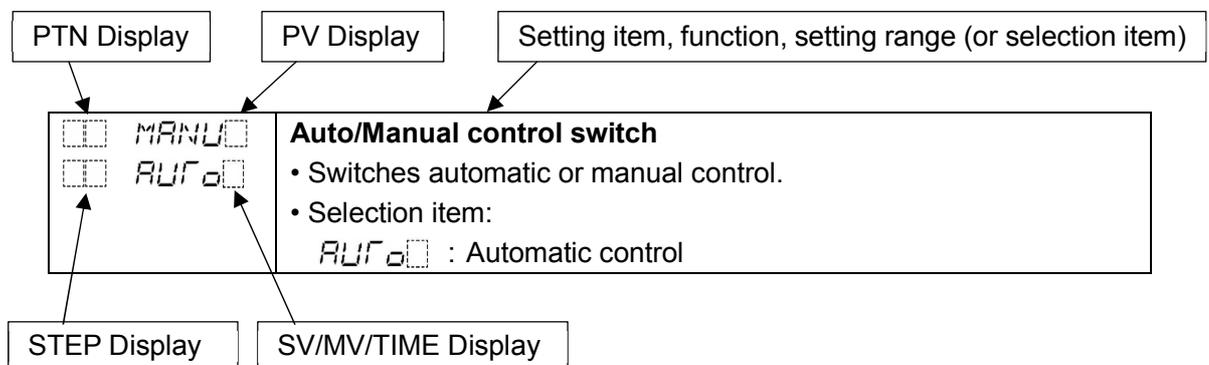

Setting item in Auto/Manual control switch group is shown below.

Character, Factory Default	Setting Item, Function, Setting Range

☐☐ MRNU☐
☐☐ RUⴘo☐
	Auto/Manual control switch
	• Switches automatic or manual control.
	  If control action is switched from automatic to manual and vice versa,
	  balanceless-bumpless function works to prevent a sudden change in MV.
	  When control action is switched to manual control, the MAN and MV
	  indicators light up, the STEP Display indicates M, and the SV/MV/TIME
	  Display indicates the manual MV.
	  Manual MV can be set with the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key.
	  If control action is switched to automatic control, the SV/MV/TIME Display
	  shows SV.
	• Selection item:
	    RUⴘo☐ : Auto (Automatic control)
	    MRNU☐ : Manual (Manual control)

At this stage, settings of Auto/Manual control switch group are complete.
If the $\frac{STOP}{MODE}$ and $\frac{DISP}{B.MODE}$ keys are pressed at the same time, the unit returns to Group selection mode.
By pressing the $\frac{SET}{RST}$ key, the unit returns to RUN mode.

7.7 Clearing the Setting Data

There are 2 methods in data clearing.

• Program Clearing:

Program pattern data of the selected step and all the following steps within the program pattern will be removed.

• Data Clearing:

All setting data – except Input type, OUT1 proportional cycle, OUT2 proportional cycle – will be cleared. Once data is mistakenly cleared, data should be entered again. Cleared data cannot be restored.

Clearing methods are shown below.

• Program Clearing

When program control is stopped (in Standby), and if the RUN key is pressed for 3 seconds at any items in Pattern setting group, program pattern data (for current step on the STEP Display and all the following steps) will return to the factory default.

(e.g.)

To clear the program pattern data of Pattern 1 Step 3 and all the following steps:

Keep pressing the RUN key for approx. 3 seconds at any setting items of Pattern 1 Step 3.
All data of Pattern 1 Steps 3 to 15 will be cleared.
All data of Pattern 1 Steps 0 to 2 will not be cleared.
All data of Pattern 0 and Patterns 2 to 15 will not be cleared either.

• Data Clearing

When program control is stopped (in Standby), and if the $\frac{PTN}{\blacktriangle}$, $\frac{ADV}{\blacktriangledown}$ and $\frac{DISP}{B.MODE}$ keys are pressed for approx. 3 seconds, the PV Display indicates cLR, and all setting values – except Input type, OUT1 proportional cycle, OUT2 proportional cycle – will return to the factory default values. It takes approximately 30 seconds for data clear.

After data clearing is compete, cLR on the PV Display will disappear, and the unit will return to Program control Stop (in Standby).

8. Operation

8.1 Performing Program Control

8.1.1 Performing Program Control

(1) Before turning the power ON

Check Sections "3. Mounting to the Control Panel (pp.12, 13)" and "4. Wiring (p.14 to 23)" before turning the power ON.

(2) After turning the power ON

Set necessary items after turning the power ON.
Refer to Sections "5. Outline of Key Operation and Explanation of Groups (pp.24 to 29)", "6. Basic Operating Procedure after Power ON and Setting Examples (pp.30 to 42)" and "7. Setting Items (pp.43 to 95)".

(3) Selecting a pattern number to perform

There are 2 methods for selecting a pattern number to perform:
Using the $\frac{PTN}{▲}$ key, or using Event input
Pattern numbers selected by Event input have priority over pattern numbers selected by the $\frac{PTN}{▲}$ key.
To select pattern numbers by keypad, make sure all Event inputs are in OFF (Open) status.

• Using the $\frac{PTN}{▲}$ key

Select a pattern from 0 – 15 in Program control Stop (in Standby) with the $\frac{PTN}{▲}$ key.

• Using Event input

Select a pattern from 1 – 15, depending on Closed (ON) or Open (OFF) status of any terminal (Event input DI1 to DI4) and the COM terminal.

If Serial communication (C or C5 option) is ordered, only Event input DI1 and DI2 can be used. Select a pattern from 1 – 3 by means of Closed (ON) or Open (OFF) status of any terminal (Event input DI1 or DI2) and the COM terminal.
To select a pattern from 4 – 15, press the $\frac{PTN}{▲}$ key.

Level action is used to determine ON or OFF.
When power is turned ON, level action is engaged.

Event Input DI1 to DI4:

Select a performing pattern by closing any one terminal (DI1 to DI4) and the COM terminal.
●: Close any one terminal (DI1 – DI4) and the COM terminal.
(e.g.) To select pattern 7 to perform, close ⑪ & ⑮, close ⑫ & ⑮, and close ⑬ & ⑮.

(Table 8.1.1-1)

Pattern No. / Terminal No.	*	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
⑪ DI1		●		●		●		●		●		●		●		●
⑫ DI2			●	●			●	●			●	●			●	●
⑬ DI3					●	●	●	●					●	●	●	●
⑭ DI4									●	●	●	●	●	●	●	●

* This pattern number is selected via the keypad.

Event Input DI1 and DI2:

Select a performing pattern by closing any one terminal (DI1 or DI2) and the COM terminal.

●: Close DI1 or DI2 terminal and the COM terminal.

(e.g.) To select pattern 3 to perform, close ⑪ & ⑮, and close ⑫ & ⑮.

(Table 8.1.1-2)

Pattern No. / Terminal No.	*	1	2	3
⑪ DI1		●		●
⑫ DI2			●	●

* This pattern number is selected via the keypad.

(4) Perform Program Control

Automatic or manual start can be selected to perform program control.

Factory default value: Manual start

Manual start: When power is turned ON, and when in Program control Stop (in Standby) status, the program pattern selected at (3) is performed from Step 0, by pressing the RUN key.

Automatic start: When power is turned ON, the program pattern selected at (3) is automatically performed from Step 0.

For Manual start, there are 2 ways to start program control:
Using the RUN key, or using External operation input.

• Using the RUN key

Press the RUN key in Program control Stop (in Standby).

Program control starts.

• Using External operation input

Close terminals ㉖(RUN) and ㉗(COM) of External operation input.
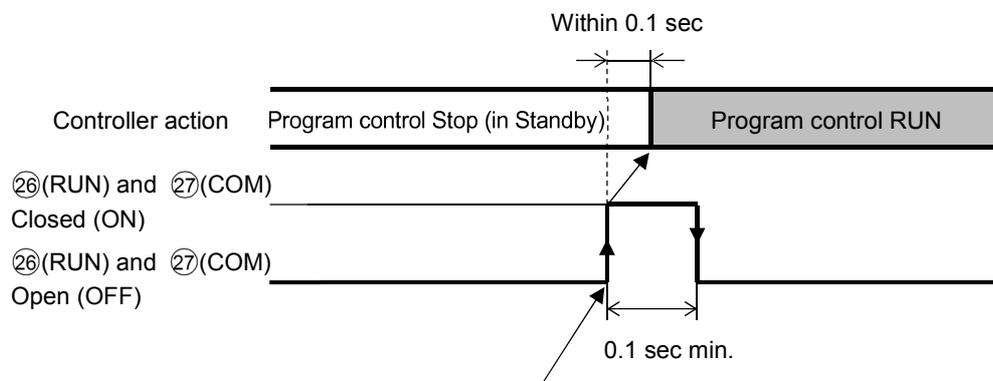

Program control starts.

(Fig. 8.1.1-1)

[Program control start type]

Program control start type can be selected in [Program control start type].

PV start:

Only when program control starts, step SV and step time are advanced to the PV, then program control starts.

However, if step SV at the time of program control start is higher than the PV (when PV start is initiated), then program control will start from the SV set in [Step SV when program control starts].

100℃

25℃

Time

1:00

0:45

PV start point
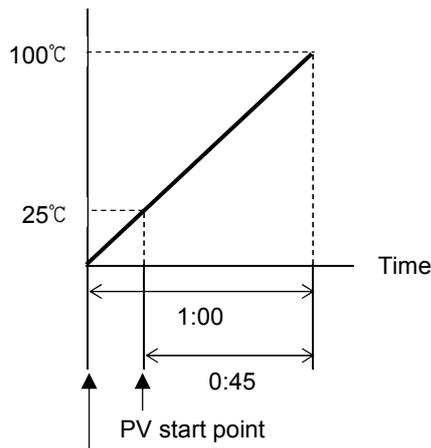

When program control starts,
step SV is advanced to PV (25℃).

(Fig. 8.1.1-2)

PVR start:

When program control starts and in pattern repeating, the step SV and step time are advanced to the PV, then the program control starts.

Action is the same as that of PV start. Refer to (Fig. 8.1.1-2).

SV start:

Program control starts from the SV set in [Step SV when program control starts].

100℃

Time

1:00

Program control starts.
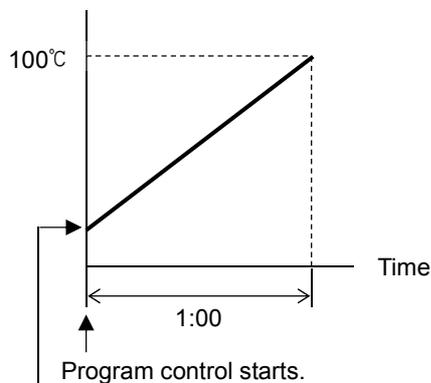

Program control starts from the SV set in
[Step SV when program control starts].

(Fig. 8.1.1-3)

[Power Restore Action]

If power fails during program control, the controller can be operated depending on the selection in [Power restore action].

Progressing time error when power is restored: 1 minute

• Stops after power is restored:
    After power is restored, stops program control, and returns to Standby mode.

• Continues after power is restored:
    After power is restored, continues (Resumes) program control.

• Suspends after power is restored:
    After power is restored, suspends (on hold) current program, and performs Fixed value control using the step SV from the point of suspension.
    Pressing the RUN key cancels suspension, and program control resumes.

[Wait function]

While program control is running, the program does not proceed to the next step
until the deviation between PV and SV enters SV±Wait value at the end of step.
The STEP Display flashes while the Wait function is working.

Explanation of Wait function

• When program pattern is rising:
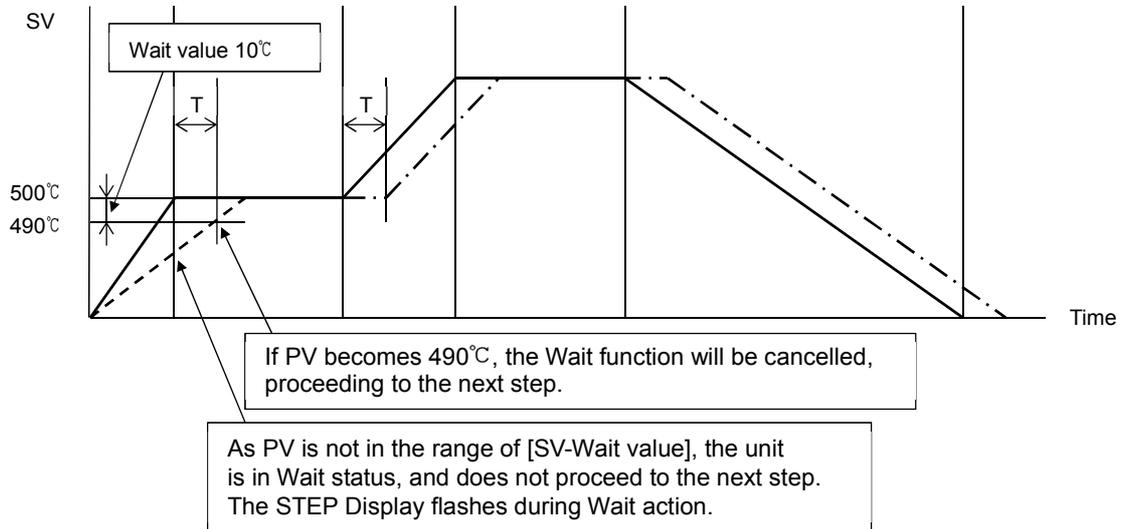

(Fig. 8.1.1-4)

• When program pattern is falling:
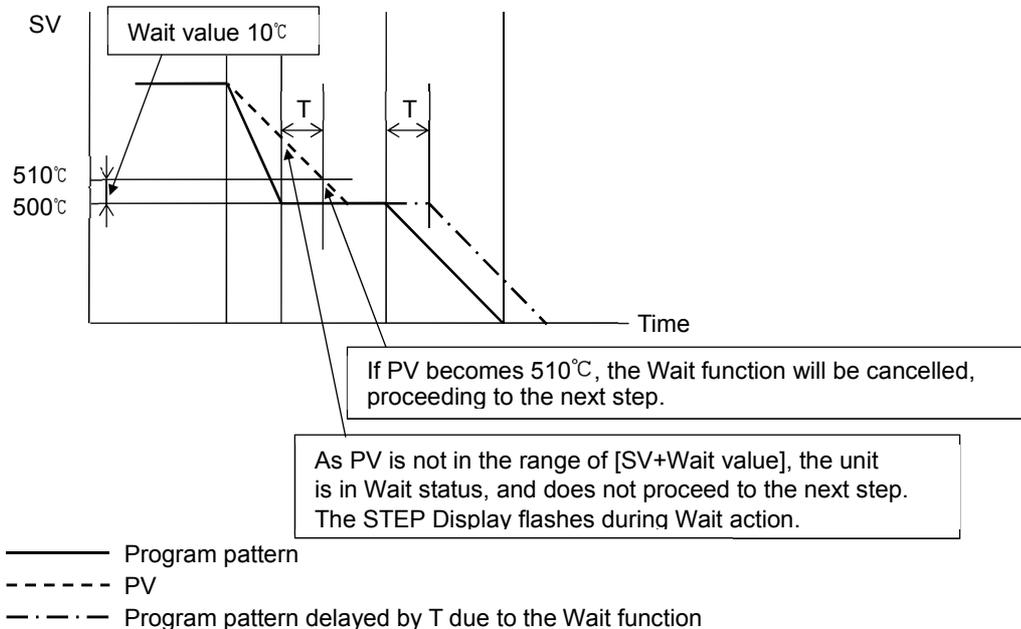

(Fig. 8.1.1-5)

• How to cancel the Wait function

Press the $\frac{ADV}{\blacktriangledown}$ or $\frac{STOP}{MODE}$ key to cancel the Wait function.

