

ACS-13A

Multiple functions in a compact case

Save space with the shortest depth (56 mm)

PV color changes in accordance with status

Setting & monitoring from your PC via USB communication cable

Controller with the shortest depth (56 mm)

Higher functions and performance have been achieved with the shortest depth of 56 mm ACS-13A. This provides cost and space reduction.

Point 2 An easier viewing display with status color indication

The PV display color can be selected from red, green and orange.

The PV display color can also change continuously depending on deviation between PV and SV, which allows easy and distinct status checking.

- 7 Types of PV Display Color
- · Regular status: Green Regular status: Red
- Regular status: Orange
- · Alarm OFF: Green, Alarm ON: Red · Alarm OFF: Orange, Alarm ON: Red Alarm ON: Red
- · PV color changes continuously :
- Orange → Green → Red · PV color changes continuously + Alarm ON (Red)

PV color continuous change mode

PV is higher than [SV+PV color range]

PV is lower than [SV-PV color range]

Alarm color (when setting High/Low limits alarm)

Low limit alarm active

Regular status

High limit alarm active

It is easier to see the SV and PV, using an 11-segment LCD display.

All segments lit

SENS

A1LM

Versatile controls, specifications and enhancements

4-point SV, using external selection (SM option) SV memory function, which can switch 4 points of SV using external contact signal, is equipped. After registering the SVs (from SV1 to SV4), they can be easily switched by external operation.

■3-phase Heater burnout alarm (W3 option)

Any trouble in 3-phase heaters such as burnout or deterioration can be detected by connecting 2 CTs (current transformers).

Heater burnout alarm types 20A and 50A are available for both single phase and 3-phase.

User friendly communication: Remote monitoring, data transmission

Standard Console communication function enables 1 to 1 communication between a PC with USB port and the ACS-13A. Various settings and monitoring can be performed using the Console software SWS-ACS01M. SWS-ACS01M is attached to the USB communication cable CMA (sold separately).

USB communication cable CMA

Displays of the Console software (SWS-ACS01M)

Serial Communication (RS-485) (C5 option)

Serial communication (RS-485) between a PC/Touch screen unit and the ACS-13A enables various settings and remote monitoring. A maximum of 31 units in a centralized control system can be established. Shinko protocol and Open Network Modbus protocol are usable.

0000000

When monitoring multiple ACS-13A units with a PC or Touch screen unit

By connecting to the Touch screen unit, up to 31 points of temperature control can be easily monitored. For a PC with RS-232C, a communication converter is required. Touch screen units corresponding to the ACS-13A are as shown below. Digital Electronics Corp.: SP series, GP series, LT series Hakko Electronics Co., Ltd.: V9 series, V8 series, TS series

Point. Standard Drip-proof/Dust-proof (IP66)

Can be used in a dust or water splashed environment.

•When communicating with a PLC and up to 32 units of the ACS-13A

By connecting to a PLC via PLC interface unit SIF-600, up to 32 units of the ACS-13A can be connected.

Output Rate-of-Change (Standard)

This function is suitable for heaters which are not designed for sudden changes in output. This is suited for controlling heaters such as the Kanthal Super. This also stabilizes control by suppressing output fluctuation.

■Name and functions of the sections.

- PV indicator : Lights when the PV is indicated in PV/SV display mode.
- 2 PV display : Indicates the PV (process variable).
- : Lights when the SV is indicated in PV/SV display mode. SV indicator
- 4 MEMO indicator: Lights when Set value memory external selection (SM option) is ordered.
- (5) MEMO display: Indicates the Set value memory number.
- : Indicates the SV (desired value). 6 SV display
- 7 Increase key : Increases the numeric value.
- Decrease key : Decreases the numeric value.
- 9 Mode key Selects a setting mode, or registers the set value. To register the set (selected) value, press this key.
- @ OUT/OFF key : Switches control output ON/OFF or Auto/Manual control function.
- (1) Action indicators
 - 01(0UT1): Lights when control output is ON, or when Heating output (D \square option) is ON.
- 02(0UT2): Lights when Cooling output (D \square option) is ON. EV1 : Lights when Alarm 1 output is ON.
- EV2 : Lights when Alarm 2 output (A2 option) is ON or when Heater burnout alarm (W, W3 option) is ON.
- : Flashes while AT (auto-tuning) or auto-reset is performing.
- : Lights when Serial communication (C5 option) is performing (TX output).
- LOCK: Lights when Lock 1, Lock 2 or Lock 3 is selected.
- (2) Console connector: The following operations can be conducted by connecting to the USB communication cable (Model: CMA, sold separately). (1) Reading and setting of SV, PID and various set values, (2) Reading of PV and action status, (3) Function change

Model

ACS-13A			Π,	\square , \square , \square	ACS-13A (W48×H48×D62mm)

				W3 (50A)	Rated current: 3-phase 50A Alarm		

Designate the specification from the
columns.

*For the power supply voltage, 100 to 240V AC is standard, however, when ordering 24V AC/DC, enter "1" after the input code.

When ordering options, punctuate them with a comma.

If A2 option is specified, DR or DS option cannot be ordered.

- If If C5 option is specified, SM option cannot be ordered.
 If If D□ option is specified, A2, W or W3 option cannot be ordered.
 If W or W3 option is specified, DR or DS option cannot be ordered.
 For direct current output type, W or W3 option cannot be ordered.

+ side terminal number differs depending on the voltage input.)

TC Thermocouple input

CT1 CT input 1 (W, W3 option)

RTD input

CT2 CT input 2 (W3 option)

DI Contact input (SM option)

RS-485 Serial communication RS-485 (C5 option)

- This controller does not have a built-in power switch, circuit breaker and fuse. It is necessary to install a power switch, circuit breaker and fuse near the controller.
- For a 24 V AC/DC power source, do not confuse polarity when using direct current (DC).

Solderless terminal

Use a solderless terminal with an insulation sleeve in which an M3 screw fits. Tightening torque should be 0.63 N \cdot m.

■External dimensions (Scale: mm)

■Wiring example

■Panel cutout (Scale: mm)

TCT dimensions (Scale: mm)

■Console software SWS-ACS01M included

Using the Console software (SWS-ACS01M) with an USB communication cable CMA (sold separately), parameters setting, logging and monitoring of the controller can be performed by connecting to the USB port of the PC.

■USB communication cable CMA (Sold Separately) (Scale: mm)

• To ensure safe and correct use, thoroughly read and understand the manual before using this instrument.

installed between electromagnetic coils.

- This instrument is intended to be used for industrial machinery, machine tools and measuring equipment. Verify
 correct usage after purpose-of-use consultation with our agency or main office. (Never use this instrument for
 medical purposes with which human lives are involved.)
- External protection devices such as protective equipment against excessive temperature rise, etc. must be installed, as malfunction of this product could result in serious damage to the system or injury to personnel. Proper periodic maintenance is also required.
- This instrument must be used under the conditions and environment described in the manual. Shinko Technos Co., Ltd. does not accept liability for any injury, loss of life or damage occurring due to the instrument being used under conditions not otherwise stated in the manual.

Caution with respect to Export Trade Control Ordinance

To avoid this instrument from being used as a component in, or as being utilized in the manufacture of weapons of mass destruction (i.e. military applications, military equipment, etc.), please investigate the end users and the final use of this instrument. In the case of resale, ensure that this instrument is not illegally exported.