The Wait function can also be cancelled by [ADV] input or [STOP] input of External operation.

8.1.2 Stopping Program Control

To stop program control, press the $\frac{STOP}{MODE}$ key, or use External operation input.

• Using the $\frac{STOP}{MODE}$ key

Press the $\frac{STOP}{MODE}$ key for approximately 1 second during program control.
Program control will stop.

• Using External operation input

Close terminals ㉓(STOP) and ㉗(COM) of External operation input.
Program control will stop.

Within 0.1 sec

| Controller action | Program control RUN | Program control Stop (in Standby) |

㉓(STOP) and ㉗(COM)
Closed (ON)

㉓(STOP) and ㉗(COM)
Open (OFF)

0.1 sec min.
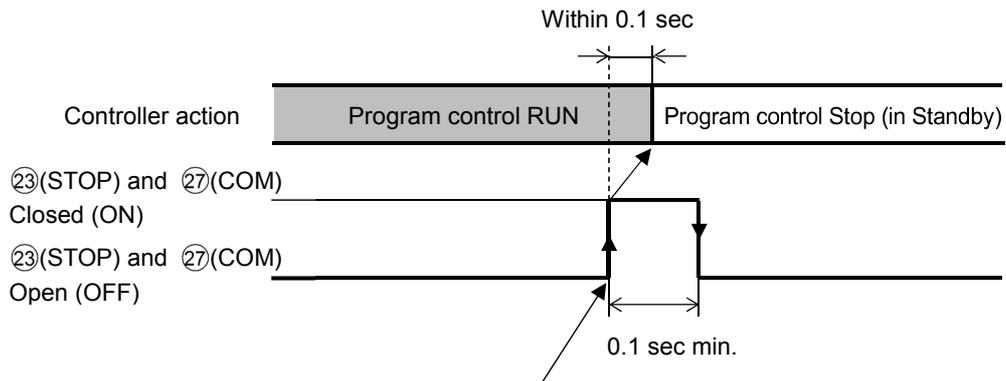

Program control stops by detecting signal edge action from OFF to ON of terminals ㉓ (STOP) and ㉗ (COM).

(Fig. 8.1.2-1)

8.1.3 Suspending Program Control (Hold Function)

During program control, progress of current step can be suspended (paused).
Pressing the RUN key cancels suspension, and program control resumes.
During manual control, suspension cannot be cancelled.

To suspend program control, there are 2 methods:
Using the $\frac{HOLD}{ENT}$ key, or using External operation input

• Using the $\frac{HOLD}{ENT}$ key

Press the $\frac{HOLD}{ENT}$ key during program control.
Progress of current step is suspended, and then Fixed value control is performed using the SV from the point of suspension.
The HOLD indicator flashes.

• Using External operation input

Close terminals ㉔(HOLD) and ㉗(COM) of External operation input.
Progress of current step is suspended, and then Fixed value control is performed using the SV at the point of suspension.
The HOLD indicator flashes.
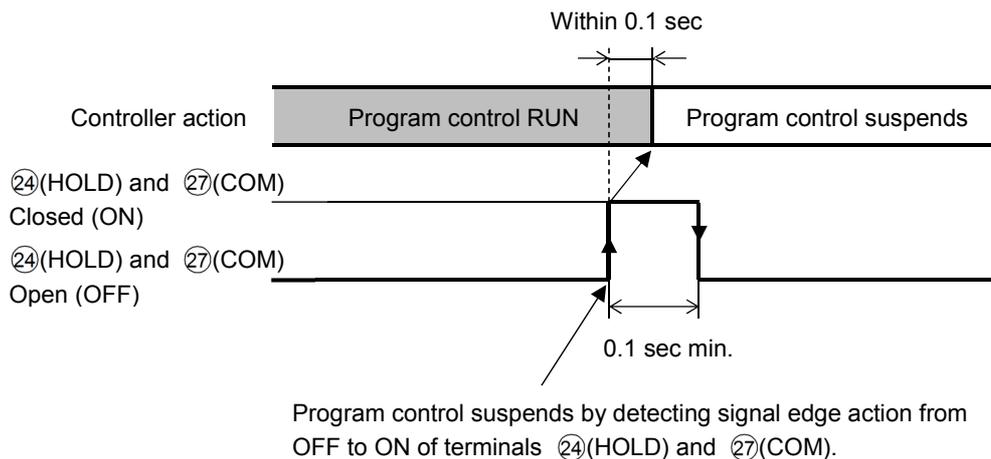

(Fig. 8.1.3-1)

8.1.4 Advancing Program Step (Advance Function)

Interrupts current step while program control is running, and proceeds to the beginning of the next step.

If the Wait function is working, the Wait function is cancelled, and proceeds to the beginning of the next step.

To advance program step, there are 2 methods:
   Using the $\frac{ADV}{\blacktriangledown}$ key, or using External operation input

• Using the $\frac{ADV}{\blacktriangledown}$ key

Press the $\frac{ADV}{\blacktriangledown}$ key during program control.

Current step is stopped, and the unit proceeds to the beginning of the next step.

Each time the $\frac{ADV}{\blacktriangledown}$ key is pressed, the unit proceeds to the next step.

• Using External operation input

Close terminals ㉕(ADV) and ㉗(COM) of External operation input.

Current step is stopped, and the unit proceeds to the beginning of the next step.

Each time terminals ㉕ (ADV) and ㉗ (COM) are open and closed, the unit proceeds to the next step.
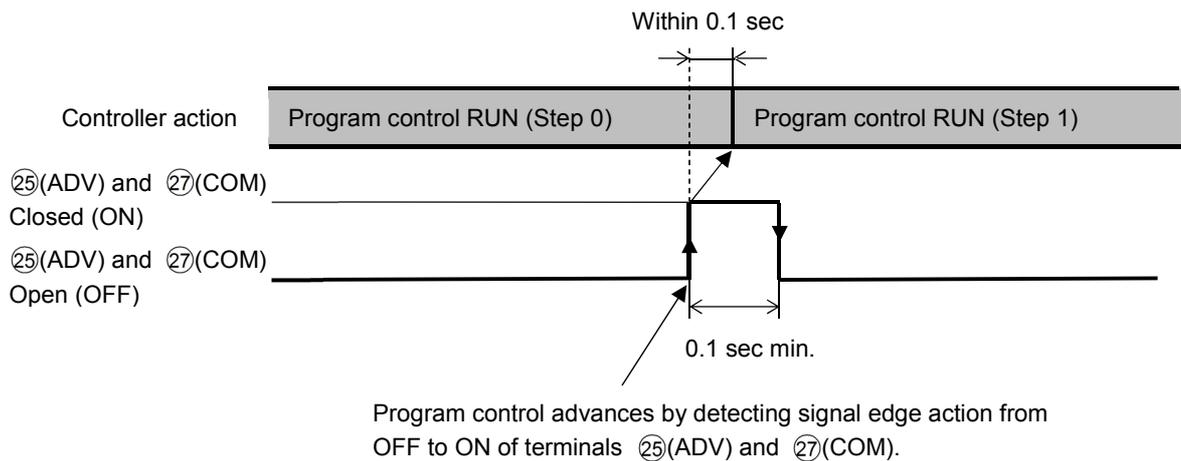

(Fig. 8.1.4-1)

8.1.5 Returning to Previous Program Step (Return-to-Previous Function)

Stops the current step in program control, and returns to the previous step.

If the elapsed time of the current step is less than 1 minute, the program control returns to the beginning of the previous step.

If the elapsed time of the current step is longer than 1 minute, the program control returns to the beginning of the current step.

When this function is executed at Step 0 of starting pattern, this function is disabled, but returns to the beginning of Step 0.

To return to the previous step, press $\underline{\overset{PTN}{\blacktriangle}}$ and $\underline{\overset{ADV}{\blacktriangledown}}$ keys (in that order) together.

Current step stops, and the unit returns to the previous step or the beginning of the current step.

8.1.6 Speeding up Program Step Time (Step Time Speed-up Function)

To make program step time progress faster, press the $\frac{FAST}{\blacktriangleleft FAST \blacktriangleright}$ key.

Pressing the $\frac{FAST}{\blacktriangleleft FAST \blacktriangleright}$ key makes the step time progress 60 times faster.

If the Wait function is set, this function will be disabled as the Wait function has priority.

8.1.7 Changing Program Step SV and Step Time

When step SV and step time are changed during program control, they will change as follows.

• When changing step SV from 500 to 700℃
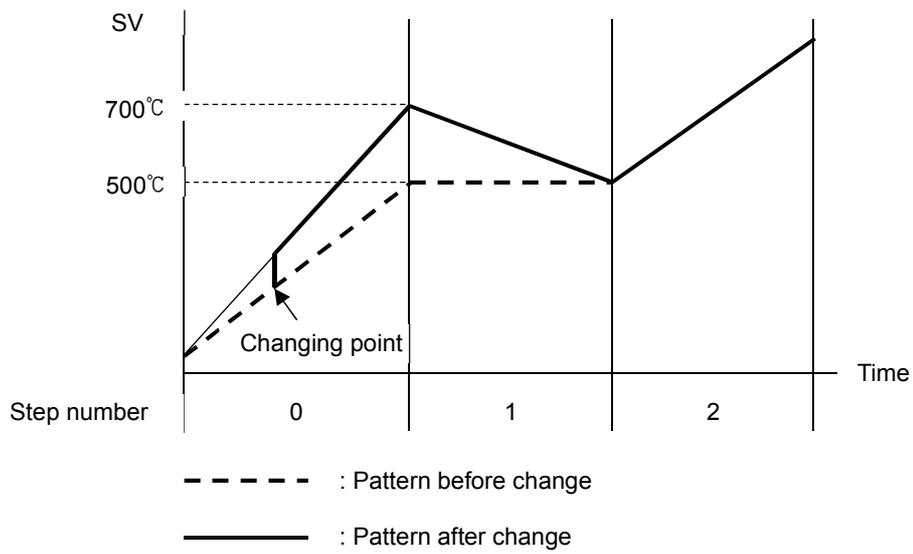

(Fig. 8.1.7-1)

• When changing step time from 0:30 to 0:50
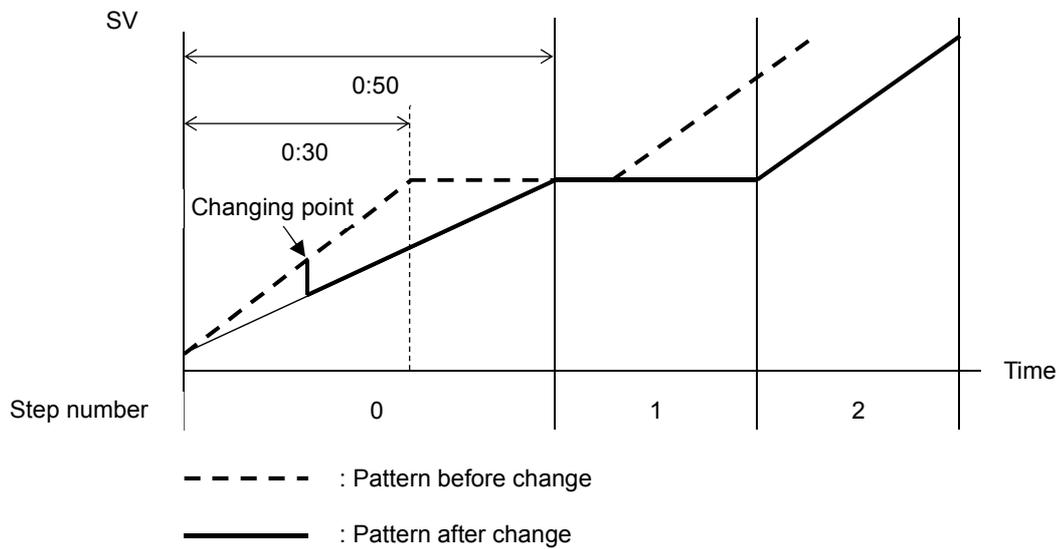

(Fig. 8.1.7-2)

8.1.8 Ending Program (Pattern End Function)

If Pattern end output is selected in [Event output EV☐ allocation], Pattern end output is turned ON after program control is finished, and the SV/MV/TIME Display flashes $P.ENd$.

By pressing the $\frac{STOP}{MODE}$ key for approximately 1 second, Pattern end output is turned OFF, and the unit returns to Program control Stop (in Standby).

If Pattern end output time is set, Pattern end output is automatically turned OFF after Pattern end output time has expired. And the unit returns to Program control Stop (in Standby).

[Step SV Hold function when program ends]

If 'Holding' is selected in [Step SV Hold function when program ends], the PTN Display flashes when program control ends, and control performs using the step SV of the last step.

By pressing the $\frac{STOP}{MODE}$ key for approximately 1 second, this function will be cancelled, and the unit returns to Program control Stop (in Standby).

If 'Holding' is selected in [Step SV Hold function when program ends] when program control ends, the PTN Display flashes, and control is performed using the step SV of the last step.

If 'Not Holding' is selected in [Step SV Hold function when program ends] while Step SV Hold function is working, the program will be forced to stop.

If Pattern end output is selected in [Event output EV☐ allocation], Pattern end output is turned ON after program control is finished, and the SV/MV/TIME Display flashes $P.ENd$.

8.2 Performing Fixed Value Control

8.2.1 Performing Fixed Value Control

Fixed value control (control action that indicating controllers are performing) is performed using the set step SV.

To perform Fixed value control, set the step time (of the desired step SV) to ⌐-⌐-⌐-⌐

(e.g.) Set the step SV (of Pattern 0, Step 0) to 500℃, and set the step time to ⌐-⌐-⌐-⌐

Press the RUN key. Fixed value control is performed at 500℃.

(1) Before turning the power ON

Check Sections "3. Mounting to the Control Panel (pp.12, 13)" and "4. Wiring (pp.14 to 23)" before turning the power ON.

(2) After turning the power ON

Set necessary items after turning the power ON.

Refer to Sections "5. Outline of Key Operation and Explanation of Groups (pp.24 to 29)", "6. Basic Operating Procedure after Power ON and Setting Examples (pp.30 to 42)" and "7. Setting Items (pp.43 to 95)".

To perform Fixed value control. set the step SV and step time for the desired pattern.

To set the step time, press the ADV▼ key at 0:00. ⌐-⌐-⌐-⌐ will be selected.

Select the PID block number, Alarm block number and Output block number.

During Fixed value control, Time signal block number and Wait block number are disabled.

(3) Selecting a pattern number to perform

There are 2 methods for selecting a pattern number to perform:

Using the PTN▲ key, or using Event input

Pattern numbers selected by Event input have priority over pattern numbers selected by the PTN▲ key.

To select pattern numbers by keypad, make sure all Event inputs are in OFF (Open) status.

• Using the PTN▲ key

Select a pattern from 0 – 15 for which step time is set to ⌐-⌐-⌐-⌐ at (2) in Program control Stop (in Standby), using the PTN▲ key.

• Using Event input

Select a pattern from 1 – 15 for which step time is set to ⌐-⌐-⌐-⌐ at (2), depending on Closed (ON) or Open (OFF) status of any terminal (DI1 to DI4) and the COM terminal.

If Serial communication (C or C5 option) is ordered, only Event input DI1 and DI2 can be used. Select a pattern from 1 – 3 for which step time is set to ⌐-⌐-⌐-⌐ at (2), by means of Closed (ON) or Open (OFF) status of DI1 or DI2 terminal and the COM terminal.

To select a pattern from 4 – 15, press the PTN▲ key.

Level action is used to determine ON or OFF.

When power is turned ON, level action is engaged.

Event Input DI1 to DI4:

Select a pattern for which step time is set to ⌐-⌐-⌐-⌐ at (2), by closing any one terminal (DI1 – DI4) and the COM terminal.

●: Close any one terminal (from DI1 – DI4) and the COM terminal.

(e.g.) To select Pattern 7 to perform, close ⑪ & ⑮, close ⑫ & ⑮, and close ⑬ & ⑮ respectively.

(Table 8.2.1-1)

Pattern No. / Terminal No.	*	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
⑪ DI1		●		●		●		●		●		●		●		●
⑫ DI2			●	●			●	●			●	●			●	●
⑬ DI3					●	●	●	●					●	●	●	●
⑭ DI4									●	●	●	●	●	●	●	●

* This pattern number is selected via the keypad.

Event Input DI1 and DI2:

Select a pattern for which step time is set to ⌐-⌐-⌐-⌐ at (2), by closing DI1 or DI2 terminal and the COM terminal.

●: Close DI1 or DI2 terminal and the COM terminal.

(e.g.) To select Pattern 3 to perform, close ⑪ & ⑮, and close ⑫ & ⑮ respectively.

(Table 8.2.1-2)

Pattern No. / Terminal No.	*	1	2	3
⑪ DI1		●		●
⑫ DI2			●	●

* This pattern number is selected via the keypad.

(4) Execute Fixed Value Control

There are 2 ways to execute Fixed value control:

   Using the RUN key, or using External operation input

• Using the RUN key.

Press the RUN key in Program control Stop (in Standby).

The step, for which step time is set to ⌐-⌐-⌐-⌐ at (2), is held, and

Fixed value control is performed using step SV.

The RUN indicator flashes during Fixed value control.

• Using External operation input

Close terminals ㉖(RUN) and ㉗(COM) of External operation input.

The step, for which step time is set to ⌐-⌐-⌐-⌐ at (2), is held, and

Fixed value control is performed using step SV.

The RUN indicator flashes during Fixed value control.
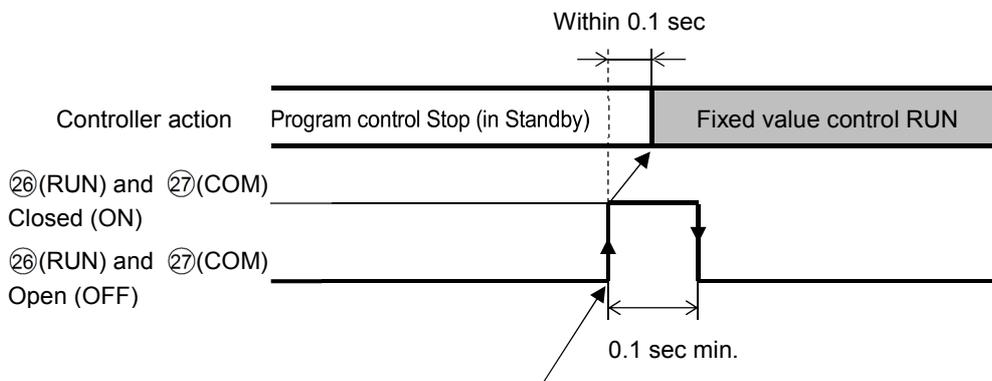

(Fig. 8.2.1-1)

8.2.2 Finishing Fixed Value Control

There are 2 ways to finish Fixed value control:

Using the $\frac{STOP}{MODE}$ key, or using External operation input

• Using the $\frac{STOP}{MODE}$ key

Press the $\frac{STOP}{MODE}$ key for approximately 1 second during Fixed value control.

Fixed value control will stop, and the unit will revert to Program control Stop (in Standby).

• Using External operation input

Close terminals ㉓(STOP) and ㉗(COM) of External operation input.

Fixed value control will stop, and the unit will revert to Program control Stop (in Standby).

Within 0.1 sec

| Controller action | Fixed value control RUN | Fixed value control is finished. |

㉓(STOP) and ㉗(COM) Closed (ON)

㉓(STOP) and ㉗(COM) Open (OFF)

0.1 sec min.

Fixed value control is finished by detecting signal edge action from OFF to ON of terminals ㉓(STOP) and ㉗(COM).
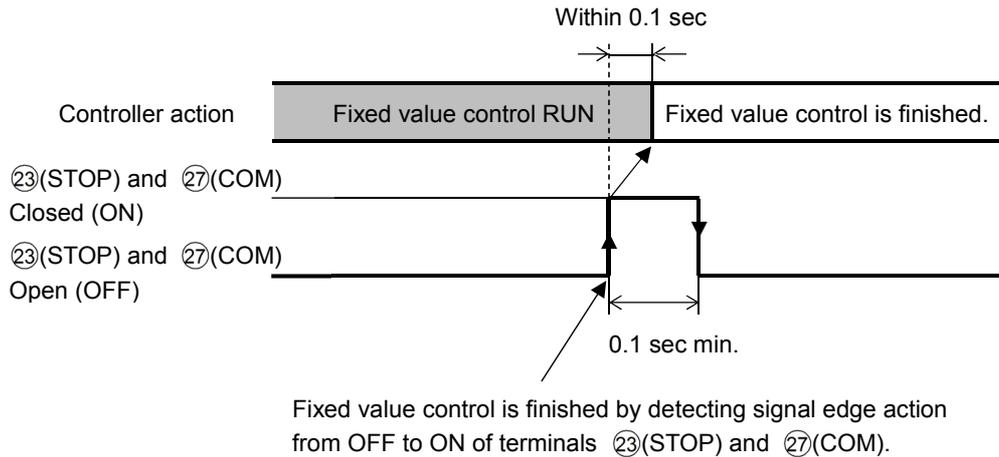

(Fig. 8.2.2-1)

8.3 Switching Auto/Manual Control

Auto/Manual control can be selected in [Auto/Manual control switch] in the Auto/Manual control switch group.

If control action is switched from automatic to manual and vice versa, balanceless-bumpless function works to prevent a sudden change in MV.

• When control action is switched from automatic to manual, the MV before switching will become the default value for the manual control.

• When control action is switched from manual to automatic, the MV before switching will become the default value for the automatic control.

8.3.1 Switching to Manual Control

To switch to Manual control, select "$MANU$ (Manual)" in [Auto/Manual control switch], and press the $\frac{SET}{RST}$ key.

When control action is switched to manual, the MAN and MV indicators light up, the STEP Display indicates M, and the SV/MV/TIME Display indicates the MV.

To increase or decrease the MV, use the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key.
Pressing the $\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$ key and $\frac{FAST}{\blacktriangleleft FAST \blacktriangleright}$ keys at the same time, makes MV change faster.

MV setting range:
  When control action is switched to Manual during Program control Stop (in Standby):
    [Output block 0 OUT1 low limit] to [Output block 0 OUT1 high limit]
      If D☐ option is ordered: – [Output block 0 OUT2 high limit] to [Output block 0 OUT1 high limit]
        [D☐ option (DR, DS, DA option): Heating/Cooling control output OUT2]

  When control action is switched to Manual during program control:
    [OUT1 low limit of running step output block number] to
    [OUT1 high limit of running step output block number]
      If D☐ option is ordered: – [OUT2 high limit of running step output block number] to
                                [OUT1 high limit of running step output block number]
        [D☐ option (DR, DS, DA option): Heating/Cooling control output OUT2]

Performs Manual control using the increased/decreased MV.

Basic Procedure	Setting Details	
Power ON	Power ON	
RUN mode	25	RUN mode [Program control Stop (in Standby)]
	$\frac{SET}{RST}$	
	G_PTN	Pattern setting group
	$\frac{STOP}{MODE}$ (5 times)	
Auto/Manual control switch group	G_MAN	Auto/Manual control switch group
	$\frac{HOLD}{ENT}$	
	$MANU$ / $AUTo$	Auto/Manual control switch
	$\frac{PTN}{\blacktriangle}$	
	$MANU$ / $MANU$	Auto/Manual control switch Manual control
	$\frac{SET}{RST}$	
Manual control	25 / 0.0	Manual control The MAN and MV indicators light, and the STEP Display indicates M.
	$\frac{PTN}{\blacktriangle}$ or $\frac{ADV}{\blacktriangledown}$	
	25 / 30.0	Manual control (e.g.) 30.0%

8.3.2 Switching to Automatic Control

To switch to Automatic control, select "$AUTo$ (Automatic)" in [Auto/Manual control switch], and press the SET/RST key.

When control action is switched to automatic, the SV/MV/TIME Display shows SV.

Basic Procedure	Setting Details	
Manual control	⬚⬚⬚25 ⬚⬚30.0	Manual control (e.g.) 30.0%

8.4 Switching the SV/MV/TIME Display

To switch the SV/MV/TIME Display, use the $\frac{DISP}{B.MODE}$ key.

Each time the $\frac{DISP}{B.MODE}$ key is pressed, the display and indicators change as follows.

[Program control]

The SV indicator lights.	The SV/MV/TIME Display indicates step SV.
$\frac{DISP}{B.MODE}$	
The MV indicator lights (OUT1).	The SV/MV/TIME Display indicates OUT1 MV.
$\frac{DISP}{B.MODE}$	
The MV indicator flashes (OUT2).	The SV/MV/TIME Display indicates OUT2 MV. When Heating/Cooling control (DR, DS or DA option) is ordered.
$\frac{DISP}{B.MODE}$	
The TIME indicator lights.	The SV/MV/TIME Display indicates step time.
$\frac{DISP}{B.MODE}$	

[Fixed value control]

The SV indicator lights.	The SV/MV/TIME Display indicates SV.
$\frac{DISP}{B.MODE}$	
The MV indicator lights (OUT1).	The SV/MV/TIME Display indicates OUT1 MV.
$\frac{DISP}{B.MODE}$	
The MV indicator flashes (OUT2).	The SV/MV/TIME Display indicates OUT2 MV. When Heating/Cooling control (DR, DS or DA option) is ordered.
$\frac{DISP}{B.MODE}$	
The TIME indicator lights.	The SV/MV/TIME Display indicates -:-:-:-.
$\frac{DISP}{B.MODE}$	

8.5 Performing AT

8.5.1 Notice when Performing AT

• Perform the AT during the trial run.

• AT will be disabled if L o c k (Lock) is selected in [Set value lock].

• During AT, none of the setting items – except [AT Perform/Cancel] – can be set.

• If AT is cancelled during the process, OUT1 proportional band, Integral time, Derivative time, ARW
  and OUT2 proportional band will revert to the values before AT was performed.

  AT will be forced to stop if it has not been completed within 4 hours.

  OUT1 proportional band, Integral time, Derivative time, ARW and OUT2 proportional band will revert
  to the values before AT was performed.

[Notice when performing AT during Program control RUN]

  • If AT is performed, AT starts from the AT starting point, and step time does not progress until AT
    finishes. After AT finishes, remaining step will be performed.
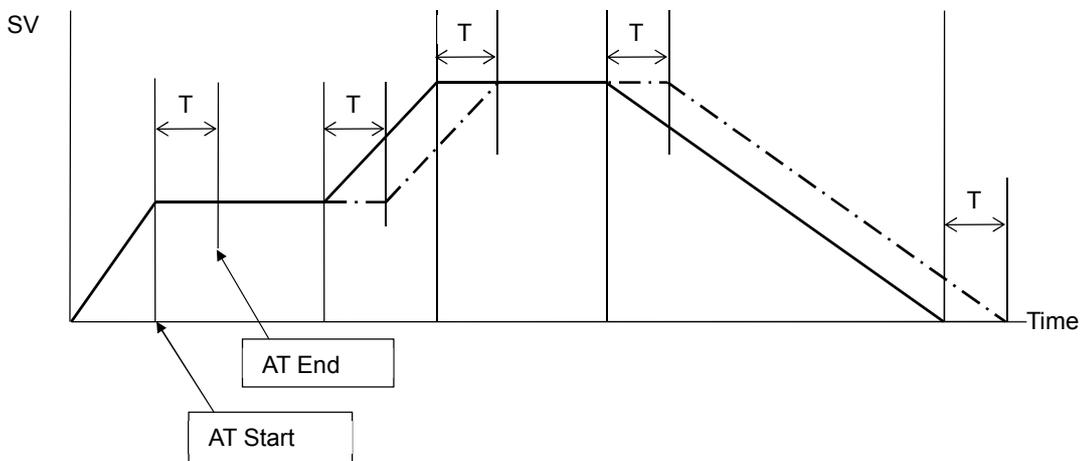

T : Time delay due to AT

———— : Program pattern before AT is performed.

— · — ·· : Program pattern after AT is performed.

(Fig. 8.5.1-1)

- 115 -

• When $NoML$ (Normal mode) is selected in [AT mode], manually perform AT for every step which has different PID block number.

• When $MULT$ (Multi mode) is selected in [AT mode], AT is automatically performed at A (a point where 90% of step progress time has elapsed at each step).
  However, when there are same PID block numbers within 1 pattern as shown in (Fig. 8.5.1-2):

    PID block 1 is used for steps 0, 1 and 4.
    PID block 2 is used for steps 2 and 3.
    AT will be performed at steps 0 and 2.
    AT will not be performed at steps 1, 3 and 4.

Step number	0	1	2	3	4
PID block number	1	1	2	2	1
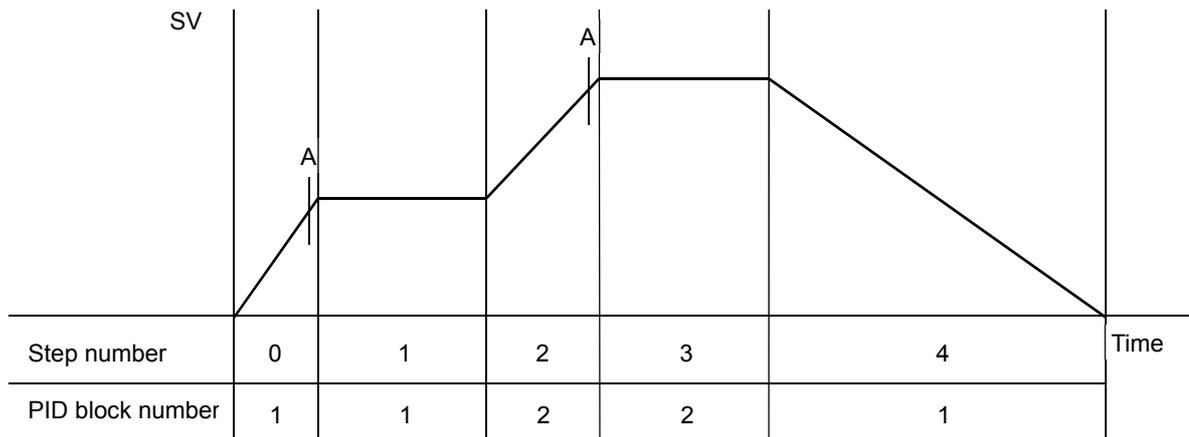

AT starts at "A".

(Fig. 8.5.1-2)

When AT is performed in Multi mode, the AT indicator lights in AT standby, and flashes while AT is performing. After AT finishes at each step, the following values are automatically set for the PID block selected for each step:

    OUT1 proportional band, Integral time, Derivative time, ARW, OUT2 proportional band

During Fixed value control, the Multi mode is disabled.

8.5.2 AT Action

In order to set each value of P, I, D and ARW automatically, the AT process should be made to fluctuate to obtain an optimal value.

For DC voltage, current inputs, the AT process will fluctuate around the SV for conditions of [A], [B] and [C] below.

One of 3 types of fluctuation below is automatically selected depending on the deviation between SV and PV.

[A] If there is a large difference between the SV and PV as the temperature is rising

When AT bias is set to 20℃, AT process will fluctuate at the temperature 20℃ lower than the SV.
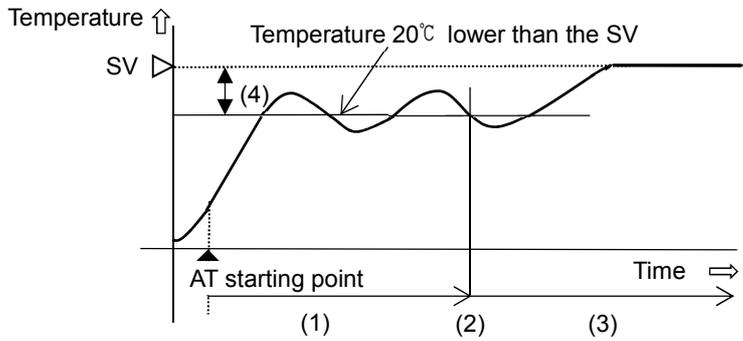

(1) Calculates PID constants.
(2) PID constants calculated
(3) Controlled by the PID constants
    set by AT
(4) AT bias value (Factory default: 20℃)

(Fig. 8.5.2-1)

[B] When the control is stable

The AT process will fluctuate around the SV.
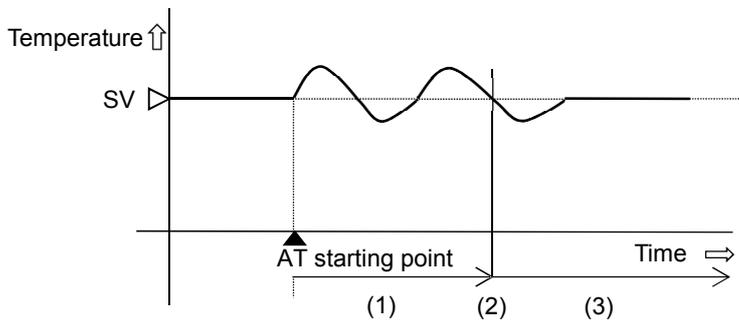

(1) Calculates PID constants.
(2) PID constants calculated
(3) Controlled by the PID constants
    set by AT

(Fig. 8.5.2-2)

[C] If there is a large difference between the SV and PV as the temperature is falling

When AT bias is set to 20℃, AT process will fluctuate at the temperature 20℃ higher than the SV.
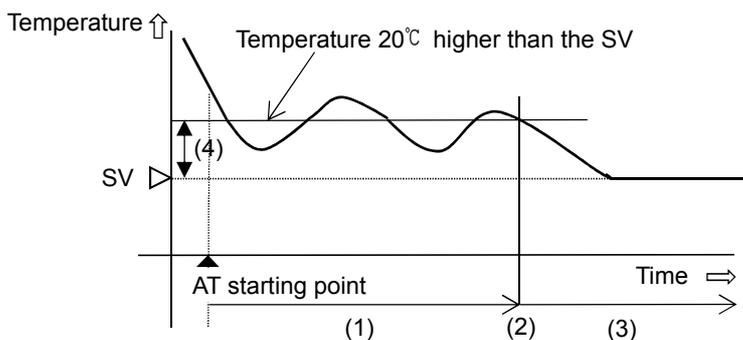

(1) Calculates PID constants.
(2) PID constants calculated
(3) Controlled by the PID constants
    set by AT
(4) AT bias value (Factory default: 20℃)

(Fig. 8.5.2-3)

8.5.3 Performing AT

To perform AT, select $Ar\square\square\square$ (AT Perform) in [AT Perform/Cancel] in the AT Perform group.
And press the SET/RST key.

Basic Procedure	Setting Details	
RUN mode	$\square\square500$ $\square\square500$	Program control RUN
	↓ SET/RST	
	C_PrN $\square\square\square\square$	Pattern setting group
	↓ STOP/MODE (3 times)

9.6 Alarm Action

• High limit alarm

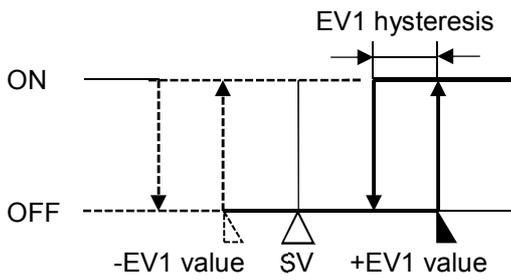

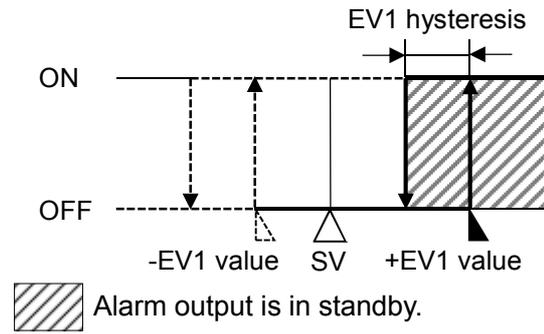

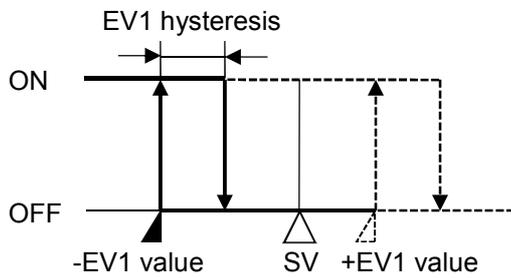

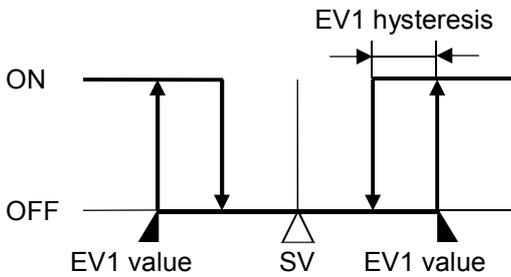

• High limit with standby alarm

Alarm output is in standby.

• Low limit alarm

• Low limit with standby alarm

Alarm output is in standby.

• High/Low limits alarm

• High/Low limits with standby alarm

Alarm output is in standby.

• High/Low limit range alarm

• High/Low limit range with standby alarm

Alarm output is in standby.
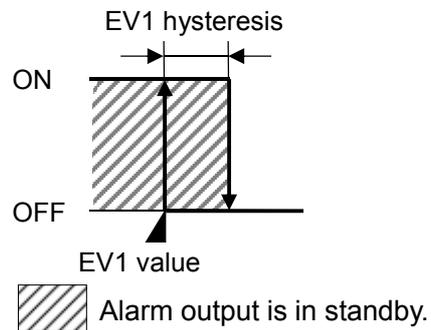

• Process high alarm

ON
OFF

EV1 hysteresis

EV1 value

• Process high with standby alarm

ON
OFF

EV1 hysteresis

EV1 value

▨ Alarm output is in standby.

• Process low alarm

ON
OFF

EV1 hysteresis

EV1 value

• Process low with standby alarm

ON
OFF

EV1 hysteresis

EV1 value

▨ Alarm output is in standby.
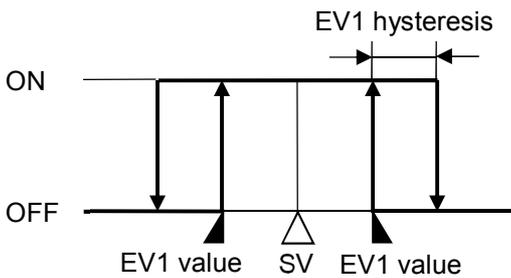

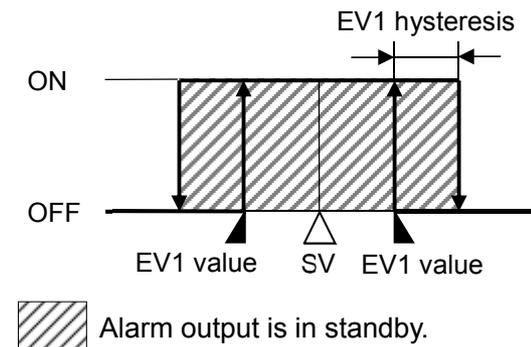

EV1 value and EV1 hysteresis represent EV1 alarm value and EV1 alarm hysteresis respectively.
The same applies to EV2, EV3 and EV4.

EVT1 indicator: Lit when EV1 terminals ⑨ and ⑩ are ON, and unlit when they are OFF.
EVT2 indicator: Lit when EV2 terminals ⑦ and ⑧ are ON, and unlit when they are OFF.
EVT3 indicator: Lit when EV3 terminals ㉙ and ㉚ are ON, and unlit when they are OFF.
EVT4 indicator: Lit when EV4 terminals ㉘ and ㉚ are ON, and unlit when they are OFF.

For the alarm types (High limit alarm, High/Low limits alarm, Process high alarm), alarm output is activated when the indication is overscale, and the standby function is released for the alarms with standby function.
For the alarm types (Low limit alarm, High/Low limits alarm, Process low alarm), alarm output is activated when the indication is underscale, and the standby function is released for the alarms with standby function.

When the alarm action De-energized is selected, the output ON/OFF status acts conversely to the alarm action described above.
(The Event indicators acts the same as the action Energized.)

	Energized	De-energized
Event indicators	Light	Light
Event output	ON	OFF

9.7 Pattern End Output

Program control RUN	Pattern end output ON	Program control Stop (in Standby)

ON

OFF

Program control ends | Press the $\frac{STOP}{MODE}$ key for approx. 1 sec.
(Pattern end output is cancelled.)

If Pattern end output is selected in [Event output EV☐ allocation], the Pattern end output turns ON after program control ends. The SV/MV/TIME Display flashes $P.ENd$.

By pressing the $\frac{STOP}{MODE}$ key for approximately 1 second, the Pattern end output is turned OFF, and the unit reverts to Program control Stop (in Standby).
If Pattern end output time is set, the Pattern end output automatically turns OFF after Pattern end output time has expired, and the unit reverts to Program control Stop (in Standby).

10. Specifications

Input

Input	Thermocouple	K, J, R, S, B, E, T, N, PL-Ⅱ, C (W/Re5-26)
		External resistance: 100 Ω max.
		However, for B input, External resistance: 40 Ω max.
	RTD	Pt100, JPt100　3-wire type
		Allowable input lead wire resistance: 10 Ω max. per wire
		However, Pt100, -100.0 to 100.0℃: 5 Ω max. per wire
	Direct current	0 to 20 mA DC, 4 to 20 mA DC
		Input impedance: 50 Ω
		Allowable input current: 100 mA max.
	DC voltage	0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC,
		0 to 1 V DC:
		Input impedance: 1 MΩ min.
		Allowable input voltage: 5 V DC max.
		Allowable signal source resistance:
		2 kΩ max. (0 to 1 V DC)
		200 Ω max. (0 to 100 mV DC, 0 to 50 mV DC)
		40 Ω max. (-10 to 10 mV DC)
		20 Ω max. (0 to 10 mV DC)
		0 to 5 V DC, 1 to 5 V DC, 0 to 10 V DC:
		Input impedance: 100 kΩ min.
		Allowable input voltage: 15 V DC max.
		Allowable signal source resistance: 100 Ω max.
Event input	Input points	Max. 4 points (When C or C5 option is ordered: 2 points)
	Circuit current when closed	Approx. 16 mA
External operation input	Input points	4 points (STOP, HOLD, ADV, RUN)
	Circuit current when closed	Approx. 16 mA
	Action	Signal edge action
		When power is turned ON, level action is engaged.

Output

Control output OUT1	Relay contact 1a 1b	Control capacity: 3 A 250 V AC (resistive load) 1 A 250 V AC (inductive load cosϕ=0.4) Electrical life: 100,000 cycles
	Non-contact voltage (for SSR drive)	12 V DC$\pm$15% Max. 40 mA (short circuit protected)
	Direct current	4 to 20 mA DC (Resolution: 12000) Load resistance: Max. 600 Ω
Event output EV1	Relay contact 1a	Control capacity: 3 A 250 V AC (resistive load) 1 A 250 V AC (inductive load cosϕ=0.4) Electrical life: 100,000 cycles
Event output EV2	Relay contact 1a	Control capacity: 3 A 250 V AC (resistive load) 1 A 250 V AC (inductive load cosϕ=0.4) Electrical life: 100,000 cycles
Event output EV3, EV4	Relay contact 1a	Control capacity: 3 A 250 V AC (resistive load) 1 A 250 V AC (inductive load cosϕ=0.4) Electrical life: 100,000 cycles Event output EV3 and EV4 share one common terminal.
Time signal output (TS option)	Number of circuits	8
	Open collector	Capacity: 24 V DC Max. 50 mA
Control output OUT2 (D□ option)	Relay contact 1a (DR option)	Control capacity: 3 A 250 V AC (resistive load) 1 A 250 V AC (inductive load cosϕ=0.4) Electrical life: 100,000 cycles
	Non-contact voltage (For SSR drive) (DS option)	12 V DC$\pm$15% Max. 40 mA (short circuit protected)
	Direct current (DA option)	4 to 20 mA DC (Resolution: 12000) Load resistance: Max. 600 Ω
Transmission output (T□ option)	Resolution	12000
	Output	TA: 4 to 20 mA DC (Load resistance: Max. 500 Ω) TV: 0 to 1 V DC (Load resistance: Min. 100 KΩ)
	Output accuracy	Within $\pm$0.3% of Transmission output span
	Response time	400 ms + Input sampling period (0%→90%)

Power supply

Power supply voltage	Model	PCA1☐00-☐☐☐	PCA1☐10-☐☐☐
	Power supply	100 to 240 V AC, 50/60 Hz	24 V AC/DC, 50/60 Hz
	Allowable voltage fluctuation	85 to 264 V AC	20 to 28 V AC/DC
Power consumption	Approx.14 VA		
Circuit insulation configuration	(Fig. 10.1-1) (*) When both OUT1 and OUT2 are a non-contact voltage output or direct current output type, OUT1 is not electrically insulated from OUT2. Insulation resistance: 10 MΩ minimum, at 500 V DC		
Dielectric strength	Between Power terminal – Ground (GND): 1.5 kV AC for 1 minute Between Input terminal – Ground (GND): 1.5 kV AC for 1 minute Between Input terminal – Power terminal: 1.5 kV AC for 1 minute		

Recommended Environment

Ambient temperature	0 to 50℃
Ambient humidity	35 to 85 %RH (Non-condensing)
Environmental specification	RoHS directive compliant

Performance

Base accuracy	Thermocouple	Within ±0.2% of each input span±1 digit However, R, S input, 0 to 200℃ (32 to 392℉): Within ±6℃ (12℉) B input, 0 to 300℃ (32 to 572℉): Accuracy is not guaranteed. K, J, E, T, N input, Less than 0℃ (32℉): Within ±0.4% of input span±1 digit
	RTD	Within ±0.1% of each input span±1 digit
	Direct current, DC voltage	Within ±0.2% of each input span±1 digit
Cold junction compensation accuracy		Within ±1℃ at 0 to 50℃
Effect of ambient temperature		Within 50 ppm/℃ of each input span
Input sampling period		125 ms
Time indication accuracy		±0.1% of setting time
Setting accuracy		Based on Base accuracy and Cold junction compensation accuracy.
Time setting accuracy		±0.1% of setting time
Setting resolution	Temperature	Thermocouple, RTD input without decimal point: 1℃ (℉) Thermocouple, RTD input with decimal point: 0.1℃ (℉) DC voltage, current input: 1
	Time	1 minute or 1 second

General Structure

Weight		Approx. 460 g
External dimensions		96 x 96 x 98.5 mm (W x H x D)
Mounting		Flush (Applicable panel thickness: 1 to 8 mm)
Case		Flame-resistant resin, Color: Black
Front panel		Membrane sheet
Drip-proof/Dust-proof		IP66 for front panel only
Display	PV Display	Indicates PV in RUN mode. Indicates setting characters in setting mode. 11-segment LCD display 5-digits, Backlight: Red/Green/Orange Character size: 24.0 x 11.0 mm (H x W)
	SV/MV/TIME Display	Indicates SV, MV or TIME in RUN mode. Retains display indication at power OFF. Indicates the set values in setting mode. 11-segment LCD display 5-digits, Backlight: Green Character size: 14.0 x 7.0 mm (H x W)
	PTN Display	Indicates the pattern number. If 'Holding' is selected in [Step SV Hold function when program ends], flashes when program control ends. 11-segment LCD display 2-digits, Backlight: Orange Character size: 10.0 x 5.0 mm (H x W)
	STEP Display	Indicates the step number. Flashes during Wait action. Indicates 𝘔 during Manual control. 11-segment LCD display 2-digits, Backlight: Orange Character size: 10.0 x 5.0 mm (H x W)

Indicator	PV indicator	Lit when PV is indicated in RUN mode.
		Backlight: Red/Green/Orange
	SV indicator	Lit when SV is indicated on the SV/MV/TIME Display.
		Retains indicator status at power OFF.
		Backlight: Green
	MV indicator	Lit when OUT1 MV is indicated on the SV/MV/TIME Display.
		Flashes when OUT2 MV is indicated on the SV/MV/TIME Display.
		Retains indicator status at power OFF.
		Backlight: Green
	TIME indicator	Lit when TIME is indicated on the SV/MV/TIME Display.
		Retains indicator status at power OFF.
		Backlight: Green
	PTN indicator	Lit when the pattern number is indicated.
		Backlight: Orange
	STEP indicator	Lit when the step number is indicated.
		Backlight: Orange
	PROFILE indicator	During program control, the indicator lights up depending on the program setting as follows.
		∥ : Lit when step SV is rising.
		▭ : Lit when step SV is constant.
		⟍ : Lit when step SV is falling.
		Unlit when Fixed value control is performing.
		Backlight: Green
	Time unit indicator	When the SV/MV/TIME Display indicates TIME, the following is shown depending on the selection in [Step time unit].
		M: Lit when 'Hours:Minutes' is selected in [Step time unit].
		S: Lit when 'Minutes:Seconds' is selected in [Step time unit].
		Backlight: Green

Indicator	Action indicator	Backlight: Orange	
		OUT1	Lit when control output OUT1 is ON.
			For direct current output type, flashes corresponding to the MV in 125 ms cycles.
		OUT2	Lit when control output OUT2 (DR, DS or DA option) is ON.
			For direct current output type (DA option), flashes corresponding to the MV in 125 ms cycles.
		EVT1	Lit when Event output EV1 is ON.
		EVT2	Lit when Event output EV2 is ON.
		EVT3	Lit when Event output EV3 is ON.
		EVT4	Lit when Event output EV4 is ON.
		MAN	Lit when Manual control is performing.
		T/R	Lit during Serial communication (C or C5 option) TX (transmitting) output.
		AT	Flashes during AT.
			Lit in AT standby when 'Multi mode' is selected in [AT mode].
		LOCK	Lit when 'Lock' is selected in [Set value lock].
		RUN	Lit during Program control RUN.
			Flashes during Fixed value control.
		HOLD	Flashes during Program control HOLD.

Setting Structure

Function key			
	RUN	RUN key	Performs program control. Cancels HOLD during Program control HOLD.
	PTN ▲	PATTERN key	Selects program pattern number.
		UP key	Increases the numeric value in setting mode.
	FAST ◄FAST►	FAST key	During program control, makes step time progress 60 times faster. In setting mode, makes the numeric value change faster.
	ADV ▼	ADVANCE key	During program control, interrupts performing step, and proceeds to the next step (Advance function).
		DOWN key	Decreases the numeric value in setting mode.
	SET RST	SET key	Moves to setting mode.
		RESET key	Moves to RUN mode.
	STOP MODE	STOP key	Stops the program control, or cancels the pattern end output.
		MODE key	Switches or selects setting mode.
	DISP B.MODE	DISPLAY key	Switches the indication on the SV/MV/TIME Display.
		BACK MODE key	Moves back to the previous mode.
	HOLD ENT	HOLD key	During program control, time progress pauses, and control continues using the SV at the given time (HOLD function).
		ENTER key	Registers the setting data, and moves to the next setting item.

Program Performance

Number of patterns	16 (Linkable)
Number of steps	256 (16 steps/pattern)
Number of repetitions	0 to 9999 times (Repetitions disabled when set to 0)
Program time range	0 to 99 hours 59 minutes/step, or 0 to 99 minutes 59 seconds/step (When ⁻:⁻:⁻:⁻ is set: Fixed value control is performed using step SV.)
Wait value	Thermocouple, RTD input without decimal point: $\pm$(0 to 100)℃ (℉) Thermocouple, RTD input with decimal point: $\pm$(0.0 to 100.0)℃ (℉) DC voltage, current input: $\pm$(0 to 1000)(The placement of the decimal point follows the selection.) (The Wait function is disabled when set to 0 or 0.0.)

Control Performance

| Control action		• PID control action (with AT function)
		• ON/OFF control action (When proportional band is set to 0 or 0.0.)
	OUT1 proportional band (P)	0 to Input span℃ (℉) DC voltage, current input: 0.0 to 1000.0% (ON/OFF control action when set to 0 or 0.0.)
	Integral time (I)	0 to 3600 seconds (Setting the value to 0 disables the function.)
	Derivative time (D)	0 to 1800 seconds (Setting the value to 0 disables the function.)
	OUT1 proportional cycle	1 to 120 seconds
	ARW	0 to 100%
	OUT1 ON/OFF hysteresis	0.1 to 1000.0℃ (℉) DC voltage, current input: 1 to 10000 (The placement of the decimal point follows the selection.)
	OUT1 high limit, low limit	0 to 100% (Direct current output: -5 to 105%)

Standard Function

Wait function	During program control, the program does not proceed to the next step until the deviation between PV and SV enters SV±Wait value at the end of step. The STEP Display flashes while the Wait function is working.
Hold function	During program control, progress of current step can be suspended. Pressing the RUN key cancels suspension, and program control resumes. During manual control, suspension cannot be cancelled.
Advance function	Interrupts current step during program control, and proceeds to the beginning of the next step.
Return-to-previous function	Stops current performing step, and returns to the previous program step. If the elapsed time of the current step is less than 1 minute, the program control returns to the beginning of the previous step. If the elapsed time of the current step is longer than 1 minute, the program control returns to the beginning of the current step. This function is disabled at Step 0 of started pattern, but returns to the beginning of Step 0.
Repetitions and pattern link function	Patterns 0 to 15 can be linked to the next pattern. Only pattern numbers in numerical order can be linked. For Pattern 15, Pattern 0 can be linked. Number of repetitions for Patterns 0 to 15: 0 to 9999 times. For repetitions of linked pattern, the whole linked pattern will be repeated as many times as set in "starting pattern number".
Step time speed-up function	During program control, makes step time progress 60 times faster while the FAST/◀FAST▶ key is pressed. If the Wait function is set, the Wait function has priority.
Program clearing	When program control is stopped (in Standby), and if the RUN key is pressed for 3 seconds at any items in Pattern setting group, program pattern data (for current step on the STEP Display and all the following steps) will return to the factory default value.
Power restore action	If power fails during program control, the controller can be operated depending on the selection in [Power restore action]. Stops after power is restored: Stops program control, and returns to Standby mode. Continues after power is restored: Continues (Resumes) previous program control after power is restored. Suspends after power is restored: Suspends (on hold) current program control, and performs control using the step SV at the point of suspension. Pressing the RUN key cancels suspension, and program control resumes. Progressing time error when power is restored: 1 minute
Pattern end function	If Pattern end output is selected in [Event output EV□ allocation], Pattern end output is turned ON after program control is finished, and the SV/MV/TIME Display flashes $P.End$. By pressing the STOP/MODE key for approximately 1 second, Pattern end output is turned OFF, and the unit returns to Program control Stop (in Standby). If Pattern end output time is set, Pattern end output is automatically turned OFF after Pattern end output time has expired. The unit returns to Program control Stop (in Standby).

Event output EV1		Output turns ON or OFF, depending on Event condition selected in [Event output EV1 allocation].
Event output EV2		Output turns ON or OFF, depending on Event condition selected in [Event output EV2 allocation]. Disabled if the D☐ option is ordered.
Event outputs EV3, EV4		Output turns ON or OFF, depending on Event condition selected in [Event output EV3 allocation] or [Event output EV4 allocation]. Event output EV3 and EV4 share one common terminal.
Alarm action		High limit alarm, High limit with standby alarm, Low limit alarm, Low limit with standby alarm, High/Low limits alarm, High/Low limits with standby alarm, High/Low limit range alarm, High/Low limit range with standby alarm, Process high alarm, Process high with standby alarm, Process low alarm, Process low with standby alarm. Alarm Energized/De-energized action are applied to the above alarms, totaling 24 alarm types. No alarm action can also be selected.
	Set value	Factory default value: 0
	Action	ON/OFF action
	Alarm hysteresis	0.1 to 1000.0℃ (℉) DC voltage, current input: 1 to 10000 (The placement of the decimal point follows the selection.)
	Output	EV☐ output for which Alarm output (001 to 012) is selected in [Event output EV☐ allocation].
Loop break alarm		When Loop break alarm is selected in [Event output EV☐ allocation], detects actuator trouble (heater burnout, heater adhesion) or sensor burnout.
	Loop break alarm time	0 to 200 minutes
	Loop break alarm span	Thermocouple, RTD input without decimal point: 0 to 150℃ (℉) Thermocouple, RTD input with decimal point: 0.0 to 150.0℃ (℉) DC voltage, current input: 0 to 1500 (The placement of the decimal point follows the selection.)
	Output	EV☐ output for which Loop break alarm output (014) is selected in [Event output EV☐ allocation].
Event input		Select a pattern from 1 – 15 depending on ON (Closed) or OFF (Open) status of any terminal (DI1 to DI4) and the COM terminal. If Serial communication (C or C5 option) is ordered, only Event input DI1 and DI2 can be used, and a pattern from 1 – 3 can be selected to perform. Pattern number selected by Event input has priority over Pattern number selected by the $\frac{PTN}{\blacktriangle}$ key. To select pattern numbers by keypad, make sure all Event inputs are in OFF (Open) status. Level action is used to determine ON or OFF. When power is turned ON, level action is engaged.
External operation input		By detecting signal edge action from OFF (Open) to ON (Closed), program control can be performed, stopped, held or advanced. During Manual control, External operation input will be disabled. Signal edge action is used to determine OFF or ON. When power is turned ON, level action is engaged.
Data clear function		When program control is stopped (in Standby), and if the $\frac{PTN}{\blacktriangle}$, $\frac{ADV}{\blacktriangledown}$ and $\frac{DISP}{B.MODE}$ keys are pressed for approx. 3 seconds, the PV Display indicates $cLR \ \Box$, and all setting values – except Input type, OUT1 proportional cycle, OUT2 proportional cycle – will return to the default value. It takes approximately 30 seconds for data clear.

Attached Function

Sensor correction	Shifts the PV when the temperature at the controlling location does not match with the temperature at the sensor location. (Effective within the input rating range regardless of the sensor correction value.) Correction range: Thermocouple, RTD input: -200.0 to 200.0℃ (℉) DC voltage, current input: -2000 to 2000 (The placement of the decimal point follows the selection.)
Set value lock	Locks all set values – except Set value lock – to prevent setting errors.

Auto/Manual control switch	Auto/Manual control can be selected in [Auto/Manual control switch] in Auto/Manual control switch group.
	If control action is switched from automatic to manual and vice versa, balanceless-bumpless function works to prevent a sudden change in MV.
	When switched to manual control, the MAN and MV indicators light up, the STEP Display indicates ⁴ʰ, and the SV/MV/TIME Display indicates the MV. To set the MV, use the $\frac{PTN}{▲}$ or $\frac{ADV}{▼}$ key.
	When switched to automatic control, the SV/MV/TIME Display shows SV.
	When power is turned ON, automatic control is performed.
	MV setting range:
	 When control action is switched to Manual during Program control Stop (in Standby):
	  [Output block 0 OUT1 low limit] to [Output block 0 OUT1 high limit]
	  If D☐ option is ordered:
	  – [Output block 0 OUT2 high limit] to [Output block 0 OUT1 high limit]
	 When control action is switched to Manual during program control:
	  [OUT1 low limit of running step output block number] to
	  [OUT1 high limit of running step output block number]
	  If D☐ option is ordered: – [OUT2 high limit of running step output block number] to [OUT1 high limit of running step output block number]

Power failure countermeasure	The setting data is backed up in the non-volatile IC memory.
Self-diagnosis	The CPU is monitored by a watchdog timer, and if an abnormal status occurs, the controller is switched to warm-up status, turning all outputs OFF.
Automatic cold junction temperature compensation	This detects the temperature at the connecting terminal between the thermocouple and the instrument, and always maintains it at the same status as if the reference junction location temperature were at 0℃ (32℉).
Burnout (Overscale)	If thermocouple or RTD input is burnt out, the PV display flashes ⌐⌐⌐⌐, and OUT1, OUT2 are turned OFF (OUT1 low limit value for direct current output). For Manual control, the preset MV is output.

Input error	Contents, Indication	Output Status			
		OUT1		OUT2	
		Direct (Cooling) action	Reverse (Heating) action	Direct (Cooling) action	Reverse (Heating) action
	Overscale If PV exceeded indication range high limit: ⌐⌐⌐⌐ flashes.	OFF (4 mA) or OUT1 low limit value	OFF (4 mA) or OUT1 low limit value	OFF or OUT2 low limit value	OFF or OUT2 low limit value
	Underscale If PV has dropped below indication range low limit: ⌐⌐⌐⌐ flashes.	OFF (4 mA) or OUT1 low limit value	OFF (4 mA) or OUT1 low limit value	OFF or OUT2 low limit value	OFF or OUT2 low limit value

	For Manual control, the preset MV is output.
	DC input disconnection: If DC voltage or current input is disconnected, the following is indicated depending on the input.
	 4 to 20 mA DC, 1 to 5 V DC input: The PV Display flashes ⌐⌐⌐⌐
	 0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC input:
	  The PV Display flashes ⌐⌐⌐⌐.
	 0 to 20 mA, 0 to 5 V DC, 0 to 10 V DC input:
	  The PV Display indicates the value corresponding with 0 mA DC or 0 V DC input.					

Indication range, Control range	Thermocouple input: [Input range low limit value – 50℃ (100℉)] to [Input range high limit value + 50℃ (100℉)] RTD input: [Input range low limit value – Input span x 1%] to [Input range high limit value + 50℃ (100℉)] DC voltage, current input: [Scaling low limit value – Scaling span x 1%] to [Scaling high limit value + Scaling span x 10%]
Warm-up indication	After the power supply to the instrument is turned on, the PV Display indicates the input type, and the SV Display indicates input range high limit value (for thermocouple, RTD input) or scaling high limit value (for direct current and voltage input) for approximately 3 seconds.
Console communication	By connecting the USB communication cable (CMB-001, sold separately) to the console connector (*), the following operations can be conducted from an external computer, using the Console software SWC-PCA01M. Console communication and Serial communication (C or C5 option) cannot be used together. (1) Reading and setting of SV, PID and various set values (2) Reading of PV and action status (3) Function change Communication interface: C-MOS level (*) Connect the USB communication cable (CMB-001) after power is turned OFF. *Never* turn the power ON or OFF after connection.
PV color range	The PV Display color can be selected from 7 types as follows.

Setting	Function	PV color
GRN	Green	Constantly Green
REd	Red	Constantly Red
oRG	Orange	Constantly Orange
ALGR	When any alarm (EV1 to EV4) is ON: Green → Red	When alarm is OFF: Green When any alarm (EV1 to EV4) is ON: The PV color turns from green to red continuously according to the alarm.
ALoR	When any alarm (EV1 to EV4) is ON: Orange → Red	When alarm is OFF: Orange When any alarm (EV1 to EV4) is ON: The PV color turns from orange to red continuously according to the alarm.
PVGR	PV color changes continuously.	PV color changes continuously according to the PV color range. PV is lower than [SV – PV color range]: Orange PV is within [SV±PV color range]: Green PV is higher than [SV+PV color range]: Red

PV color range   PV color range

| Orange | Green | Green | Red |

SV

(Fig. 10.1-2)

Setting	Function	PV color
APGR☐	PV color changes continuously + Any alarm (EV1 to EV4) is ON: Red	PV color changes continuously according to the PV color range. In addition, when any alarm (EV1 to EV4) is ON: PV color turns red. PV color changes continuously according to the PV color range. PV is lower than [SV – PV color range]: Orange PV is within [SV±PV color range]: Green PV is higher than [SV+PV color range]: Red Any alarm (EV1 to EV4) is ON: Red PV color range PV color range Orange Green Green Red Red Red EV2 value SV EV1 value (Low limit alarm) (High limit alarm) (Fig. 10.1-3)

10.2 Optional Specifications

Serial communication (C or C5 option)	The following operations can be carried out from an external computer. (1) Reading and setting of the step SV, step time, PID and various set values (2) Reading of the PV and action status (3) Function change			
Communication line	EIA RS-232C (C option) EIA RS-485 (C5 option)			
Communication method	Half-duplex communication			
Communication speed	9600, 19200, 38400 bps (Selectable by keypad)			
Synchronization method	Start-stop synchronization			
Communication protocol	Shinko protocol/Modbus ASCII/Modbus RTU (Selectable by keypad) Communication converter IF-400 is available for Shinko protocol and Modbus protocol.			
Data bit/Parity	Data bit: 7 or 8 Parity: Even, Odd, No parity (Selectable by keypad)			
Stop bit	1 or 2 (Selectable by keypad)			
Data format	**Communication protocol**	**Shinko protocol**	**Modbus ASCII**	**Modbus RTU**
	Start bit	1	1	1
	Data bit	7	7 or 8 Selectable	8
	Parity	Even	Even (No parity, Odd) Selectable	No parity (Even, Odd) Selectable
	Stop bit	1	1 or 2 Selectable	1 or 2 Selectable
SV digital transmission	If 'SV digital transmission' is selected in [Communication protocol] in Serial communication, SV can be digitally transmitted to Shinko indicating controllers (with Serial communication C5 option). Update cycle: 250 ms			

(Fig. 10.2-1)

Time signal output
(TS option)
		Time signal output OFF time and Time signal output ON time are set within each step time, and outputs them during Program control RUN.
		To use the Time signal output function, set the Time signal block number (for which Time signal output OFF time and Time signal output ON time have been set) for each step.
		Select any one number from a maximum of 16 Time signal blocks.
		The same number can be selected as many times as desired.
		A maximum of 8 points of Time signal output can be used for one step.
		Time signal output can be used as a status output.
		   Time signal output TS1 → Status (RUN) output
		   Time signal output TS2 → Status (HOLD) output
		   Time signal output TS3 → Status (WAIT) output
		   Time signal output TS4 → Status (FAST) output
		   Time signal output TS5 → Status (STOP) output

Transmission output (TA, TV option)		Converting the value (PV, SV or MV transmission) to analog signal every 125 ms, outputs the value in current or voltage. If Transmission output high limit and low limit value are the same, Transmission output low limit value will be output. If SV or MV transmission is selected, 4 mA or 0 V will be output when program control stops (in Standby).
Heating/Cooling control output (DR, DS or DA option)		Performs Heating/Cooling control. If the D□ option is ordered, Event output EV2 will be disabled.
	OUT2 proportional band	0.0 to 10.0 times (Multiplied value of OUT1 proportional band) (ON/OFF control when set to 0.0)
	Integral time(I)	0 to 3600 sec (Setting to 0 disables the function.) (Same value as that of OUT1)
	Derivative time (D)	0 to 1800 sec (Setting to 0 disables the function.) (Same value as that of OUT1)
	OUT2 proportional cycle	1 to 120 seconds
	Overlap/Dead band	Thermocouple, RTD input: -200.0 to 200.0℃ (℉) DC voltage, current input: -2000 to 2000 (The placement of the decimal point follows the selection.)
	OUT2 ON/OFF hysteresis	Thermocouple, RTD input: 0.1 to 1000.0℃ (℉) DC voltage, current input: 1 to 10000 (The placement of the decimal point follows the selection.)
	OUT2 high limit, OUT2 low limit	0 to 100% (DA: -5 to 105%)
	OUT2 cooling method	(1) Air cooling: Linear characteristics (2) Oil cooling: 1.5th power of the linear characteristics (3) Water cooling: 2nd power of the linear characteristics

11. Troubleshooting

<table>
<tr><td colspan="2">⚠ **Warning**</td></tr>
<tr><td colspan="2">**Turn the power supply to the instrument off before wiring or checking.**
Working on or touching the terminal with the power switched on may result in severe injury
or death due to electrical shock.
The instrument *must* be grounded before turning the power ON.</td></tr>
</table>

If any malfunctions occur, refer to the following items after checking that power is being supplied to the controller.

11.1 Indication

Problem	Possible Cause	Solution
The PV Display indicates ERR ☐	Internal non-volatile IC memory is defective.	If the problem is not still solved after the power is turned OFF and ON again, contact our agency or us.
The PV Display flashes ☐☐☐☐	PV has exceeded the Indication range and Control range.	Check the input signal source.
	Burnout of thermocouple, RTD or disconnection of DC voltage (0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC)	Replace each sensor. **How to check whether the sensor is burnt out** **[Thermocouple]** If the input terminals of the instrument are shorted, and if a value around room temperature is indicated, the instrument is likely to be operating normally, however, the sensor may be burnt out. **[RTD]** If approx. 100 Ω of resistance is connected to the input terminals between A-B of the instrument and between B-B is shorted, and if a value around 0℃ (32℉) is indicated, the instrument is likely to be operating normally, however, the sensor may be burnt out. **[DC voltage (0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC)]** If the input terminals of the instrument are shorted, and a value corresponding to 0 mV or 0 V is indicated, the instrument is likely to be operating normally, however, the signal wire may be disconnected.
	Check whether the input terminals of thermocouple, RTD or DC voltage (0 to 10 mV DC, -10 to 10 mV DC, 0 to 50 mV DC, 0 to 100 mV DC, 0 to 1 V DC) are securely mounted to the instrument input terminals.	Connect the sensor terminals to the instrument input terminals securely.

Problem	Possible Cause	Solution
The PV Display flashes ⌐¯¯¯¯⌐	PV has dropped below the Indication range and Control range.	Check the input signal source and wiring of input terminals.
	Check whether input signal wire for DC voltage (1 to 5 V DC) or direct current (4 to 20 mA DC) is disconnected.	**How to check whether the input signal wire is disconnected** **[DC voltage (1 to 5 V DC)]** If the input to the input terminals of the instrument is 1 V DC and if a scaling low limit value is indicated, the instrument is likely to be operating normally, however, the signal wire may be disconnected. **[Direct current (4 to 20 mA DC)]** If the input to the input terminals of the instrument is 4 mA DC and if a scaling low limit value is indicated, the instrument is likely to be operating normally, however, the signal wire may be disconnected.
	Check whether input signal wire for DC voltage (1 to 5 V DC) or current (4 to 20 mA DC) is securely connected to the instrument input terminals.	Connect the input signal wire to the terminals of this instrument securely.
	Check if polarity of thermocouple or compensating lead wire is correct. Check whether codes (A, B, B) of RTD agree with the instrument terminals.	Wire them correctly.
The PV Display keeps indicating the value set in [Scaling low limit].	Check whether the input signal wire for DC voltage (0 to 5 V DC, 0 to 10 V DC) and direct current (0 to 20 mA DC) is disconnected.	Check the input signal wires of DC voltage (0 to 5 V DC, 0 to 10 V DC) and direct current (0 to 20 mA DC). **How to check whether the input signal wire is disconnected** **[DC voltage (0 to 5 V DC, 0 to 10 V DC)]** If the input to the input terminal of this controller is 1 V DC, and if a value (converted value from scaling high, low limit setting) corresponding to 1 V DC is indicated, the controller is likely to be operating normally, however, the input signal wire may be disconnected. **[Direct current (0 to 20 mA DC)]** If the input to the input terminal of this controller is 4 mA DC, and if a value (converted value from scaling high, low limit setting) corresponding to 4 mA DC is indicated, the controller is likely to be operating normally, however, the input signal wire may be disconnected.
	Check whether the input terminals for DC voltage (0 to 5 V DC, 0 to 10 V DC) or direct current (0 to 20 mA DC) are securely connected to the instrument input terminals.	Connect the input terminals of DC voltage and current to the input terminals of this instrument securely.

Problem	Possible Cause	Solution
The indication of PV Display is irregular or unstable.	Check whether sensor input or temperature unit (℃ or ℉) is correct.	Select the input type and temperature unit (℃ or ℉) correctly.
	Sensor correction value is unsuitable.	Set it to a suitable value.
	Check whether the sensor specifications are correct.	Use a sensor with appropriate specifications.
	AC leaks into the sensor circuit.	Use an ungrounded type sensor.
	There may be equipment that interferes with or makes noise near the instrument.	Keep the instrument clear of any potentially disruptive equipment.

11.2 Key Operation

Problem	Possible Cause	Solution
None of the set values (Step SV, step time, OUT1 proportional band, EV□ alarm value, etc.) can be set.	'Lock' is selected in [Set value lock].	Select 'Unlock' in [Set value lock].
	AT is performing.	Cancel the AT.
The setting indication does not change in the input range, and new values are unable to be set.	SV high or low limit value may be set at the point where the value does not change.	Set them to a suitable value.
A pattern number cannot be selected by the $\frac{PTN}{\blacktriangle}$ key.	A pattern number might be selected by means of Event input. The pattern number selected via Event input has priority over a pattern number selected by the $\frac{PTN}{\blacktriangle}$ key.	Open the COM terminal and any one terminal of Event input (DI1 to DI4).

11.3 Control

Problem	Possible Cause	Solution
Even though program control is executed, the control is advanced and the program is finished soon.	The step time of the performing pattern number is set to 0.00.	Set the step time to a suitable value.
Step does not progress.	Program control is suspended (Hold function). While program control is suspended, the HOLD indicator flashes.	Press the RUN key. Suspension of control will be cancelled, and program control will resume.
	The Wait function is working. If the Wait function is working, the STEP Display flashes.	Cancel the Wait function by pressing the $\frac{ADV}{\blacktriangledown}$ or $\frac{STOP}{MODE}$ key. The Wait function will be cancelled, and program control will continue.
PV does not rise or fall.	Sensor is out of order.	Replace the sensor.
	Check whether the sensor or control output terminals are securely mounted to the instrument input terminals.	Ensure that the sensor or control output terminals are mounted to the instrument input terminals securely.
	Check whether the wiring of sensor or control output terminals is correct.	Wire them correctly.
The control output OUT1 or OUT2 remains in an ON status.	OUT1 or OUT2 low limit value is set to 100% or higher.	Set it to a suitable value.
The control output OUT1 or OUT2 remains in an OFF status.	OUT1 or OUT2 high limit value is set to 0% or less.	Set it to a suitable value.
The step SV Hold function does not work.	'Not holding' is selected in [Step SV Hold function when program ends].	Select 'Holding' in [Step SV Hold function when program ends].
The step SV Hold function does not work even if 'Holding' is selected in [Step SV Hold function when program ends].	There are steps which have not been set within the program pattern.	Set the last step values (of the program pattern in the Pattern setting group – except step time), to all steps which have not been set yet. Set the step time to 0:00.

12. Character Table

12.1 Group Selection

Upper left: PTN Display, PV Display

      The PTN Display is unlit, and the PV Display indicates group name characters.

Lower left: STEP Display, SV/MV/TIME Display

      The STEP Display and the SV/MV/TIME Display are unlit.

Right side: Indicates the group name.
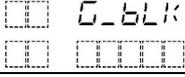

Character, Factory Default	Group Name
G_PTN	Pattern setting group
G_bLK	Block setting group
G_cHN	Repetitions and pattern link setting group
G_AT	AT Perform group
G_ENG	Engineering setting group
G_MAN	Auto/Manual control switch group

12.2 Pattern Setting Group

Upper left: PTN Display, PV Display

> The PTN Display indicates the pattern number to be set, and
>
> the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

> The STEP Display indicates the step number to be set, and
>
> the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range (or selection item).

Character, Factory Default	Setting Item, Setting Range	Data
PTN 0	**Setting pattern number** 0 to 15	
TEMP 0	**Step 0 step SV** SV low limit to SV high limit	

TIME 00.00	**Step 0 step time**
	  -:-:-:-, 0:00 to 99:59 Time unit follows the selection in [Step time unit].
	  If the ADV▼ key is pressed at 0:00, -:-:-:- is set.
	  When -:-:-:- is set, Fixed value control is performed using step
	  SV of Step 0.	

_PId 0	**Step 0 PID block number** 0 to 9	

_TS1 0	**Step 0 Time signal 1 block number**
	  0 to 15
	  Available when Time signal output (TS option) is ordered, and when Time signal output TS1 is selected in [Time signal output TS1/Status (RUN) output].	

_TS2 0	**Step 0 Time signal 2 block number**
	  0 to 15
	  Available when Time signal output (TS option) is ordered, and when Time signal output TS2 is selected in [Time signal output TS2/Status (HOLD) output].	

_TS3 0	**Step 0 Time signal 3 block number**
	  0 to 15
	  Available when Time signal output (TS option) is ordered, and when Time signal output TS3 is selected in [Time signal output TS3/Status (WAIT) output].	

_TS4 0	**Step 0 Time signal 4 block number**
	  0 to 15
	  Available when Time signal output (TS option) is ordered, and when Time signal output TS4 is selected in [Time signal output TS4/Status (FAST) output].	

_TS5 0	**Step 0 Time signal 5 block number**
	  0 to 15
	  Available when Time signal output (TS option) is ordered, and when Time signal output TS5 is selected in [Time signal output TS5/Status (STOP) output].	

_TS6 0	**Step 0 Time signal 6 block number**
	  0 to 15
	  Available when Time signal output (TS option) is ordered.	

_TS7 0	**Step 0 Time signal 7 block number**
	  0 to 15
	  Available when Time signal output (TS option) is ordered.	

_TS8 0	**Step 0 Time signal 8 block number**
	  0 to 15
	  Available when Time signal output (TS option) is ordered.	

_WAT 0	**Step 0 Wait block number** 0 to 9

12.3 Block Setting Group

Upper left: PTN Display, PV Display

   The PTN Display is unlit, and the PV Display indicates group name characters.

Lower left: STEP Display, SV/MV/TIME Display

   The STEP Display and the SV/MV/TIME Display are unlit.

Right side: Indicates the group name.

Character, Factory Default	Group Name
b_PI d	PID block setting group
b_ΓЧ	Time signal block setting group (When the TS option is ordered)
b_WAΓ	Wait block setting group
b_ALM	Alarm block setting group
b_oUΓ	Output block setting group

12.4 PID Block Setting Group

Upper left: PTN Display, PV Display

        The PTN Display is unlit, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

        The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range.

| Character, Factory Default	Setting Item, Setting Range	Data
P0_P 10	**Block 0 OUT1 proportional band** Thermocouple, RTD input without decimal point: 0 to input span℃ (℉) Thermocouple, RTD input with decimal point: 0.0 to input span℃ (℉) DC voltage, current input: 0.0 to 1000.0%	
P0_I 200	**Block 0 integral time** 0 to 3600 seconds	
P0_d 50	**Block 0 derivative time** 0 to 1800 seconds	
P0_∏ 50	**Block 0 ARW** 0 to 100%	
P0Pb 10	**Block 0 OUT2 proportional band** 0.0 to 10.0 times (Multiplied value of Block 0 OUT1 proportional band) Available when Heating/Cooling control (DR, DS or DA option) is ordered.	
P1_P 10	**Block 1 OUT1 proportional band** Thermocouple, RTD input without decimal point: 0 to input span℃ (℉) Thermocouple, RTD input with decimal point: 0.0 to input span℃ (℉) DC voltage, current input: 0.0 to 1000.0%	
	Repeat the above settings up to 'Block 9 OUT2 proportional band', in the same way if necessary.	
P9Pb 10	**Block 9 OUT2 proportional band** 0.0 to 10.0 times (Multiplied value of Block 9 OUT1 proportional band) Available when Heating/Cooling control (DR, DS or DA option) is ordered.	

12.5 Time Signal Block Setting Group
Upper left: PTN Display, PV Display

        The PTN Display is unlit, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

        The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range.

Character, Factory Default	Setting Item, Setting Range	Data
00_F 0000	**Block 0 Time signal output OFF time** 00:00 to 99:59 Time unit follows the selection in [Step time unit].	
00_N 0000	**Block 0 Time signal output ON time** 00:00 to 99:59 Time unit follows the selection in [Step time unit].	
01_F 0000	**Block 1 Time signal output OFF time** 00:00 to 99:59 Time unit follows the selection in [Step time unit].	
	Repeat the above settings up to 'Block 15 Time signal output ON time', in the same way if necessary.	
15_N 0000	**Block 15 Time signal output ON time** 00:00 to 99:59 Time unit follows the selection in [Step time unit].	

12.6 Wait Block Setting Group

Upper left: PTN Display, PV Display

        The PTN Display is unlit, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

        The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range.

Character, Factory Default	Setting Item, Setting Range	Data
`W0_` `0`	**Block 0 Wait value** Thermocouple, RTD input without decimal point: 0 to 100℃ (℉) Thermocouple, RTD input with decimal point: 0.0 to 100.0℃ (℉) DC voltage, current input: 0 to 1000 (The placement of the decimal point follows the selection.)	
`W1_` `0`	**Block 1 Wait value** Thermocouple, RTD input without decimal point: 0 to 100℃ (℉) Thermocouple, RTD input with decimal point: 0.0 to 100.0℃ (℉) DC voltage, current input: 0 to 1000 (The placement of the decimal point follows the selection.)	
	Repeat the above settings up to 'Block 9 Wait value', in the same way if necessary.	
`W9_` `0`	**Block 9 Wait value** Thermocouple, RTD input without decimal point: 0 to 100℃ (℉) Thermocouple, RTD input with decimal point: 0.0 to 100.0℃ (℉) DC voltage, current input: 0 to 1000 (The placement of the decimal point follows the selection.)	

12.7 Alarlm Block Setting Group

Upper left: PTN Display, PV Display

> The PTN Display is unlit, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

> The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range.

Character, Factory Default	Setting Item, Setting Range		Data
▢ *A0_1* ▢▢ ▢▢▢▢*0*	**Block 0 EV1 alarm value**		
	Type	**Setting Range**	
	No alarm action		
	High limit alarm	– (Input span) to Input span (*1) (Alarm action will be disabled when set to 0 or 0.0.)	
	High limit with standby alarm	– (Input span) to Input span (*1) (Alarm action will be disabled when set to 0 or 0.0.)	
	Low limit alarm	– (Input span) to Input span (*1) (Alarm action will be disabled when set to 0 or 0.0.)	
	Low limit with standby alarm	– (Input span) to Input span (*1) (Alarm action will be disabled when set to 0 or 0.0.)	
	High/Low limits alarm	0 to Input span (*1) (Alarm action will be disabled when set to 0 or 0.0.)	
	High/Low limits with standby alarm	0 to Input span (*1) (Alarm action will be disabled when set to 0 or 0.0.)	
	High/Low limit range alarm	0 to Input span (*1) (Alarm action will be disabled when set to 0 or 0.0.)	
	High/Low limit range with standby alarm	0 to Input span (*1) (Alarm action will be disabled when set to 0 or 0.0.)	
	Process high alarm	Input range low limit to Input range high limit (*2)	
	Process high with standby alarm	Input range low limit to Input range high limit (*2)	
	Process low alarm	Input range low limit to Input range high limit (*2)	
	Process low with standby alarm	Input range low limit to Input range high limit (*2)	
	(*1) For DC voltage, current input, the input span is the same as the scaling span. (*2) For DC voltage, current input, input range low (or high) limit value is the same as scaling low (or high) limit value.		
	Available when 001 to 012 (Alarm output) is selected in [Event output EV1 allocation].		
▢ *A0_2* ▢ ▢▢ ▢▢▢▢*0*	**Block 0 EV2 alarm value** Same as that of Block 0 EV1 alarm value. Available when 001 to 012 (Alarm output) is selected in [Event output EV2 allocation].		
▢ *A0_3* ▢ ▢▢ ▢▢▢▢*0*	**Block 0 EV3 alarm value** Same as that of Block 0 EV1 alarm value. Available when 001 to 012 (Alarm output) is selected in [Event output EV3 allocation].		
▢ *A0_4* ▢ ▢▢ ▢▢▢▢*0*	**Block 0 EV4 alarm value** Same as that of Block 0 EV1 alarm value. Available when 001 to 012 (Alarm output) is selected in [Event output EV4 allocation].		

Character, Factory Default	Setting Item, Setting Range	Data
`A1_1` `0`	**Block 1 EV1 alarm value** Same as that of Block 0 EV1 alarm value. Available when 001 to 012 (Alarm output) is selected in [Event output EV1 allocation].	
	Repeat the above settings up to 'Block 9 EV4 alarm value', in the same way if necessary.	
`A9_4` `0`	**Block 9 EV4 alarm value** Same as that of Block 0 EV1 alarm value. Available when 001 to 012 (Alarm output) is selected in [Event output EV4 allocation].	

12.8 Output Block Setting Group

Upper left: PTN Display, PV Display
> The PTN Display is unlit, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display
> The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range.

| Character, Factory Default	Setting Item, Setting Range	Data
o0_H 100	**Block 0 OUT1 high limit** 　OUT1 low limit to 100% (For direct current output: OUT1 low limit to 105%)	
o0_L 0	**Block 0 OUT1 low limit** 　0% to OUT1 high limit (For direct current output: -5% to OUT1 high limit)	
o0Hb 100	**Block 0 OUT2 high limit** 　OUT2 low limit to 100% (For direct current output: OUT2 low limit to 105%) 　Available when Heating/Cooling control (DR, DS or DA option) is ordered.	
o0Lb 0	**Block 0 OUT2 low limit** 　0% to OUT2 high limit. (For direct current output: -5% to OUT2 high limit) 　Available when Heating/Cooling control (DR, DS or DA option) is ordered.	
o0cL 0	**Block 0 OUT1 rate-of-change** 　0 to 100 %/second	
o1_H 100	**Block 1 OUT1 high limit** 　OUT1 low limit to 100% (For direct current output: OUT1 low limit to 105%)	
	Repeat the above settings up to 'Block 9 OUT1 rate-of-change', in the same way if necessary.	
o9cL 0	**Block 9 OUT1 rate-of-change** 　0 to 100 %/second	
12.9 Repetitions and Pattern Link Setting Group

Upper left: PTN Display, PV Display

            The PTN Display indicates the setting pattern number, and

            the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

            The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range.

| Character, Factory Default	Setting Item, Setting Range	Data
0 REPT ____0	**Repetitions for Pattern 0** 0 to 9999 times	
0 cHLN _-_-_-_-	**Pattern link between pattern 0 and pattern 1** -_-_-_-_- : Pattern link Disabled cHLN : Pattern link Enabled	
1 REPT ____0	**Repetitions for Pattern 1** 0 to 9999 times	
	Repeat the above settings up to 'Pattern link between pattern 15 and pattern 0', in the same way if necessary.	
15 cHLN -_-_-_-_-	**Pattern link between pattern 15 and pattern 0** -_-_-_-_- : Pattern link Disabled cHLN : Pattern link Enabled	

12.10 AT Perform Group

Upper left: PTN Display, PV Display
       The PTN Display is unlit, and the PV Display indicates setting item characters.
Lower left: STEP Display, SV/MV/TIME Display
       The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.
Right side: Indicates the setting item and setting range.

Character, Factory Default	Setting Item, Setting Range	Data

⬚ AⲅɥL⬚
 ⬚ NoML⬚
	AT mode
	   NoML⬚ : Normal mode
	      When AT Perform is selected in [AT Perform/Cancel], AT
	      starts immediately.
	   MULⲅ⬚ : Multi mode
	      AT is automatically performed at the point where 90% of
	      progressed step time has elapsed.
	      If there are the same PID block numbers in one pattern,
	      the AT is performed only for the first step.

12.13 Output Parameter Setting Group

Upper left: PTN Display, PV Display

    The PTN Display is unlit, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

    The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range.

Character, Factory Default	Setting Item, Setting Range	Data

`c` `30`
 • Relay contact output: 30 sec
 • Non-contact voltage output: 3 sec
	OUT1 proportional cycle
	   1 to 120 sec
	   Available when control output OUT1 is Relay contact output or Non-contact voltage output.	

`HY4` `10`	**OUT1 ON/OFF hysteresis**
	   Thermocouple, RTD input: 0.1 to 1000.0℃（℉)
	   DC voltage, current input: 1 to 10000 (The placement of the decimal point
	            follows the selection.)	

`c_b` `30`
 • DR: 30 sec
 • DS: 3 sec
	OUT2 proportional cycle
	   1 to 120 sec
	   Available when Heating/Cooling control (DR or DS option) is ordered.	

`cAcr` `AI R`	**OUT2 cooling method**
	   `AI R` : Air cooling (Linear characteristics)
	   `oI L` : Oil cooling (1.5th power of the linear characteristics)
	   `WAr` : Water cooling (2nd power of the linear characteristics)
	   Available when Heating/Cooling control (DR, DS or DA option) is ordered.	

`HY4b` `10`	**OUT2 ON/OFF hysteresis**
	   Thermocouple, RTD input: 0.1 to 1000.0℃（℉)
	   DC voltage, current input: 1 to 10000 (The placement of the decimal point
	            follows the selection.)
	   Available when Heating/Cooling control (DR, DS or DA option) is ordered.	

`db` `0.0`	**Overlap/Dead band**
	   Thermocouple, RTD input: -200.0 to 200.0℃（℉)
	   DC voltage, current input: -2000 to 2000 (The placement of the decimal
	            point follows the selection.)
	   Available when Heating/Cooling control (DR, DS or DA option) is ordered.	

`coNr` `HEAr`	**Direct/Reverse action**
	   `HEAr` : Reverse action
	   `cooL` : Direct action	

12.14 Event Output Parameter Setting Group

Upper left: PTN Display, PV Display

        The PTN Display is unlit, and the PV Display indicates setting item characters.

Lower left: STEP Display, SV/MV/TIME Display

        The STEP Display is unlit, and the SV/MV/TIME Display indicates factory default value.

Right side: Indicates the setting item and setting range.

13. Making Program Pattern Table and Data Table

Before setting program, make a program pattern table and data table.

13.1 Making Program Pattern Table

Please make a copy of the program pattern table (p.177), and follow the procedure below.

(1) Write a block number (Step SV, Step time, PID, Time signal 1 to 8, Wait, Alarm, Output) for each step from Step 0 in numerical order.
(Even if the same block number is used, write for every step.)
(2) Draw a line graph of step SV.

Explanation of Program Pattern Table

Program pattern table consists of Y axis which represents the step SV (°C, °F), and X axis which represents the step time (Hours:Minutes, Minutes:Seconds).
Step SV is considered to be the SV at the end of the step.
Step time is considered to be the step process time.

- The relation between the step SV and Step time can be explained as follows.
   Step 0: The control is performed so that the temperature reaches from 0 to 500°C for 30 minutes.
   Depending on the selection in [Program control start type], control is performed as follows.
   - When SV start is selected: Performs control from the step SV set in [Step SV when program control starts] so that the temperature reaches 500°C.
   - When PV start or PVR start is selected: Step SV and time are advanced to PV, and control starts so that the temperature reaches 500°C.
   Step 1: The control is performed so that SV is maintained at 500°C for 1 hour.
   Step 2: The control is performed so that SV rises from 500°C to 1000°C for 40 minutes.
   Step 3: The control is performed so that SV is maintained at 1000°C for 1 hour.
   Step 4: The control is performed so that SV drops from 1000°C to 0°C for 2 hours.

- PID block includes: OUT1 proportional band, Integral time, Derivative time, ARW, OUT2 proportional band
   10 types of PID block (0 – 9) can be set.

- Time signal 1 to 8 (TS1 – TS8) includes: Time signal output OFF time and Time signal output ON time.
   16 types of Time signal block (0 – 15) can be set for Time signal 1 to 8 (TS1 – TS8) respectively.
   For Time signal 1 to 5 (TS1 – TS5), the Time signal output can be used only when Time signal output is selected in [Time signal output/Status output].

- Wait block includes Wait values.
   10 types of Wait block (0 – 9) can be set.

- Alarm block includes: EV1 alarm value, EV2 alarm value, EV3 alarm value, EV4 alarm value
   10 types of Alarm block (0 – 9) can be set.

- Output block includes: OUT1 high limit, OUT1 low limit, OUT2 high limit, OUT2 low limit, OUT1 rate-of-change.
   10 types of Output block (0 – 9) can be set.

Program Pattern Table Example

Pattern 1					
Step number	0	1	2	3	4

	Step 0	Step 1	Step 2	Step 3	Step 4
Step SV	500	500	1000	1000	0
Step time	0:30	1:00	0:40	1:00	2:00
PID block number	1	1	2	2	1
Time signal 1 block number	0	1	0	1	0
Time signal 2 block number	2	2	2	2	2
Time signal 3 block number	1	2	1	2	0
Time signal 4 block number	1	1	1	1	0
Time signal 5 block number	0	0	0	0	1
Time signal 6 block number	1	0	1	0	1
Time signal 7 block number	2	0	2	0	2
Time signal 8 block number	0	0	0	0	2
Wait block number	1	0	1	0	0
Alarm block number	1	2	1	2	1
Output block number	0	1	0	1	0

(Fig. 13.1-1)

13.2 Making Data Table

Please make a copy of Data Table (p.178), and follow the procedure below.

(1) Write data for blocks in each group, by referring to the Block numbers in the Program pattern table.

(2) For other setting items, write the data in the table if required.

About settings in each block setting group

If program pattern is not set for a step, its block number becomes 0 (zero). We highly recommend that you leave the factory default values of Block 0 in each block setting group as they are, and set the values from Block 1.

Data Table Example

• **PID block setting group** (*1)

Block number	OUT1 P-band	Integral time	Derivative time	ARW	OUT2 P-band
0	10°C	200 seconds	50 seconds	50%	1.0 times
1	10°C	200 seconds	50 seconds	50%	1.0 times
2	10°C	200 seconds	50 seconds	50%	1.0 times

• **Time signal block setting group (TS option)**

Block number	Time signal output OFF time (Hours:Minutes)	Time signal output ON time (Hours:Minutes)
0	0:00	0:00
1	0:20	0:30
2	0:00	0:30

• **Wait block setting group**

Block number	Wait value
0	0°C (*2)
1	10°C
2	5°C

• **Alarm block setting group** (*3)

Block number	EV1 alarm value (Pattern end output)	EV2 alarm value (Process high alarm)	EV3 alarm value (High limit alarm)	EV4 alarm value (Low limit alarm)
0		0°C (*4)	0°C (*4)	0°C (*4)
1		600°C	5°C	5°C
2		1100°C	10°C	10°C

• **Output block setting group**

Block number	OUT1 high limit	OUT1 low limit	OUT2 high limit	OUT2 low limit	OUT1 rate-of change
0	100% (*5)	0% (*5)	100%	0%	0 %/sec
1	80%	0%	80%	0%	10 %/sec
2	100%	10%	100%	10%	0 %/sec

(*1) As PID constant are obtained by performing AT, values in the PID block setting group are factory default value.

(*2) As 'Block 0 Wait value' is used as Wait Disabled, the Wait value is factory default value.

(*3) As EV1 is used as Pattern end output, 'EV1 alarm value' setting item does not appear.

(*4) As Block 0 EV2, EV3, EV4 alarm values are used as No alarm action, their values are factory default value.

(*5) As Block 0 OUT1 high limit and low limit are used as MV setting range for manual control, their values are factory default value.

• Other setting data

Setting Item	Data
OUT1 proportional cycle	15 seconds
OUT2 proportional cycle	15 seconds
Number of repetitions	1

PCA1　Key Operation Flowchart

Power ON

RUN mode

Program control Stop (in standby) / Program control RUN

STOP MODE (1 sec)

(*): Select the pattern number to be performed by the PTN key, and press the RUN key.

Group selection mode

G_PTN Pattern setting group
G_bLK Block setting group
G_cHN Repetitions and pattern link setting group
G_AT AT Perform group
G_ENG Engineering setting group
G_MAN Auto/Manual control switch group

●Selection Items

Pattern link							
– – – –	Pattern link Disabled						
cHI N	Pattern link Enabled						

Input type	
K	K -200 to 1370 °C
K	K -200.0 to 400.0 °C
J	J -200 to 1000 °C
R	R 0 to 1760 °C
S	S 0 to 1760 °C
b	b 0 to 1820 °C
E	E -200 to 800 °C
T	T -200.0 to 400.0 °C
N	N -200 to 1300 °C
PL2	PL-II 0 to 1390 °C
C	C(W/Re5-26) 0 to 2315 °C
Pr1	Pt100 -200.0 to 850.0 °C
JPr1	JPt100 -200.0 to 500.0 °C
Pr1C	Pt100 -200 to 850 °C
JPr1C	JPt100 -200 to 500 °C
Pr1 C	Pt100 -100.0 to 100.0 °C
Pr5 C	Pt100 -100.0 to 500.0 °C
K	K -328 to 2498 °F
K	K -328.0 to 752.0 °F
J	J -328 to 1832 °F
R	R 32 to 3200 °F
S	S 32 to 3200 °F
b	B 32 to 3308 °F
E	E -328 to 1472 °F
T	T -328.0 to 752.0 °F
N	N -328 to 2372 °F
PL2	PL-II 32 to 2534 °F
C	C(W/Re5-26) 32 to 4199 °F
Pr1	Pt100 -328.0 to 1562.0 °F
JPr1	JPt100 -328.0 to 932.0 °F
Pr1	Pt100 -328 to 1562 °F
JPr1	JPt100 -328 to 932 °F
Pr2	Pt100 -148.0 to 212.0 °F
Pr9	Pt100 -148.0 to 930.0 °F
420MA	4 to 20mA -2000 to 10000
020MA	0 to 20mA -2000 to 10000
10MV	0 to 10mV -2000 to 10000
-10MV	-10 to 10mV -2000 to 10000
50MV	0 to 50mV -2000 to 10000
100MV	0 to 100mV -2000 to 10000
1V	0 to 1V -2000 to 10000
05V	0.5 to 5V -2000 to 10000
15V	1 to 5V -2000 to 10000
010V	0 to 10V -2000 to 10000

Decimal point place	
0	No decimal point
00	1 digit after decimal point
000	2 digits after decimal point
0000	3 digits after decimal point

AT mode	
NoML	Normal mode
MULTI	Multi mode
– – – –	AT Cancel
AT	AT Perform

AT Perform/Cancel	
– – – –	AT Cancel
AT	AT Perform

Event output EV□ allocation	
000	No event
001	High limit alarm
002	High limit with standby
003	Low limit alarm
004	Low limit with standby
005	H/L limits alarm
006	H/L limit with standby
007	H/L limit range alarm
008	H/L limit range with standby
009	Process high alarm
010	Process high with standby
011	Process low alarm
012	Process low with standby
013	Pattern end output
014	Loop break alarm output
015	Output during AT

OUT2 cooling method	
AIR	Air cooling
oIL	Oil cooling
WAT	Water cooling

Direct/Reverse action	
HEAT	Reverse action
cooL	Direct action

Transmission output type	
PV	PV transmission
SV	SV transmission
MV	MV transmission

Communication protocol	
NoML	Shinko protocol
ModA	Modbus ASCII mode
ModR	Modbus RTU mode
SVT	SV digital transmission

Communication speed	
96	9600 bps
192	19200 bps
384	38400 bps

Data bit/Parity	
8NoN	8 bits/ No parity
7NoN	7 bits/ No parity
8EVN	8 bits/ Even
7EVN	7 bits/ Even
8odd	8 bits/ Odd
7odd	7 bits/ Odd

Stop bit	
1	1 bit
2	2 bits

Set value lock	
– – – –	Unlock
Lock	Lock

Program start Auto/Manual	
MANU	Manual start

Automatic start	
AUro	Automatic start

Program control start type	
PV	PV start
PVR	PVR start
SV	SV start

Power restore action	
SroP	Stops after power is restored
conT	Continues after power is restored
HoLd	Suspends after power is restored

Step time unit	
MI N	Hours:Minutes
SEc	Minutes:Seconds

Step time indication	
RT	Remaining time
TM	Step time

Step SV indication	
SV	SV corresponding to the step time progress
SrSV	Step SV

Step SV Hold function when program ends	
oN	Enabled

Not holding	
SroP	Not holding
HoLd	Holding

Time signal output TS1/Status (RUN)	
PV	PV start
T4	Time signal output TS1
RUN	Status output (RUN)

Time signal output TS2/Status (HOLD)	
T4	Time signal output TS2
HoLd	Status output (HOLD)

Time signal output TS3/Status (WAIT)	
T4	Time signal output TS3
WAI T	Status output (WAIT)

Time signal output TS4/Status (FAST)	
T4	Time signal output TS4
FAST	Status output (FAST)

Time signal output TS5/Status (STOP)	
T4	Time signal output TS5
SroP	Status output (STOP)

Overshoot suppression Enabled/Disabled	
oFF	Disabled
oN	Enabled

Output status when input errors occur	
oFF	Output OFF
oN	Output ON

PV color	
GRN	Green
RED	Red
oRG	Orange
ALGR	Alarm (EV1-EV4) ON: Green→Red
ALoR	Alarm (EV1-EV4) ON: Orange→Red
PVGR	PV color changes continuously
APGR	PV color changes continuously + Alarm (EV1-EV4) ON: Red

Auto/Manual control switch	
AUro	Automatic control
MANU	Manual control

Backlight selection	
ALL	All are backlit
PV	PV Display is backlit

*****   Inquiries   *****

For any inquiries about this unit, please contact our agency or the vendor where you purchased the unit after checking the following.

[Example]
- Model ------------------------------ PCA1R00-410
- Option ---------------------------- C, TS, TA
- Serial number ------------------- No. 165F05000

In addition to the above, please let us know the details of the malfunction, or discrepancy, and the operating conditions.
